DIVIDE
THE NEXT GENERATION OF ENTERPRISE MOBILITY

Divide® creates an entirely separate, secure and cloud-managed workspace on an employee's personal mobile phone or tablet. This unique approach ensures enterprise security and control without compromising personal freedom and privacy for the employee. Administrators can seamlessly extend existing business services and deploy 3rd party apps. Divide is the next generation of enterprise mobility and the perfect solution to BYOD.

Provide Total Enterprise Security

Divide creates a secure workspace on employee devices leveraging FIPS 140-2 validated encryption to protect against unauthorized access, malware, and data leakage. Divide's cloud-based remote management console enables monitoring and management of all connected devices, including enforcing group-based policies, remotely wiping corporate data, locking the corporate profile and enforcing password resets.

Support Any Device

Divide is readily deployable to any employee-owned smartphone or tablet on Android 2.3+ and iOS 6.0+, maximizing employee choice and eliminating the need to certify individual devices. Divide eases the management burden on both IT and employees by replacing full device management with a standardized, controllable environment across all connected devices.

Extend Existing Business Services

Divide's open and fully extensible platform enables the enterprise to integrate existing business services like VPN and cloud-storage directly with its mobility strategy down to the mobile device. The ability to seamlessly add or remove services with no impact to the end user keeps the enterprise in control of a future-proof platform.

Keep Employees Productive and Satisfied

Divide offers a set of feature rich, easy to use business-class apps that are designed to preserve the native device experience, giving employees all the tools they need to stay productive and a user interface they prefer. Companies can also deploy any existing business apps to employee devices.

Reduce Total Cost of Ownership

Divide eliminates the need for corporate liable phones in the enterprise and provides instant and extensive scalability to BYOD strategies. Divide is licensed per user and deployed via the cloud with no infrastructure cost.

Data Security

- Encrypted application databases
- Screenlock enforcement
- Remote device wipe (workspace only)
- Enterprise data inaccessible to personal apps
- Device timebomb (passive wipe)
- Copy/paste restrictions
- Data leakage prevention
- Anti-tamper (root and debugger) support
- Customizable remote wipe policies
- S/MIME email encryption

Enterprises Apps

- Mail / Calendar / Contacts
- Tasks / Browser / Files / Dialer / Messenger
- Application deployment

Mobile Device Management

- Cloud-based remote management console
- Group-based policy management
- Touchless over-the-air configuration and policy updates
- Multiple devices per user
- Secure enterprise application management
- Roaming management
- Corporate branding
- Fully compatible with other MDM platforms

About Divide

Divide helps organizations and individuals get the most out of mobile technology and corporate BYOD strategies. The company's management team consists of executives and engineers that have led mobility, encryption and security initiatives in world-class banking and security companies. Divide is headquartered in New York City, with offices in London and Hong Kong.

HEADQUARTERS
