

B.TECH.
(AGRICULTURAL
ENGINEERING)
COURSE
DESCRIPTION
WITH
COURSE OUTCOMES

COURSE CONTENT

FIRST YEAR B.TECH. (I SEMESTER)

BS 111 MATHEMATICS – I

Expand function in Taylor's and Maclaurin's series. The student will be able to apply the partial differentiation to compute the minima and maxima of functions of two variables. The student will be able to compute areas and volumes by integration. Solve linear differential equations of higher order and homogenous differential equations with constant coefficients.

Cr. Hrs. 3 (3 + 0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Differential Calculus : Taylor's and Maclaurin's expansions. Asymptotes and Curvature (Cartesian Coordinates only). Curve tracing (Cartesian and standard Polar Curves-Cardioids, Lemniscates of Bernoulli, Limacon, Equiangular Spiral).

Unit-II

Differential Calculus : Partial Differentiation, Euler's Theorem on Homogeneous Functions. Maxima & Minima of Two Independent Variables. Lagrange's Method of Multipliers. Jacobians.

Unit-III

Integral Calculus : Double Integral, Areas & Volumes by Double Integration. Change of Order of Integration. Triple integrals. Beta Function and Gamma Function (Simple Properties), Relation between Beta and Gamma functions.

Unit-IV

Differential Equations : Linear Differential Equations of Higher Order with constant coefficients. Homogeneous Linear Differential Equations with constant coefficient.

Text Books/References

1. Guar, Y.N. and Koul, C.I. (2013) Engineering Mathematics, Vols. I & II, Jaipur Publishing House, Jaipur.
2. Babu Ram (2011) Engineering Mathematics-I, Pearson Education, India.
3. B.V. Ramana (2012) Higher Engineering Mathematics, Tata McGraw Hill, India.
4. J.L. Bansal and H.S. Dhama (2012) Differential Equations, Vols. I & II, Jaipur Publishing House, Jaipur.
5. M.Ray and Chaturvedi: A Text Book of Differential Equations, Student Friend & Co. Publisher, Agra.

ME 113 MECHANICAL ENGINEERING

Cr. Hrs. 3 (3 + 0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Thermodynamics: Thermodynamic properties, closed and open systems, flow and non-flow processes, gas laws, laws of thermodynamics, internal energy. Application of First Law in heating and expansion of gases in non-flow processes only.

Second law of thermodynamics: Kelvin-Planck and Clausius statements. Reversible processes, Carnot cycle, Carnot theorem. Reverse Carnot cycle. Entropy, physical concept of entropy.

Unit-II

Properties of Steam: Difference between gas and vapour, change of phase during constant pressure process. Generation of Steam, triple point and critical point. Internal energy and entropy of steam. Use of steam tables and Mollier chart, heating and expansion of vapour in non-flow processes.

Unit-III

Vapour Power Cycles: Introduction to Carnot Cycle. Rankine cycle and modified Rankine cycle.

Steam Generators : Classification of steam boilers. Cochran, Lancashire, Locomotive and Babcock-Wilcox boilers. Boiler mountings and accessories.

Steam Engines: Introduction to simple and compound steam engines.

Unit-IV

Gas Power Cycles: Introduction. Air Standard efficiency, other engine efficiencies and terms. Otto, diesel and dual cycles. Calculation of efficiency, mean effective pressure and their comparison.

Internal Combustion Engines: Introduction, Classification, terminology and description of IC Engines. Four stroke and two stroke petrol, gas and diesel engines. Comparison of petrol and diesel engines. Simple carburettor.

Text Books/References

1. M. L. Mathur and F. S. Mehta. Thermal Engineering, (Vol. I, SI Edition), Jain Brothers, New Delhi.

2. R. K. Purohit : Foundation of Mechanical Engineering; Scientific Publishers (INDIA), Jodhpur.
3. P.K. Nag : Engineering Thermodynamics, TMH.

ME 114 WORKSHOP PRACTICE

Cr. Hrs. 1 (0 + 1)

	L	T	P
Credit	0	0	1
Hours	0	0	3

Carpentry Shop: Acquaintance with types of wood, tools and their uses. Simple exercises involving basic operations like sawing, planning, chiselling, etc. Preparation of simple joints, cross half lap joint, dovetail joint, bridle joint, tennon and mortise joint.

Smithy Shop: Acquaintance with types of tools and their uses. Simple exercises involving basic operations like bending, drawing, punching, shaping, upsetting, and riveting.

Fitting Shop: Acquaintance with tools, measuring and marking tools, precision measuring tools and their uses. Simple exercises involving basic operations like sawing, chipping, filling, drilling, reaming, threading with taps and dies.

Sheet Metal and Plumbing Shop: Demonstration of basic tools, pipe fittings and operations.

Texts/References

1. S. K. Hajra Choudhury and AK Hajra Choudhury. Elements of Workshop Technology (Vol. I), Media Promoters & Publishers Pvt. Ltd., Bombay.

CE 115 ENGINEERING DRAWING

Select, Construct and Interpret appropriate drawing scale as per the situation. Draw simple curves like ellipse, cycloid and spiral. Draw Orthographic projections of points, lines and planes. Draw orthographic projection of solids like cylinders, cones, prisms and pyramids including sections. Layout development of solids for practical situations. Draw isometric projections of simple objects.

Cr. Hrs. 1 (0 + 1)

	L	T	P
Credit	0	0	1
Hours	0	0	3

Introduction and letter writing. Construction and use of plain, diagonal and vernier scale. Methods of drawing ellipse, parabola and hyperbola. Methods of drawing cycloids, spirals. Orthographic projection and projection of points.

Projection of lines, projection of planes, projection of solids. Introduction of prism, pyramid, cylinder and cone.

Section of solids, introduction of intersection of surfaces. Development of plane and curved surface. Isometric projection.

Text/Reference

1. N.D. Bhatt. Elementary Engg. Drawing, Rupalee publication, Anand.
2. Lakshmi Narayan and Vaishwanar. A Text Book of Practical Geometry, Jain Brother, New Delhi.
3. R.B. Gupta. A Text Book of Engineering Drawing, Satry Prakashan, New Delhi.
4. Fundamentals of Technical Drawing, Parkinson.

BS 100P ENGINEERING PHYSICS

Apply vector calculus approach to problems in electric field and magnetic field. Apply laws of physics to simple LRC circuits. Learn physics behind various types of lasers and their characteristics. Understand the interference and diffraction from wave optics concepts and know its applications. Understand polarization of light and its applications.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Electric Field: Line integral of electric field, Potential difference, Field as gradient of potential, Divergence of a vector function, Differential form of Gauss's law, Laplacian, Laplace equations, Curl of a vector function. Gauss's divergence theorem.

Magnetic Field: Curl and Divergence of a magnetic field, Magnetic scalar and vector potential.

Unit-II

Varying Field: Faraday's law-integral and differential form, Self and mutual inductance, Neumann's equation, Charge and discharge of a capacitor through register, Growth and decay of current in LR circuit, Energy stored in electric and magnetic field, Displacement current, Maxwell's equations.

Unit-III

Laser: Coherence, Einstein's coefficient, Spontaneous and stimulated emission, Population inversion, Laser gain (pumping), Spectral narrowing in laser, Coherence length, Ruby and He-Ne laser.

Interference: Division of amplitude, colour of thin films, Newton's ring, Febyr-Perot interferometer-principle, operation, determination of wave length and difference in wave length.

Unit-IV

Diffraction: Double slit Fraunhofer diffraction pattern, Fraunhofer diffraction by a plane transmission grating, Formation of spectra.

Polarization: Analysis of linearly, circularly and elliptically polarized light (Half wave and quarter wave plates), Optical activity, specific rotations, Laurent's half shade and its use for determination of specific rotation of sugar solution.

Practicals

1. To find refractive index and dispersive power of material of prism by spectrometer.
2. To find wave length of light by Newton's ring.
3. To find wave length of light by diffraction grating.
4. To find specific rotation of sugar solution by polarimeter.
5. To find wave length of light by Fresnel Biprism.
6. To find frequency of A.C. mains.
7. To determine dielectric constant of liquid using series resonance method.
8. To study charge and discharge of condenser through a resistor (C.R. Circuit).
9. To study LCR resonant circuit, resonance, quality factor and sharpness in (i) series circuit (ii) parallel circuit.

Text Books/References

1. K.K. Tiwari. (1995). Electricity and Magnetism, S. Chand and Company, New Delhi.
2. N. Subrahmanyam and Brijlal. (1993). A Text Book of Optics, S. Chand and Company, New Delhi.
3. Ahmed and Lal. (1966). Electricity, Magnetism and Electronics, Unitech House, Lucknow.
4. D.S. Mathur. (1993). Mechanics, S. Chand and Company, New Delhi.
5. Gupta and Kumar. (1995). Practical Physics, Pragati Prakashan, Meerut.

CE 100 ENGINEERING MECHANICS

Draw free body diagrams and determine the resultant of forces and/or moments. Determine the centroid and second moment of area of sections. Apply laws of mechanics to determine efficiency of simple machines with consideration of friction. Analyse statically determinate planar frames. Analyse the motion and calculate trajectory characteristics. Apply Newton's laws and conservation laws to elastic collisions and motion of rigid bodies.

Cr. Hrs. 3 (2 + 1)

(A) STATICS

Unit-I

Introduction of condition of equilibrium: Force, system of force, coplanar forces.

Moment and couples: Moment and parallel forces, Couples, General conditions of equilibrium

Practical Applications: Levers, Cracked levers, Steel yards. Sagging chains and toggle joints.

Centre of Gravity: Centre of parallel forces, C.G. in some simple cases, C.G. of Solids.

Moment of Inertia: Moment of inertia, Radius of gyration and perpendicular axis. Determination of moment of inertia of simple sections. Mass of moment of inertia.

Unit-II

Friction: Introduction, Critical angle of friction, Friction on horizontal planes, Friction on inclined planes, Wedge and block, Screw jacks, Rolling friction.

Machines: Introduction, Effects of friction, Loss of work, Reversible and irreversible machine, Law of machine, Wheel and axle, Differential wheel and axle, Pulley block, Screw jack, Single and double purchase crab, Worm and Worm wheel, System of pulleys.

Frames: Statically determinate plane frames, Method of joints, Method of sections, Graphical method.

(B) DYNAMICS

Unit-III

Rectilinear Motion, Motion under gravity, Projectiles equation of the path, Maximum height attained, Time of flight, Horizontal range. Angle of projection, Projectile from a given height, Projectile on an inclined plane, Problems.

Work, Power and Energy: Work, Power, Work done by torque, Energy, Law of conservation.

Unit-IV

Centripetal and centrifugal forces, Laws of motion: Newton's Law of motion and their explanation, Collision of elastic bodies; Impulse and impulsive force, Principle of conservation of momentum, Loss of kinetic energy during impact.

Practicals

1. Verification of law of polygon of forces.
2. Verification of principle of moment in case of compound level.
3. Verification of principle of moment in case of bell crack level.

4. Determination of reaction in case simply supported beam with or without overhang.
5. To determine coefficient of friction between different surfaces on horizontal plane.
6. To determine coefficient of friction between different surfaces in inclined plane.
7. Study of different wheel and Axle.
8. Study of single purchase crab.
9. Study of worm and worm wheel.
10. Study of Weston's pulley block.
11. Determination of mechanical advantage, velocity ratio and efficiency of single purchase crab.
12. Determination of mechanical advantage, velocity ratio and efficiency of double purchase crab.
13. Determination of mechanical advantage, velocity ratio and efficiency of first system of pulley.
14. Determination of mechanical advantage, velocity ratio and efficiency of second system of pulleys.
15. Determination of mechanical advantage, velocity ratio and efficiency of third system of pulleys Flywheel.

Text Books/References

1. I.B. Prasad. Engineering Mechanics, Khanna Publisher, New Delhi.
2. R.S. Khurmi. Applied Mechanics, S. Chand & Company Ltd., New Delhi
3. S.B. Junnarkar. Applied Mechanics, Charotar Publishing House, New Delhi.
4. Saluja. Applied Mechanics, Satya Prakashan, New Delhi.

EE 100 ELECTRICAL ENGINEERING – I

Solve DC networks. Apply fundamentals to solve the single phase AC circuits. Solve three phase AC circuit problems. Apply principles to determine parameters for single phase transformer. Identify and select appropriate type of instrument for measurement of electrical quantities.

Cr. Hrs. 4 (3 + 1)

	L	T	P
Credit	3	0	1
Hours	3	0	2

Unit-I

D.C. Networks: Kirchoff's law, node voltage and mesh current methods, delta-star and star delta transformation, source conversion; solution of DC circuits by network theorems: Thevenin's, Norton's, superposition, Reciprocity and Maximum Power Transfer theorem.

Unit-II

Single Phase A.C.Circuits : Single Phase EMF generation, average and effective values of sinusoidal and linear periodic wave forms, instantaneous and average power, power factor, reactive & apparent power, solution of R-L-C, series, parallel, series-parallel circuits, complex representation of impedances, phasor diagram, series and parallel resonance.

Unit-III

Three Phase A.C., Circuits : Three phase EMF generation, delta and star-connection, line and phase quantities, solution of the 3- phase balanced circuits, Phasor diagram, measurement of power in three phase balanced circuits.

Transformer: Faraday's laws of Electromagnetic induction, construction and principle operation of single phase transformer, EMF equation, voltage and current relationship and Phasor diagram for ideal transformer.

Unit-IV

Electrical Measuring Instruments : Introduction; type of measuring Instruments, Deflecting controlling & Damping Torque, D.C. PMMC instruments, shunts and multipliers, Moving iron ammeters and voltmeter, Dynamometers wattmeter, Induction type energy meter.

Practicals :

Based on theory

Text Books/References

6. J.B. Gupta. (2002). Fundamentals of Electrical & Electronics. S.K. Kataria and Sons. Dehli.

ENVS 100 ENVIRONMENTAL STUDIES

Develop an understanding of different natural resources including renewable resources. Realize the importance of ecosystem and biodiversity for maintaining ecological balance. Develop an understanding of environmental pollutions and hazards due to engineering/technological activities and general measures to control them. Demonstrate an appreciation for need for sustainable development and role of science. Aware of important acts and laws in respect of environment.

Cr. Hrs. 2(2 + 0)

**L T P
Credit 2 0 0**

Unit-I*The Multidisciplinary nature of environmental studies:*

Definition, scope and need for public awareness. Environmental problems and their consequences

Natural Resources:

Renewable and non-renewable resources

Natural resources and associated problems

- a) Forest resources: Use over-exploitation, deforestation, and case studies. Timber extraction, mining, dams and their effects on forests and tribal people.
- b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams, benefits and problems.
- c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.
- d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer- pesticide problems, water logging, salinity, case studies.
- e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies.
- f) Land resources: Land and a resource, land degradation, man induced landslides, soil erosion and desertification.

Role of an individual in conservation of natural resources, Equitable use resources for sustainable lifestyles.

Unit-II*Ecosystems*

Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids, Introduction, types, characteristic features, structure and function of the following ecosystem.

- a. Forest ecosystem
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Biodiversity and its conservation

Introduction – Definition: genetic, species and ecosystem diversity, Biogeographically classification of India, Value of biodiversity: Consumptive use, productive use, social, ethical, and aesthetic and

option values, Biodiversity at global, National and local levels, India as a mega-diversity nation, Hot spots of biodiversity, Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

Unit-III

Environmental Pollution

Definition, Causes, effects and control measures of: -

Air pollution

Water pollution

Soil pollution

Marine pollution

Noise pollution

Thermal pollution

Nuclear hazards

Solid waste Management: Causes, effects and control measures of urban and industrial wastes, Role of an individual in prevention of pollution, Pollution case studies, Disaster management: floods, earthquake, cyclone and landslides.

Unit-IV

Social Issues and the Environment - From Unsustainable to Sustainable development, Urban problems related to energy, Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation of people: its problems and concerns, Case studies, Environmental ethics: Issues and possible solutions, Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies, Wasteland reclamation, Consumerism and waste products, Environment Protection Act, Air (Prevention and Control of Pollution) Act, Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation, Public awareness.

Human Population and the Environment

Population growth, variation among nations, Population explosion- Family Welfare Programme, Environment and human health, Human Rights, Value Education, HIV/AIDS, Women and Child Welfare, Role of Information Technology in Environment and human health, Case Studies.

Text Books/References

7. R. K. Trivedi and P. K. Goel. Introduction to Air Pollution, Techno Science Publications.

BS 100C ENGINEERING CHEMISTRY

Demonstrate knowledge of science behind common impurities in water and methods to treat them. Knowledge of methods to determine the calorific value of fuels, perform flue gas analysis and combustion analysis. Apply the science for understanding corrosion and its prevention. Demonstrate a knowledge of superconducting and organic electronic materials.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Sources of water, common impurities, requisites of drinking water in municipal water supply. Purification of water, sterilization, break point chlorination. Hardness, determination of hardness by Complexometric (EDTA) method, degree of hardness, Boiler troubles, carry over corrosion, Sludge and scale formation. Caustic embrittlement, cause of boiler troubles and their prevention.

Unit-II

Classification of fuels, solid fuels, Proximate and Ultimate analysis of coal, significance of constituents, theoretical method for calculation of Gross and net calorific values. Liquid fuels- Petroleum origin, Refining of Petroleum, knocking, octane number, anti knocking agents. Flue gas analysis by Orsat Apparatus, Calculations based on combustion.

Unit-III

Corrosion : Definition and its significance, Dry and Wet theories of corrosion, Cathodic & Anodic protection of corrosion, types of corrosion, factors affecting corrosion.

New Engineering Materials: Introduction, Properties and Applications of Super Condcutors, Organic electronic materials, Fullerenes.

Unit-IV

Chemical Kinetics: Order and Molecularity of reaction, first and second order reaction, Derivation of equations for first and second order reaction, determination of order of reaction, Energy of activation and Arrhenius equations, Numerical of first and second order reactions.

Engineering Chemistry Practical

1. Determination of viscosity of a liquid.
2. Estimation of free chlorine in a water sample.
3. Determination of temporary and permanent hardness by EDTA method.
4. Determination of Copper Sulphate iodometrically.
5. Estimation of Potassium dichromate iodometrically.
6. Determination of purity of Ferrous Ammonium Sulphate (Mohr's Salt) using Potassium Permanganate.
7. Estimation of available chlorine in Bleaching Powder sample.
8. Analysis of Brass.
9. Determination of Strength of Ferrous Ammonium Sulphate (FAS) using Potassium Ferricyanide as an external indicator.
10. Analysis of Common Salt.

5. M.M. Uppal. A Text Book of Engineering Chemistry, Khanna Publishers, New Delhi.
6. S.S. Dara. A Text Book on Experiments and Calculations in Engg. Chemistry, S. Chand & Co., New Delhi.
7. Ameta and Yasmin. Practical Engineering Chemistry, Himanshu Publications, New Delhi.

EC 100 ELECTRONICS AND INSTRUMENTATION

Characterize passive electronic components. Characterize diodes and transistors. Give a simple circuits for amplifiers and oscillators. Design power supplies with regulated output. Identify and select appropriate type of transducer for measurement of different quantities.

Cr. Hrs. 4 (3 + 1)

	L	T	P
Credit	3	0	1
Hours	3	0	2

Unit-I

Passive Components: Construction and characteristics of carbon composition , wire wound and film resistors. Potentiometer, color codes and rating of resistors. Characteristics and rating of capacitors for electronics circuits.

Semi conductor: Basic electrical characteristics of semi conductors. Theory of p-n junction. Characteristics and ratings of junction diodes.basics of zener diode, photo diode and LED.

Unit-II

Bipolar Junction Transistor: npn and pnp transistors,, Various configurations (CB, CC,CE) of BJT. Transistor biasing (Fixed, self, potential dividers) Basic classification of amplifier (Voltage and power amplifier). Basic concept of Class A, B , AB and C amplifiers.

Unit-III

Generation of waveforms: Concept of positive and negative feedback. Introduction of oscillators like R-C , L-C and Crystal oscillators.

Power supply: Circuit configuration and analysis of Half wave , Full wave and Bridge rectifier .Basic concept of regulation, Zener diode voltage regulator.,Transistor serier regulator.

Unit-IV

Transducers: Definition, classification : Active and passive transducer, primary and secondary transducers, Analog and digital transducers. Measurement of displacement, temperature, velocity, force and pressure using potentiometer, resistance thermometer, thermocouples, bourden tube, LVDT, strain gauge and techogenerator.

Practicals

Based on theory

Text Books/References

1. Millman and Halkias. Integrated electronics: Mc Graw Hill
2. W.D Cooper. Electronics Instrumentation and Measurement : PHI
3. M.L.Gupta. Electrical Engineering Materials

5. Jhon D. Ryder. Electronics Fundamentals

CS 100 INTRODUCTION TO COMPUTER PROGRAMMING AND DATA STRUCTURE

Understand the basic building blocks of a computer. Learn different systems and codes to represent numbers in computers and be able to convert the numbers from one system to another. Learn the data types and syntax of C language. Write, compile and execute programs in C language for solving engineering problems. Demonstrate capability to choose appropriate type of data structures and perform operations on them.

Cr. Hrs. 4 (3 + 1)

	L	T	P
Credit	3	0	1
Hours	3	0	2

Unit-I

Computer Fundamentals: History of Computers; Organization of Computers: input unit, output unit, Storage Unit, Arithmetic Logic Unit, Central Processing Unit; CPU Operation; Memory Subsystem: RAM, ROM, Cache Memory & memory Hierarchy; Instruction Format and Instruction Execution Cycle; Number System & Codes: Binary, Decimal, Octal & Hexadecimal Number System, Conversion from one number system to another, sign magnitude, 1's Complement & 2's Complement representation of numbers; Numerical & Character codes: BCD, Excess-3, Gray, ASCII & EBCDIC Codes.

Unit-II

Basics of Programming in C: Constants, Variables and Data Types, Operators and Expressions, Input and Output operations, Decision making & Branching: if-else, switch statement; Decision making and looping; Arrays.

Unit-III

Character Arrays & strings, User defined function, Structures & Unions, Pointer Management, Dynamic Memory allocation & linked lists.

Unit-IV

Introduction to Data Structures : Introduction to Linear Arrays & Representation of Linear Array in Memory, Traversing, Insertion & Deletion in Linear arrays, Bubble Sort, Linear & Binary search; Introduction to linked list – Representation of linked list in memory, Traversing, Searching, Insertion & Deletion in a linked list.

Practicals

Based on Theory

Text Books/References

1. E. Balagurusamy. "Programming in ANSI C", Tata McGraw Hill.
2. Kernighan and Ritchie. "The C Programming language", Printice Hall

BS 100E ENGLISH AND COMMUNICATION SKILLS

Understand basic grammar principles and be able to synthesise and transform sentences. Write CVs, letters for job application, complaints and emails. Prepare technical reports and short essays. Learn phonetic symbols and use correct sound, stress and intonation. Learn basic do's and don'ts of an interview. Show enhance communication ability in English.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Grammar and Usage : Tense, Concord, Preposition, Common Grammatical Errors, Phrasal Verbs, Idioms, Words often misused, Synthesis of sentences, Transformation of Sentences (Simple, Compound, Complex, Voice, Speech). Analysis of sentences.

Unit-II

Comprehension-Unseen passage.

Composition : Business Letters, E-mail, Memos, Circular, Notice, Curriculum Vitae and Covering Letter, Writing of Technical Report, Essay Writing.

Unit-III

Phonetic Symbols and Transcription, Word Stress. Meaning and Characteristics of Seminar, Conference, Symposium and Work-Shop. Interview – Meaning, Types, Do's and Don'ts of Interviews.

Unit-IV

Communication Skills : Meaning and Process of Communication, Basic Forms of Communication, Verbal and Non-Verbal Communication, Communication Barriers, Principles of Effective Communication.

Language Lab Practical

Globerana Software : Listening skills, Fundamental language skills, Communication skills, Vocabulary, Phonetics, Conversation.

Group discussion on current topics, Oral presentations, Writing skills, Exercises on pronunciation.

FIRST YEAR B.TECH. (II SEMESTER)

BS 121 MATHEMATICS – II

Show knowledge of vector calculus and its applications in engineering. Solve second order differential equations for application in their field of engineering. Solve partial differential equations of first order and higher orders (with constant coefficients). Solve simultaneous equations by matrix methods. Determine eigenvalues and eigenvectors. Diagonalise a matrix and invert a matrix.

Cr. Hrs. 3 (3 + 0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Vectors Calculus : Scalar and Vector field. Differentiation of vector functions, Gradient, Divergence, Curl and Differential Operator. Integration of vector functions, Line, Surface and volume Integrals. Green's Theorem in a Plane, Gauss' and Stoke's Theorem (without proof) and their Applications.

Unit-II

Differential Equations : Second Order Ordinary Differential Equations with Variable Coefficients. Exact Forms. Part of Complementary Function is known. Change of Dependent Variable. Change of Independent Variable, Normal Forms. Method of Variation of Parameter.

Unit-III

Partial Differential Equations : Formation of partial differential equations. Partial Differential Equations of First Order, Lagrange's Form, Standard Forms Higher order linear partial differential equations with constant coefficients.

Unit-IV

Matrices: Rank of a matrix, Inverse of a matrix by elementary transformations. Consistency and Solution of simultaneous linear equations. Eigen values and Eigen vectors, Cayley-Hamilton theorem (without proof). Diagonalization of matrix.

Text Books/References

1. Guar, Y.N. and Koul, C.I. (2013) Engineering Mathematics, Vols. I & II, Jaipur Publishing House, Jaipur.
2. Babu Ram: Engineering Mathematics-I, Pearson Education, India (2011).
3. B.V. Ramana (2012) Higher Engineering Mathematics, Tata McGraw Hill, India.

4. J.L. Bansal and H.S. Dhani (2012) Differential Equations, Vols. I & II, Jaipur Publishing House, Jaipur.
5. M.Ray and Chaturvedi: A Text Book of Differential Equations, Student Friend & Co. Publisher, Agra.
6. Rao V. Dukkipati (2012) Engineering Mathematics, New Age International (P) Ltd., New Delhi.

CE 122 CIVIL ENGINEERING

Demonstrate knowledge of various surveying methods. Conduct a chain survey. Conduct a compass survey. Conduct levelling survey and be able to do RL calculations. Demonstrate knowledge of properties of various building materials.

Cr. Hrs. 2 (1 + 1)

	L	T	P
Credit	1	0	1
Hours	1	0	2

(A) SURVEYING AND LEVELING

Unit-I

Principle and purpose of plane surveying.

Chain Surveying : Instrument for chaining, Direct & indirect ranging. Methods of chain along plane & sloping ground, Base line, check line, Tie line, Offset, Chain angle & recording in field book.

Compass Surveying : True & Magnetic meridian, whole circle bearing & quadrantal bearing system, construction & use of Prismatic & Surveyor Compass, Local attraction.

Unit-II

Level and leveling : Definition of various terms used in leveling. Types of Bench mark and their uses. Construction and use of Dumpy and Tilting levels, Leveling staves. Temporary adjustment of Dumpy level. Simple, differential leveling, fly leveling, longitudinal and cross sectioning, plotting of profile leveling. Determination of level by line of collimation and rise and fall method, Arithmetical checks. Level book and record keeping, leveling difficulties and errors in leveling.

(B) BUILDING MATERIAL

Unit-III

Stones: Different types, properties of good building stones, common testing of stones, Dressing of stones and use of stones in construction.

Bricks: Types, raw materials, identification, composition. Properties and uses of ordinary bricks, fire resistant and chemical resistant bricks.

Limes: Definition, sources of lime, slaking of lime, ISI classification of lime.

Unit-IV

Cement: Chemical composition, types of cement, properties, uses and tests on cement.

Mortars: Proportioning, properties of ingredients and use of lime, cement and gauge mortars.

Cement Concrete: Ingredients, common proportions, properties of fresh hardened concrete, Water cement ratio, curing and consolidation of concrete.

Practicals

1. Study of accessories used in measurement of distances.
2. Ranging Direct and indirect and use of chain and tape.
3. Chining along sloping ground.
4. Chain surveying, field book recording and taking offsets for location details.
5. Study of prismatic and surveying compass and taking bearings.
6. Study of Dumpy level, temporary adjustment and R.L. calculations.
7. Study of Tilting level, temporary adjustment and R.L. calculations.
8. Simply and differential leveling operation, record in level book, practice for staff reading line of collimation and Rise and fall method calculations.
9. L-section and cross sectioning, fly leveling operation.
10. Plotting of working profile.

ME 123 MACHINE DRAWING – I

Cr. Hrs. 1 (0 + 1)

	L	T	P
Credit	0	0	1
Hours	0	0	3

Introduction, conventional representation of different materials used in machine drawing, Introduction to BIS codes.

Orthographic Projection: First and third angle methods of projection. Preparation of working drawing from models and isometric views. Drawing of missing views.

Dimensioning: Different methods of dimensioning.

Sectional Views: Concept of sectioning. Revolved and oblique section. Sectional drawing of simple machine parts

Riveted and Welded Joints: Types of rivet heads and riveted joints. Processes for producing leak proof joints. Symbols for different types of welded joints.

Screw Fastenings: Nomenclature, thread profiles, multistart threads, left and right hand threads. Square headed and hexagonal nuts and bolts. Conventional representation of threads. Different types of lock nuts, studs, machine screws, cap screws and wood screws. Foundation bolts.

Different types of joints: Knuckle joint, cotter joint and universal joint.

Text Books/References

1. N. D. Bhatt. Machine Drawing, Charotar Book Stall, Anand.
2. V. Laxminarayan and ML Mathur. A Text Book of Machine Drawing, Jain Brothers, New Delhi.
3. P. S. Gill. Machine Drawing: S. K. Kataria & Sons, New Delhi.

ME 124 WORKSHOP TECHNOLOGY

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	3

Unit-I

Welding: Introduction to types of welding; Principle of Electric arc welding, welding tools and safety devices, welding positions, welding joints, types of welds, Resistance welding, Oxyacetylene gas welding, types of flames, Soldering and Brazing.

Unit-II

Lathes: Constructional details of centre lathe. Main operations and tools used on centre lathes.

Shaper: Types of shapers. Constructional details of standard shaper, shaper tools and main operations.

Unit-III

Drilling Machines: Types of drilling machines. Constructional details of pillar type and radial drilling machines. Main operations. Twist drills, drill angles and sizes.

Forming : Basic descriptions and applications of hot and cold working processes, forging, bending, shearing, drawing and forming operations.

Unit-IV

Foundry & Casting Practice : Introduction, types of patterns, mouldings, moulding Materials, cores, moulding tools and equipments. Moulding sands, properties of moulding sands. Casting defects.

Casting methods : Permanent mould casting, investment casting.

Practicals

Practical exercises on welding, pattern making, foundry and machining operations.

Text Books/References

1. Mathur, Mehta and Tiwari : Elements of Mechanical Engineering, Jain Brothers, New Delhi.
2. S.K. Hajra Choudhury and A.K. Hajra Choudhury. Elements of Workshop Technology (Vol. I and II), Media promoters & Publishers Pvt. Ltd., Bombay.

SECOND YEAR B.TECH. (III SEMESTER)

BS 211 (All Branches) MATHEMATICS – III

Learning Different Types Of Interpolation Formulas. Gaining Knowledge About Various Operators, Their Properties And Applications. Getting Knowledge Of Laplace Transform , Which Is Useful For Differential Equations.

Cr. Hrs. 3 (3 + 0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Interpolation: Finite differences, various difference operators and their relationships, factorial notation. Interpolation with equal intervals; Newton's forward and backward interpolation formulae, Lagrange's interpolation formula for unequal intervals.

Unit-II

Gauss forward and backward interpolation formulae, Stirling's and Bessel's central difference interpolation formulae.

Numerical Differentiation: Numerical differentiation based on Newton's forward and backward, Gauss forward and backward interpolation formulae.

Unit-III

Numerical Integration: Numerical integration by Trapezoidal, Simpson's rule.

Numerical Solutions of Ordinary Differential Equations: Picard's method, Taylor's series method, Euler's method, modified Euler's method, Runge-Kutta methods.

Unit-IV

Laplace Transform: Laplace transforms of elementary functions; Basic properties of Laplace transform; Initial value theorem, final value theorem and convolution property of Laplace transform; Inverse Laplace transforms. Applications of Laplace transform to solve ordinary differential equations.

Text Books/References

1. H.C. Saxena. Text Book of Finite Differences and Numerical Analysis, S. Chand and Co.
2. M.K. Jain, S.R.K. Iyengar and R.K. Jain. Numerical Methods for Scientific and Engineering computation, New Age International (P) Ltd.
3. N.P. Bali and Manish Goyal. A Text book of Engineering Mathematics, Laxmi Publication Pvt. Ltd., New Delhi (VII Edition).

4. S.P. Goyal and A.K. Goyal. Integral Transforms, Jaipur Publishing House, Jaipur.

CE 211 (AE, EE, MI) STRENGTH OF MATERIALS

After completion of this course a student will be able to analyze the behavior of simple structural elements under simple loadings

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	1	2

Unit-I

Fundamentals : Stress and strain, engineering properties, Saint-Venant's Principle. Stress strain diagram's, mechanical properties of materials, elasticity and plasticity. Shear stress. and strain, pure shear. Complementary shear. Linear elasticity and Hooke's law. poisson's ratio, volumetric strain, bulk modulus of elasticity. Elastic constants and relation between elastic moduli. Stress and strain in axially loaded members. Temperature stresses and effects.

Unit-II

Analysis of stress and strain : Stress at a point, stress components. Stresses on inclined planes. Plane stress and strain. Mohr's circle representation of plain stress and strain. Principle stresses and strains, maximum shear stresses. Hooke's law for plain stress.

Stresses in thin cylinder and special shells subjected to internal & external pressures.

Unit-III

Beam under Flexural Loads : Bending moment and shear force, relation between load, Shear force and bending moment. Bending moment and shear force diagrams for simply supported, Cantilever and overhang beams under static loading of different types viz. point loads, Uniformly distributed loads, linearly varying loads, Pure bending. Theory of simple bending of initially straight beams. Flexural stresses in beams. Built up and composite beams. Shear stresses in beams of rectangular, Circular and I-section. Shear formula, effect of shear strain.

Unit-IV

Torsion : Torsion of solid and hollow circular shafts. Non-uniform torsion.

Columns : Buckling and stability, critical load. Euler's theory for initially straight column with different end conditions, equivalent length, Limitation of Euler's formula. Rankine's formula. column under concentric loading. Secant, Perry's and Indian standard Formulae.

Practicals

1. Study of Universal Testing Machine, its part and functions.
2. Operation of U.T.M, fixing of specimen for different testing.

3. Tensile test on mild steel specimen to failure and computing, Stresses, % elongation, Contraction etc.
4. Compression test on timber.
5. Compression test on mild steel.
6. Compression test on concrete cube.
7. Determination of toughness test of mild steel, Brass and Aluminum by Charpy test.
8. Determination of toughness by Izod test for wood, Aluminum & Brass.
9. Study of torsion testing machine.
10. Performance of torsion test on circular shaft specimen.
11. Bending test on wooden beam and determination of modulus of rupture.
12. Deflection test on wooden beam.
13. Revision.
14. Revision.
15. Revision.

Text Books/References

PF 212 INTRODUCTORY FOOD ENGINEERING

To acquaint the students with various aspects of food engineering such as mass and energy balance, fluid flow, heat transfer and psychrometry

Cr. Hrs. 2 (1 + 1)

	L	T	P
Credit	1	0	1
Hours	1	0	2

Unit-I

Introduction to food engineering, units and dimensions, introduction to mass and energy balance, simple food processing operations, problems based on of mass and energy balance of simple food processing operations.

Unit-II

Fluid flow in food processing: properties of liquid, handling system for Newtonian liquid, mechanical energy balance, flow measurement, flow past immersed bodies, drag, drag coefficient, motion of particle through fluid, equation for one dimensional motion of particle through fluid.

Unit-III

Heat transfer in food processing, conduction, conduction through bodies in series and parallel, convection, overall heat transfer coefficients, natural and forced convection.

Unit-IV

Introduction to Psychrometry, psychrometric properties, psychrometric chart, various psychrometric processes, application of psychrometry in simple food processing operations.

Practicals

1. Study of applications of dimensional analysis.
2. Study of simple processes for mass balance in food processing
(a) Evaporation (b) Drying
3. Study of simple processes for energy balance in food processing
(a) Evaporation (b) Drying
4. Study of pumping systems for liquid food processing plants.
5. Determination of energy requirement for pumping in liquid food processing plants.
6. Study of flow past immersed bodies.
7. Study of heat transfer calculations for various shapes.
8. Study of cooling load calculations for food industries.
9. Calculations of drag coefficients for various shapes.
10. Determination of liquid properties
(a) Density (b) Viscosity

Text Books/References

1. R. C. Verma and S. K. Jain. (2002). Fundamentals of Food Engineering, Himanshu Publications, New Delhi.
2. R. P. Singh and D. R. Heldman. (1997). II Ed. Introduction to Food Engineering. Academic press.

AG 213 FUNDAMENTALS OF AGRICULTURE

This course enable the Ag. Engg. Graduates to identify problematic soils and water and also basics of cereal and horticultural crop production

Cr. Hrs. 4 (3 + 1)

	L	T	P
Credit	3	0	1
Hours	3	0	2

Unit-I

Soils: Definition of soil, important soil physical properties and their importance, soil inorganic colloids, their composition, properties and origin of charge, ion exchange in soil and nutrient availability, soil organic matter, its composition and decomposition, effect on soil fertility, soil reaction; acid, saline and sodic soils, quality of irrigation water,

essential plant nutrients, their functions and deficiency symptoms in plants, important inorganic fertilizers and their mode of action in soils.

Unit-II

Agronomy: Definition and scope of agronomy, classification of crops, effects of different weather parameters on crop growth and development. Soil-water-plant relationship and water requirement of crops, weeds and their control, crop rotation, cropping systems, mono-cropping, double cropping, relay cropping and mixed cropping.

Unit-III

Study of following crops with reference to soil and climate requirements, seedbed preparation, improved varieties, seed rate, time and method of sowing, manuring, fertilisation, intercultural operations, weed control, irrigation, crop protection and their area, production and productivity in Rajasthan: Cereals-wheat, maize and bajra, Pulses- bengal gram, kharif pulses (green gram, black gram, and cowpea), Oil seeds- groundnut and mustard. Introduction to cash crops- cotton, sugarcane and potato and fodder crop- berseem.

Unit-IV

Horticulture: Scope of horticulture and vegetable crops, soil and climatic requirements for fruits, vegetable and floriculture crops, improved varieties, criteria for site selection, layout and planting methods, nursery raising and micro propagation methods, plant growing structures, pruning and training, fertilizer application, fertigation, irrigation methods, harvesting, grading and packaging, post harvest practices, management of orchards, extraction and storage of vegetable seeds. Introduction to hi-tech horticulture.

Practicals

Soils:

1. Determination of electrical conductivity and pH of soil.
2. Estimation of organic carbon of soil.
3. Determination of bulk density
4. Determination of particle density and computation of soil porosity.

Agronomy:

1. Identification of crops.
2. Identification of seeds of different crops.
3. Identification of weeds.
4. Fertilizer application methods
5. Different weed control methods
6. Judging maturity time for harvesting of kharif crops

Horticulture:

1. Identification and description of important fruit, flower and vegetable crops
2. Study of different vegetable cultivation tools
3. Practices of training and pruning in some important crops

4. Vegetative propagation methods

EE 213 (AE, ME, MI) ELECTRICAL ENGINEERING – II

Understand of Characteristics D.C. Generators and Motors, Starting and Speed Control of Motors
Understand Phasor Diagram and Equipment Circuits, Regulation, Efficiency and Their Determination.

Comprehended Poly-Phase Induction Motors- Starters, Equivalent Circuit. Speed Control By Rotor Resistance, Pole Changing and Cascading.

Understand Alternator- Calculation of Induced E.M.F, factors affecting Generating E.M.F. Open Circuit, Short Circuit and Load Characteristics and Synchronous Motor Starting. Application in industries

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

D.C. Machines: Characteristics curves of d.c. generators and motors, application of motors for different uses, starting and speed control of motors.

Unit-II

Transformers: Phasor diagram and equivalent circuits, regulation efficiency and their determination. Open circuit, short circuit and Sumpner's test.

Unit-III

Induction Motors: Polyphase induction motors – starters, equivalent circuit, effect of rotor resistance, torque-slip curves, speed control by rotor resistance, pole changing and cascading, use in industry. Single phase induction motor – starting methods.

Unit-IV

Alternators: Elementary idea of armature winding. Calculation of induced e.m.f., factors affecting generating e.m.f. Open circuit, short circuit and load characteristics. Voltage regulation and its determination by synchronous impedance methods. Synchronising.

Synchronous Motors: Methods of starting. Power angle characteristics of cylindrical rotor machine, operation of synchronous motor as a condenser and as a reactor. Applications in industries.

Practicals : Lab practicals will be as per the theory syllabus.

Text Books/References

1. Nagrath and Kothari. Electrical Machines.
2. Ashfaq Hussain. Fundamentals of Electrical Engineering.

FM 214 FARM POWER

The students will be able to learn about different sources of farm power, construction and functioning of CI and SI engines, IC engine fuels, Coolants, anti freeze and anti corrosion materials.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2 -	0 -	2

Unit I

Sources of farm power -conventional and non-conventional energy sources. Classification of tractors and CI engines. Difference between CI and SI, Two stroke and four stroke engines. Status of tractor and power tiller industries in India. Review of thermodynamic principles of CI engines and deviation from ideal cycle. Simple numerical problems horse power calculation.

Unit II

CI Engine systems : Study of engine components their construction, operating principles and functions.valves & valve mechanism. Fuel, intake and exhaust, ignition, starting and electrical systems.

Unit III

IC engine fuels - their properties & combustion of fuels, gasoline tests and their significance, diesel fuel tests and their significance, detonation and knocking in IC engines, Simple numerical problems on fuel combustion.

Unit IV

Study of properties of coolants, anti freeze and anti-corrosion materials, lubricant types and study of their properties. Engine cooling and lubricating systems. Engine governing systems: centrifugal and pneumatic.

Practical:

1. Introduction to different systems of a CI engine; Engine parts and functions.
2. Valve system – study and adjustments.
3. Oil & Fuel - determination of physical properties.
4. Study of Air cleaning system.
5. Study of Fuel supply system of CI engine.
6. Study of Cooling system: thermostat and radiator.
7. Study of Lubricating system.
8. Study of Starting and electrical system of tractor.
9. Study of engine performance curves.
10. Visit to engine manufacturer/ assembler/ spare parts agency.

Text Books \ References

ME 215 (AE) HEAT AND MASS TRANSFER

CO1:Thermal Engineering

CO2:Understanding of conduction heat transfer from different surfaces.

CO3:Knowledge of free and forced convective heat transfer.

CO4:Introduction of Insulations and Heat Exchangers.

CO5:Basic knowledge of theories of radiant heat transfer and radiaon exchange between different surfaces.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Introductory concepts, modes of heat transfer, thermal conductivity of materials, measurement.

Conduction: General differential equation of conduction. One dimensional steady state conduction through plane and composite walls, tubes and spheres with and without heat generation. Electrical analogy. Insulation materials, critical thickness of insulation. Fins.

Unit-II

Convection: free and forced convection. Newton's law of cooling, heat transfer coefficient in convection. Dimensional analysis of free and forced convection. Useful non dimensional numbers and empirical relationships for free and forced convection. Introduction to thermal boundary layer.

Unit-III

Radiation: Introduction. Absorptivity, reflectivity and transmissivity of radiation. Black body and monochromatic radiation, Planck's law, Stefan-Boltzman law, Kirchoff's law, grey bodies and emissive power, solid angle, intensity of radiation. Radiation exchange between black surfaces, geometric configuration factor.

Unit-IV

Heat Exchangers: Types of heat exchangers, fouling factor, log mean temperature difference, heat exchanger performance, transfer units. Heat exchanger analysis restricted to parallel and counter flow heat exchangers.

Introduction to Mass Transfer: Steady state molecular diffusion in fluids at rest and in laminar flow. Flick's law, mass transfer coefficients. Reynold's analogy.

Practicals

1. To measure thermal conductivity of metal bars.
2. To measure thermal conductivity of insulating powders.
3. To study temperature distribution along the length of fin in natural and forced convection.
4. Experiment on heat transfer in forced convection.
5. Experiment on heat transfer in natural convection.
6. To determine emissivity of given surface.
7. To determine Stefan-Boltzman constant and verify the law.
8. To determine rate of heat transfer, LMTD and overall heat transfer coefficient for parallel flow heat exchanger.
9. To determine rate of heat transfer, LMTD and overall heat transfer coefficient for counter flow heat exchanger.

Text Books/References

 4. S.P. Sukhatme. A Text Book on Heat Transfer, Orient Longman.

SW 216 HYDROLOGY

To give an exposure to the students about the climatic parameters and their analysis to study direct and indirect effect on agriculture scenario of particular area, giving main focus on water availability, distribution and circulation.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Introduction; hydrologic cycle; precipitation - forms, rainfall measurement, mass curve, hydrograph, mean rainfall depth, frequency analysis of point rainfall, plotting position, estimation of missing data, test for consistency of rainfall records.

Unit-II

interception; infiltration; evaporation; evapo-transpiration - estimation and measurement; geomorphology of watersheds - stream number, stream length, stream area, stream slope and Horton's laws; runoff - factors affecting, measurement; stage and velocity, rating curve, extension of rating curve; Estimation of peak runoff rate and volume; rational method, Cook's method, SCS method, Curve number method.

Unit-III

Hydrograph; components, base flow separation, unit hydrograph theory-unit hydrograph of different durations, dimensionless unit hydrograph, distribution hydrograph, synthetic unit hydrograph, uses and limitations of unit hydrograph.

Unit-IV

Head water flood control - methods, retards and their location; flood routing - graphical methods of reservoir flood routing; hydrology of dry land areas - drought and its classification.

Practicals

1. Visit to meteorological observatory.
2. Study of different types of rain gauges.
3. Exercise on analysis of rainfall data.

4. Double mass curve technique.
5. Determination of average depth of rainfall and frequency analysis.
6. Study of stage recorders and current meters.
7. Exercise on estimation of peak runoff rate and runoff volume.
8. Exercises on hydrograph and unit hydrograph.
9. Exercises on design and location of retards for channel improvement.
10. Exercises on flood routing problems.

Text Books/References

5. Ullah, Wasi, S.K. Gupta and S.S. Dalal. (1972). Hydrological Measurements for Watershed Research, Jugal Kishore and Co., Dehradun.

SECOND YEAR B.TECH. (IV SEMESTER)

CE 221 (AE, MI) FLUID MECHANICS

To impart the knowledge of properties of fluid, hydro-statics and kinematics of fluid flow

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Hydrostatics : Fluid Properties, Measurement of liquid pressure. Pascal's law fluid pressure on plane and curved stationery surface, Centre of pressure, Principal applications (preliminary) in simple gales and tanks.

Unit-II

Fluid motion: type and patterns, velocity and acceleration of fluid, continuity equation, elementary concept of velocity potential. Stream function and flow nets. Euler's equation of motion, integration of Euler's equation to give Bernoulli's equation for compressible and incompressible fluids. Euler's equation of motion. Integration of Euler's equation to give Bernoulli's equation for compressible and incompressible fluids, applications of Bernoulli's equation.

Unit-III

Impulse momentum equation: introduction, Force on pipe bends. Flow through sharp edged orifices, flow through mouth pieces (steady flow condition).

Discharge measurement in pipes and open channels: Venturimeter, orificemeter. Nozzle and pitot tube (steady flow condition). Flow over weirs, and notches (steady flow condition).

Unit-IV

Flow through pipes: Various types. Velocity distribution. Loss of head due to friction. Minor losses, hydraulic gradient, pipes in series and parallel.

Open Channel Flow: Various types, flow equations, geometrical properties of sections, Most economical section.

Practicals

1. Study and use of pressure gauge.
2. Study & use of manometer.
3. Determination of C_C for orifices.
4. Determination of C_V for orifices.
5. Determination of C_d for orifices.
6. Calibration of a Venturimeter.
7. Calibration of V notch.

8. Calibration of Rectangular notch.
9. Determination of friction for pipe.
10. Velocity distribution in channel cross section.
11. Field visit.
12. Field visit.
13. Revision.
14. Revision.

Text Books/References

1. Jadish Lal, Hydraulics. (1986). Metropolitan Book Co. Pvt. Ltd., Delhi.
2. P.N. Modi and S.M. Seth. (1995). Hydraulic and Fluid Mechanics, Standard Book House, Delhi-6.
3. R.K. Bansal. Fluid Mechanics & Machine.

CE 222 (AE) SURVEYING

To impart the knowledge of basic principles of surveying, different types of surveying and applications

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Plane table surveying: Description, construction and use of various accessories and centring, leveling and orientation.

Method of plane table: Radiation, Intersection, Traversing & resection. Two Point problems and their solution by Different methods. Three point problems and their solution by different methods, Great circle method. Advantages and disadvantages of plane table.

Unit-II

Description, construction and use of Theodolite, Temporary adjustments of Theodolite, Fixing, Centring, leveling and elimination of parallax. various axes and their relationship. Principles of Tacheometric survey and its field application. Constants of Tachometer. Staff held vertical and inclined. Use of Analytical lens, calculation of R.L. Use of stadia cross wires.

Unit-III

Contours, contouring and their characteristics. Methods of contour surveying by Theodolites. Methods of contour surveying by Tachometer. Contour Drawing by different methods.

Unit-IV

Area calculation of regular boundaries by mathematical formulas. Use of Trapezoidal and Simpson's formula, their limitation. Planimeter: Its construction use and theory, Area calculations, Use of zero circle and solution of numerical Problems.

Computation of volumes, Earth work calculations. Level, Two level and Three level sections.

Calculation of volume by the use of contour and their use in computing the reservoir capacity.

Practicals

1. Setting up of plane table, use of various accessories and practice for orientation and charge of Point.
2. Radiation and intersection method of plane tabling.
3. Two point problem and its solution, three point problem and its solution.
4. Contouring by plane table method.
5. Conducting contour survey in different area their compilation.
6. Study of theodolite, fixing on stand and temporary adjustment, Permanent adjustment of theodolite and their checking.
7. Horizontal and vertical angle measurements by theodolite.
8. Problems of height and distance.
9. Use of tachometer with inclined sight and staff held inclined.
10. Contouring by grid method.
11. Contouring by radial line method.
12. Contouring by spot level method.
13. Practice of contour plotting by various methods.
14. Use of planimeter, finding constants and calculation of areas of irregular boundaries.
15. Introduction of total station.

Text Books/References

1. T.P. Kanetker & S.V. Kulkarni. (1990). Surveying and Leveling Vol. I & II Pune Vidyarthi Griha, Prakashan, Pune – 30.
2. B.C. Punmia. (1990). Surveying and Field work Vol. I & II Laxmi Publications, New Delhi.

CE 223 (AE) SOIL MECHANICS

To impart the knowledge of basic properties of soil, analysis of stresses, bearing capacity of soil etc.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Introduction of Soil Mechanics, field of Soil Mechanics. Phase diagram, physical and index properties of soil. Classification of Soil, general classification based on particle size, textural classification and I.S. Soil classification system.

Unit-II

Stress condition in soils, effective and neutral stress. Elementary concept of Bousinesque and Westergaard's analysis.

Shear strength, Mohr stress circle, theoretical relationship between principal stresses, Mohr-Colomb failure theory, Effective stress principle. Determination of shear parameters by direct shear, theoretical relationship between principal stresses, Triaxial, unconfined compression and vane shear test. Numerical exercises based on various types of tests.

Unit-III

Compaction: Compaction of Soil, standard and modified proctor test, Abbot compaction and Jodhpur mini compaction test Field compaction method and control.

Consolidation of soil: One dimensional consolidation spring analogy. Terzaghi's theory of one dimensional consolidation Laboratory consolidation test. Calculation of void ratio and coefficient of volume change, Taylor's and Casagrande's method for determination of coefficient of consolidation.

Unit-IV

Earth pressure: Plastic equilibrium in soils, active and passive state, Rankine's theory of earth pressure Active and passive earth pressure for cohesive soils, simple numerical exercises.

Bearing capacity: Definition, elementary concept of Rankine's and Terzaghi's analysis. Effect of water table, plate load test, standard penetration test (introduction). Bearing capacity by building codes, simple numerical exercises.

Practicals

1. Sieve analysis of soils.
2. Hydrometer analysis for grain size distribution in soils.
3. Field density determination by sand replacement methods.
4. Field density determination by core cutter methods.
5. Determination of maximum dry density and optimum moisture content by :
 - (a) Standard.
 - (b) Mini compaction.
 - (c) Abbot's compaction.
6. Determination of Atterberg's limits of soils.
7. Unconfined compression test.
8. Shear box test.
9. Triaxial test.
10. Vane shear test.
11. Consolidation test.

12. Study and use of sampling equipments.

Text Books/References

2. B.C. Punmia & A.K. Jain. (1996). Soil Mechanics & Foundations. Laxmi Publication Pvt. Ltd., Ansari road, Darya Ganj. New Delhi- 110002.

ME 224 (AE) THEORY AND DESIGN OF MACHINES

Mechanisms and their motions under different degrees of freedom. Transmission through Gears: mechanism, gear trains, classification and analysis, familiarity with gear standardization. Power transmission through belts and chains, mechanisms, materials. Storage of mechanical energy and use of friction. Designing shafts, springs, joints and couplings

Cr. Hrs. 3 (3 + 0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Mechanisms: Elements, links, pairs, kinematic chain, and mechanisms. Classification of pairs and mechanisms. Lower and higher pairs. Four bar chain, slider crank chain and their inversions.

Gear: Types of gears. Law of gearing, Involute and cycloidal profile for gear teeth. Spur gear, nomenclature. Interference and undercutting. Introduction to helical, spiral, bevel and worm gear.

Gear Trains: Simple, compound, reverted, and epicyclic trains. Determining velocity ratio by tabular method.

Unit-II

Power Transmission: Belt drives, types of drives, belt materials. Length of belt, power transmitted, velocity ratio, belt size for flat and V belts. Effect of centrifugal tension, creep and slip on power transmission. chain drives.

Flywheel: Turning moment diagrams, co-efficient of fluctuation of speed and energy, weight of flywheel, flywheel applications.

Friction: Types of friction, laws of dry friction. Friction of pivots and collars. Single disc, multiple disc, and cone clutches. Rolling friction, anti friction bearings.

Unit-III

Introduction: Meaning of design, Phases of design, design considerations. Common engineering materials and their mechanical

properties. Types of loads and stresses, theories of failure, factor of safety, selection of allowable stress. Stress concentration.

Design of joints: Cotter joints, knuckle joint and pinned joints, turnbuckle. Design of threaded fasteners subjected to direct static loads, bolted joints loaded in shear (eccentric loading not included).

Unit-IV

Design of shafts, keys and couplings: Design of shafts under torsion and combined bending and torsion. Design of keys. Design of muff or sleeve, and rigid flange couplings. Design of flat belt drives.

Design of brackets, levers.

Design of helical and leaf springs.

SW 225 SOIL AND WATER CONSERVATION ENGINEERING

To have understanding about the degradation of productive soil globally and its effect thereon, also to know about the causes about water scarcity and their solution to fight against the evil effects through soil and water conservation technologies.

Cr. Hrs. 4 (3 + 1)

	L	T	P
Credit	3	0	1
Hours	3	0	2

Unit-I

Introduction; soil erosion : Causes, types and agents of soil erosion; water erosion - forms of water erosion, mechanics of erosion; gullies and their classification, stages of gully development; soil loss estimation - universal soil loss equation and modified soil loss equation, determination of their various parameters;

Unit-II

Erosion control measures : Agronomical measures - contour cropping, strip cropping, mulching; mechanical measures - terraces - level and graded broad base terraces and their design, bench terraces & their design, layout procedure, terrace planning, bunds - contour bunds, graded bunds and their design; characteristics of contours and preparation of contour maps; land use capability classification;

Unit-III

Wind erosion : Factors affecting wind erosion, mechanics of wind erosion, soil loss estimation, wind erosion control measures - vegetative, mechanical measures, wind breaks & shelter belts, sand dunes stabilization; sedimentation - sedimentation in reservoirs and streams, estimation and measurement, sediment delivery ratio, trap efficiency; gully and ravine reclamation - principles of gully control - vegetative and temporary structures;

Unit-IV

Grassed water ways and their design; introduction to water harvesting techniques; introduction to stream water quality and pollution.

Practicals

1. Study of soil loss measurement techniques.
2. Study of details of Coshocton wheel and multi-slot runoff samplers.
3. Determination of sediment concentration through oven dry method.
4. Problems on Universal Soil Loss Equation.
5. Preparation of contour map of an area and its analysis.
6. Design of vegetative waterways; Design of contour bunding system.
7. Design of graded bunding system.
8. Design of various types of bench terracing systems.
9. Determination of rate of sedimentation and storage loss in reservoir.
10. Design of Shelter belts and wind breaks.

PF 226 FOOD PROCESS ENGINEERING

To acquaint the students with various operations of food processing such as cleaning, grading, size reduction, mixing, filtration and material handling.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Cleaning and Grading, screening, types of screen, grain size, particle motion on screen, screen opening, ideal and actual screen, screen analysis, fineness modulus, effectiveness of screen. Equipments for cleaning, grading and separations, air screen cleaner, disc separator, indented cylinder separator, spiral separator, specific gravity separator, cyclone separator.

Unit-II

Size reduction, Principal of size reduction, crushing efficiency, energy requirement in size reduction, power requirement in size reduction by Kick's Rittinger's and Bond's laws, size reduction procedures, size reduction equipments, crushers, grinders, attrition mills, hammer mill, cutting machines, performance of size reduction machines.

Unit-III

Introduction to Mixing: Theory of mixing, types of mixtures for dry and paste. materials, rate of mixing and power requirement, mixing index.

Introduction to filtration: Theory of filtration, study of different types of filters, rate of filtration, pressure drop during filtration.

Unit-IV

Scope & importance of material handling devices, study of different types of material handling devices such as belt, chain, screw conveyor, bucket elevator, pneumatic conveying- design consideration, capacity and power requirement.

Practicals

1. Determination of fineness modulus

2. Determination of uniformity index
3. Determination of effectiveness of screens
4. Study of cyclone separator
5. Study of air screen cleaner
6. Study of indented cylinder separator
7. Study of specific gravity separator
8. Study of hammer mill
9. Study of attrition mill
10. Study of various cleaning equipment
11. Study of belt conveyor
12. Study of bucket elevator.
13. Study of screw conveyor

FM 227 FARM MACHINERY AND EQUIPMENT – I

To identify the need of farm mechanization in India. Also equip the students with technical knowledge and skills required for the operation, maintenance and evaluation of Tillage, Sowing and intercultural operational machinery needed for agricultural farms.

To abreast the students with mathematical, experimental and computational skills for solving different field problems.

To develop skills in the students required to develop and modification of indigenous farm machines as per the need of the area and farmers

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Objectives of farm mechanization: Introduction to various farm operation, implement types. Classification of farm machines. Materials of construction. Tillage and its objectives. Field capacities, field efficiency and simple numerical problems.

Unit-II

Primary and secondary tillage equipment; Ploughs-Desi, Mouldboard, Subsoiler, Rotary tiller and Puddlers. Forces acting on M.B. Plough and disc harrow. Draft measurement of tillage equipment and simple numerical problems.

Unit-III

Crop planting methods : Sowing and planting equipment - their construction, metering mechanism, furrow openers, covering devices and metering mechanism for fertilizer applications, calibration and adjustments. Paddy transplanter and its construction. Simple numerical problems on seed drills and planters. Introduction to plot seed drills and precision planters.

Unit-IV

Methods and equipments for interculture and weed control. *Introduction to plant protection equipment*: Sprayers, dusters and their calibration, Constructional features of different components and adjustments of knapsack and foot sprayers and rotary duster. Simple numerical problems on calibration of sprayers. Introduction to earth moving equipment, construction & working principles of Bulldozer and numerical problems on its output.

Practicals

1. Introduction to various farm machines and visit to implement's shed.
2. Construction details, adjustments and working of M.B. plow.
3. Construction details, adjustments and working of disc plow.
4. Construction details, adjustments and working of disc harrow.
5. Construction details, adjustments and working of secondary tillage tools.
6. Field capacity and field efficiency measurement of tillage and planting equipment.
7. Draft & fuel consumption measurement of different implements.
8. Working of seed-cum-fertilizer drill and its calibration.
9. Working of planters.
10. Weeding equipments and their use.
11. Study of knapsack and foot sprayers.
12. Study of rotary duster.
13. Construction and working of rotavator.

14. Study of bulldozer.

FM 228 FIELD OPERATION AND MAINTENANCE OF TRACTORS

The student will acquire knowledge regarding makes and models of tractors, different systems and periodic maintenance tractors, tractor driving with and without two wheeled trailer and about driving safety rules

Cr. Hrs. 1 (0 + 1)

	L	T	P
Credit	0	0	1
Hours	0	0	2

Practical:

1. Identification and location of various systems of a tractor viz. fuel, lubrication, cooling, electrical, transmission, hydraulic and final drive system.
2. Familiarisation with tractor controls and learning procedure of tractor starting and stopping.

3. Study of driving safety rules: Road signs, traffic rules, road safety, driving and parking of tractor.
4. Familiarisation with different makes and models of tractors in India.
5. Forward and reverse tractor driving practice.
6. Tractor driving practice with two wheeled tractor trailer forward and reverse.
7. Familiarisation with tools and equipment used for maintaining and servicing of tractors and farm machines; Doing the 10-hours service jobs and Maintenance after 50- hours of operation; Maintenance after 100 hours of operation; Maintenance after 250 hours of operation; Maintenance after 500 hours and 1000 hours of operation.
8. Dismantling and assembling of major engine parts.
9. Visit to tractor/ engine repair workshop.

Text Books / References

1. Jacobs. Co. and William R.H., Agricultural power and machinery, Mc-Garw Hill Book Company
2. Rai and Jain, Tractor maintenance & repair.
3. Service manuals of various tractors.

THIRD YEAR B.TECH. (V SEMESTER)

FM 311 FARM MACHINERY AND EQUIPMENT – II

To identify the need of timely harvesting of crops in India. Also equip the students with technical knowledge and skills required for the operation, maintenance and evaluation of harvesting, threshing and land preparation (heavy) machinery needed for agricultural farms.

To abreast the students with mathematical, experimental and computational skills for solving different field problems.

To develop skills in the students required to develop and modification of indigenous harvesting machines/methods as per the need of the area and farmers

Also to give a brief introductory idea of importance of testing of agricultural machines and tractors.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Principles and types of cutting mechanisms. Harvesting equipment, Mowers – types of mowers (reciprocating and rotary); cutter bar, mowers parts, construction operation and adjustments. Accelerating forces on reciprocating parts and numerical problems. Attachments to the cutter bar, trouble shooting, cutting pattern of reciprocating knife. VCR and its constructional. Simple numerical problems on mowers.

Unit-II

Forage Chopping and Handling: Types of field forage harvesters and choppers, part and construction, details of forage choppers, Attachments, maintenance, trouble shooting. Numerical problems on forage choppers. Introduction of Grain harvesting.

Unit-III

Types and different functional units of combine. Operation, adjustment and different losses. Numerical problems on losses. Introduction to straw combine. Principles of threshing and various types of threshers. Maize harvesting and shelling equipment, Introduction to plot combines and plot threshers.

Unit-IV

Root crop harvesting equipment – potato. Horticultural tools: hand tools and posthole digger. Testing procedure for thresher and combine by using BIS Test codes. Introduction to Laser land leveller.

Practicals

1. Familiarization with various farm machines related to harvesting, threshing and combine.
2. Study of cutterbar: constructional details, adjustments and working.
3. Study of vertical conveyor reaper: constructional details, adjustments and working.
4. Study of potato harvester: constructional details, adjustments and working.
5. Study of forage harvester: constructional details, adjustments and working.
6. Study of maize sheller: constructional details, materials and working.
7. Study of various types of threshers: constructional details, adjustments and working.
8. Study of combine harvester: constructional details, working and trouble shooting.
9. Study of straw combine.
10. Study of laser land leveller.
11. Study of post hole digger.

Text Books\References

7. Singh, S. and Verma, S.R. Farm Machinery Maintenance and Management. DIPA, ICAR, KAB -I, New Delhi.

RS 312 RENEWABLE ENERGY SOURCES

After completion of the course, every student is exposed to various wastes recycling and renewable energy based efficient technologies. Practical exposure to analyse basic parameters of waste and waste management techniques is also provided.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Classification of energy sources; Introduction to renewable energy sources; role of energy in economic development; energy consumption patterns.

Biomass: Introduction to biomass as source of energy and its advantages, Biomass Classification. Characterization of biomass (proximate analysis and ultimate analysis), Biomass combustion.

Biomass conversion technologies (thermo-chemical, biochemical and agrochemical) technology, Biomass gasification technology.

Unit-II

Types, construction, working principle, design & operational parameters, selection of size, site and beneficiaries, uses and safety/environmental aspects of different biomass based renewable energy devices like gasifiers, biogas plants, etc.

Unit-III

Solar passive heating devices, photovoltaic cells and arrays; Brief introduction to wind energy, hydroelectric energy, ocean energy,

Unit-IV

Densification of biomass, briquetting and baling of biomass, bio-diesel preparation and energy conservation in agriculture.

Practicals

1. Preparation of biomass sample.
2. Determination of calorific value.

3. Estimation of ash content of biomass.
4. Estimation of moisture content of biomass.
5. Estimation of fixed carbon and volatile matter of biomass.
6. Demonstration of down draft throatless gasifier.
7. Demonstration of down draft gasifier with throat.
8. Demonstration of gasifier for thermal use.
9. Demonstration of working of a fixed dome type biogas plants.
10. Demonstration of working of a floating drum type biogas plants.
11. Demonstration of biodiesel preparation.
12. Measurement of basic solar parameters.
13. Demonstration of solar water heater.
14. Demonstration of PVC.
15. Demonstration of solar cooker.
16. Demonstration of solar dryer.
17. Evaluation of briquetting machines.

ME 313 (AE) REFRIGERATION AND AIR CONDITIONING

Introduction of basic principle of different refrigerating systems. Understanding the effect of different components on the refrigerating machines. Knowledge of different Refrigerants and Refrigeration Equipments. Introduction of Psychrometry and different Psychrometry processes. Designing of airconditioning system and Estimation of airconditioning load.

Cr. Hrs. 3 (2 + 1)

L T P

Unit-I

Introduction: Second law of thermodynamics applied to refrigeration. Reversed Carnot cycle, coefficient of performance. Unit of refrigeration.

Vapour Compression System: Theoretical vapour compression cycle. Deviation of actual cycle from ideal cycle, undercooling, dry and wet compression. Compressors, expansion valves, evaporators and condensers.

Unit-II

Vapour Absorption System: Vapour absorption refrigeration system and components.

Refrigerants: Desirable properties of ideal refrigerant. Classification of refrigerants. Important refrigerants like ammonia, Freons. Secondary refrigerants like water and brine.

Unit-III

Psychrometry: Thermodynamic properties of moist air, perfect gas relationship for approximate calculation. Adiabatic saturation process. Wet bulb temperature and its measurement. Psychrometric chart and its use. Elementary psychrometric processes.

Air Conditioning: Types of air conditioning systems, concept of thermal comfort.

Unit-IV

Basics of airconditioning load estimation and space air distribution.

Cooling and Dehumidification: Chilled water spray, surface cooling and dehumidification, sensible cooling with dry coils, direct expansion wet coils. Evaporative cooling. Design of cold storage for perishable products using sensible and latent cooling loads, electrical appliances load, respiration load.

Practicals

1. Study of vapour compression and vapour absorption systems.
2. Study of Electrolux refrigerator.
3. Study and determining COP of ice plant.
4. Study and determining of COP of water cooler.
5. To determine COP of vapour compression refrigeration rig.
6. Study of charging of vapour compression refrigeration system.

7. Study of leak detection devices.
8. Study of evaporative cooling system.

Text Books/References

1. S. Domkundwar and S.C. Arora. Refrigeration and Air Conditioning, Dhapat Rai & Sons, Delhi.
2. J.L. Threlkeld. Thermal Environmental Engineering, Prentice Hall.

PF 314 POST HARVEST ENGINEERING

To acquaint the students with various operations of food processing such as cleaning, grading, size reduction, mixing, filtration and material handling.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Importance of engineering of properties of biological materials, study of different physical and thermal characteristics of important biological living materials like shape, size volume density, roundness, sphericity, angel of repose, surface area, sp. Heat, thermal conductivity, color, thermal velocity, chemical composition of grain.

Unit-II

Cleaning and separation, effectiveness of separation, husking of grain, factors affecting and effectiveness of husking, traditional rice milling machine, modern rice milling machinery, general principles of cleaning, double sieve cleaner and single scraper, drum cleaner, paddy cleaner with destoner, rubber roll husker (Japan type), whiting of grain.

Unit-III

Post harvest engineering of cereals and millets, milling of corn, introduction corn dry milling, tempering, degerming method, corn wet milling method, wheat milling, modern flour milling.

Unit-IV

Milling of pulses and oil seeds, introduction to pulse milling, traditional pulse milling, commercial pulse milling processes, introduction to oil milling, traditional methods for oil milling such as village Ghanis, mechanical oil expeller, pre-treatments for oil milling.

Practicals

1. To find the shape and size of cereals, pulses and oil seeds grains
2. To determine the bulk density of grains

3. To determine porosity of grain
4. Study of cleaner cum grader
5. Study of mechanical oil expeller
6. Study of maize dehusker sheller
7. Study of whole flour mill
8. Study of CFRTI Dal mill
9. Study of CIAE Dal mill
10. Study of modern rice mill
11. Visit to modern flour mill
12. Visit to solvent extraction plant
13. Determination of hardness of grain

Text Books/References

1. A. Chakravorty & D.E. De. (1998). Post Harvest Technology of Cereal and Pulses. Oxford & ISH Publishing Co. Pvt. Ltd., New Delhi.

SW 315 WELLS AND PUMPS

To enable the students to know about the ground water potential, its dynamic behaviour and exploration manual and mechanically.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Occurrence and movement of ground water, aquifer and its types, classification of wells, steady and transient flow into partially, fully and non-penetrating and open wells, familiarization of various types of bore wells common in the state.

Unit-II

Design of open well, groundwater exploration techniques, methods of drilling of wells, percussion, rotary, reverse rotary, design of assembly and gravel pack, installation of well screen, completion and development of well.

Unit-III

Groundwater hydraulics-determination of aquifer parameters by different method such as Theis, Jacob and Chow's etc. Theis recovery method, well interference, multiple well systems, surface and subsurface exploitation and estimation of ground water potential, quality of ground water, artificial groundwater recharge planning, modelling, ground water project formulation. Pumping Systems: Water lifting devices; different types of pumping machinery, classification of pumps, component parts of centrifugal pumps; pump selection, installation and trouble shooting.

Unit-IV

Design of centrifugal pumps, performance curves, effect of speed on head capacity, power capacity and efficiency curves, effect of change of impeller dimensions on performance characteristics; hydraulic ram, propeller pumps, mixed flow pumps and their performance characteristics; priming, self priming devices, rotodynamic pumps for special purposes such as deep well turbine pump and submersible pump.

Practicals

1. Verification of Darcy's Law.
2. Study of different drilling equipments.
3. Sieve analysis for gravel and well screens design.
4. Estimation of specific yield and specific retention.
5. Testing of well screen.
6. Drilling of a tubewell.
7. Measurement of water level and drawdown in pumped wells.
8. Estimation of aquifer parameters by Thies method, Coopers-Jacob method, Chow method, Thies Recovery method.
9. Well design under confined and unconfined conditions, well losses and well efficiency.
10. Estimating ground water balance.
11. Study of artificial ground water recharge structures.
12. Study of radial flow and mixed flow centrifugal pumps, multistage centrifugal pumps, turbine, propeller and other pumps; Installation of centrifugal pump.
13. Testing of centrifugal pump and study of cavitations.
14. Study of performance characteristics of hydraulic ram.
15. Study and testing of submersible pump.

Text Books/References

1. A.M. Michael. Irrigation Theory and Practices.
2. Michael and Thaper. Wells and Pumps.
3. Todd. Ground Water Hydrology.

CE 316 (AE) DESIGN OF STRUCTURES

To impart the knowledge of design of simple concrete structure and steel structures

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

(A) REINFORCED CEMENT CONCRETE STRUCTURES

Unit-I

Introduction – Grade of Concrete and Characteristics strength, permissible stress in concrete and steel reinforcement. Modular ratio.

Singly Reinforced Beams: Fundamental assumptions, Equivalent area of sections, Neutral axis and Moment of resistance. Balanced, Under-reinforced, Over-reinforced sections.

Types of problems in singly reinforced beams.

Shear stress in R. C. beams, Effect of shear, Reinforcement for shear. I.S. recommendations.

Bond, anchorage, development length.

Doubly Reinforced Beam: Neutral axis, Moment of resistance. Type of problems.

T-Beams: Dimensions, Neutral axis. Lever arm, Moment of resistance with or without web compression. Type of problems in T-Beams.

Unit-II

Cantilever: Design of simple cantilever.

Slabs spanning in one direction.

Two way slabs: Supported on four edges with corners not held down and carrying U.D.L.

Axially loaded columns: Long and short columns. Types of columns.

Load carrying capacity, I. S. recommendations, Design of columns with lateral and spiral reinforcement.

(B) STEEL STRUCTURES

Unit-III

Introduction: Common steel sections, Selection criterion for beams and columns.

Design of Beams: Assumptions in the theory of bending, Design of laterally restrained beams, with checks for shear, deflection; Web buckling and crippling, Design steps, Problems.

Unit-IV

Columns: Classification of columns, Types of sections, Strength of column, Design of axially loaded columns. Compound columns. Design of compound column.

Lacing and Battening : Design of lacing, Design of battening, Column bases, Slab bases. Design of slab with concrete block, Problems.

Practicals

R.C.C.:

1. Design of Singly R.C.C. Beams.
2. Design of Doubly R.C.C. Beams.

3. Design of T-Beam.
4. Design of One-way R.C.C. Slab.
5. Design of Axially Loaded R.C.C. Column.

Steel:

6. Design of Laterally Restrained R.S. Beam.
7. Design of Axially Loaded R.S. Beam.
8. Design of R.S. Compound Column.
9. Design of Lacing & Battening.
10. Design of Base Slab and Concrete Block.

Text Books/References

1. B.C. Punmia. (1992). Reinforced Concrete Structure, Vol. I, Standard Publishers & Distributors, Delhi.
2. Jain and Jaikrishna. (1992). Plane and Reinforced Cement Concrete, Nemi Chand Bros., Roorkee.
3. M.M. Malhotra. (1992). Design of Steel Structure, Jain Brothers, New Delhi.
4. Ram Chandra. (1992). Design of Steel Structures, standard Publishers & Distributors, New Delhi.

CE 317 (AE) CONSTRUCTION TECHNOLOGY

To impart the knowledge of construction technology and estimation of quantities of various works

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

(A) CONSTRUCTION TECHNOLOGY

Unit-I

Components of a building and their function.

Foundation: Function, shallow and pile foundation. Causes of failure and remedial measures.

Masonry Construction: English bond and Flemish bond for one bricks thick wall.

Stone Masonry: Types of stone masonry, Essentials of good stone masonry.

Unit-II

Concept in Concrete Technology and test on concrete.

Load Carrying Floors: Types, stone patti, timber and R.C.C. floors.

Floor Finishing: Lime, Cement concrete, terrazzo, marble and P.V.C. tiles, details of construction.

Roofs: Simple roof trusses, king post roof truss, queen post roof truss.

Earthquake Disaster Management: Introduction, causes of earthquake, their intensities, its effect, safety measures and precautions to face earthquake problem.

(B) ESTIMATING COSTING

Unit-III

Object, Main item of works, the unit of measurement for various item of works & materials.

Various methods of building estimate i.e. long wall-short wall methods & centre line method for one & two room building.

Unit-IV

Organization of Engineering Department : General discussion of P.W.D. accounting & procedure of works classification of work. Contract & contact document. Tender Notice- how to invite tender notice. Opening of tender & various conditions to accept it. Running & Final bill, Earnest money, Security money & measurement book.

Valuation : Purpose of valuation, Outgoings, Scrap value, Salvage value, Market value, Book value, annuity capitalized value, Methods of calculating depreciation, Sinking fund depreciation, Valuation of building.

Practicals

1. To find aggregate crushing value.
2. To perform slump test using slump test apparatus.
3. To perform compacting factor test.
4. To find compressive strength of concrete.
5. Blue print reading & finding dimension for quality calculations.
6. Long-wall & Short wall methods of estimation for one room.
7. Long-wall & Short wall methods of estimation for two room.
8. Centre line method of estimation for one room.
9. Centre line method of estimation for two room.
10. Visiting various sites.
11. Visiting various sites.

Text Books/References

AG 318 AGRIBUSINESS MANAGEMENT AND ENTREPRENEURSHIP DEVELOPMENT

This course enable the students for Agribusiness Management principles, marketing and processing of agricultural commodities in context with new economic era. Build up the students in globalization and international emerging business environment.

Cr. Hrs. 3 (3 + 0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Agribusiness: Management: - Concept, process, functions and FOYAL principles of management, Introduction to management by objectives, Concept, of Agribusiness and application of management principles to agribusiness Agriculture products: production, consumption and marketing.

Unit -II

Meaning and theories of International trade, WTO provisions for trade in agriculture and food commodities, Indias contribution to International trade in food and agri- commodities. Project preparation for small scale agri enterprises and appraisal.

Unit -III

Entrepreneurship Development: concept, characteristics, functions & types of entrepreneurs, factors responsible for entrepreneurship .Motivation and leadership in entrepreneurship development, managing an small scale enterprise, constraints perceived in rural entrepreneurship, SWOT analysis Govt. schemes and incentives for promotion of entrepreneurship. Govt. policies on small & medium enterprise.

Unit -IV

Globalization and international emerging business environment, Development of service sector in agribusiness. Contract farming and custom hiring- Its advantages and specific areas. Public- private partnership & its necessity. Fundamentals of Participatory rural appraisal (PRA), Rapid rural appraisal (RRA) techniques and SHG.

THIRD YEAR B.TECH. (VI SEMESTER)

PF 321 DRYING AND STORAGE ENGINEERING

To acquaint the students with drying of food materials.

To acquaint the students with traditional and modern storage structures.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Moisture and its removal, utilities of drying, moisture content representation, various methods for moisture content measurement, EMC, importance of EMC and methods of its determination, EMC curve and EMC model.

Unit-II

Principle of drying, theory of diffusion, various drying rate periods - falling rate and constant rate period of drying, critical moisture content, heat transfer in grain drying, dryer performance, drying methods, classification of dryers and operation.

Unit-III

Importance of storage, types and causes of spoilage in storage, insect/pest of stored grains, changes occurring in food grains during storage Fundamental requirements of storage, traditional storage structures such as Morai, Bukhari, Kothar, mud Kothi etc., bag storage.

Unit-IV

Improved storage structures such as Pusa bin and CAP, temperature and moisture change in storage structures, Deep and Shallow bin, Introduction to grain storage design theories such as Jansen and Rankine, fumigations, controlled and modified atmosphere storage.

Practicals

1. Measurement of moisture content
2. Determination of EMC
3. Determination of ERH
4. Study the effect of temperature on stored grains
5. Study of solar dryer
6. Study of tray dryer
7. Study of fluid bed dryer

8. Measurement of relative humidity during drying
9. Study of drying rate period
10. Design and layout of commercial bag storage facilities
11. Design and layout of commercial bulk storage facilities
12. Study of different traditional storage structures
13. Study of different improved storage structures
14. Visits to commercial handling and storage facilities for grains.

Text Books/References

1. K K Singh and K.M. Sahay. (1996). Unit Operations in Agricultural Processing. Vikas Publishing House, New Delhi.
2. A.M. Michael and T.P. Ojha. Principles of Agriculture Engineering, Jain Brothers, Jodhpur
3. B.K. Bala. (2001). Drying and Storage of Cereal Grains. Oxford and IBH Publishing Co. Pvt. Ltd. New Delhi

PF 322 DAIRY AND FOOD ENGINEERING

To acquaint the students with various dairy engineering operations such as homogenization, pasteurization, thermal processing, evaporation, freezing and drying of milk.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Composition and properties: Dairy development in India, composition, thermal and chemical properties of milk and milk products.

Cream Separation and Homogenization: centrifugal cream separator, Effect of homogenization of milk, homogenization valve and pump, theory of homogenization, energy requirements, efficiency of homogenization.

Unit-II

Pasteurization: Definition of pasteurization, vat pasteurization; agitation and control in vat pasteurizers, advantages and disadvantages, Plate Heat Exchanger, HTST pasteurization and controls, UHT processing and sterilization.

Butter Handling Equipment: Principle of churning, Churn construction; types of churn,

Thermal processing of foods: Decimal reduction time, thermal death time, spoilage probability.

Unit-III

Evaporation: Atmospheric concentrators, vacuum pan, condenser, single and multiple effect evaporators, properties of liquid foods in evaporation, calculation of energy consumption in evaporators, performance evaluation of evaporators, vapour recompression systems.

Drying: Milk dryer, drum or roller dryer, spray dryer, atomization system, cyclone separator, bag filters, heat balance of drying equipment, equipments for instantizing milk powder.

Unit-IV

Freezing of foods: Freezing of foods, freezing point depression, calculation of freezing rate using plank's equation, freezing equipments viz. air blast freezer, plate freezer, immersion freezer.

Freeze drying: Freeze drying of foods, freeze dryer, calculation of freezing time.

Water activity: Role of water and water activity of foods, methods of determination of water activity, control of water activity by addition of solutes and dehydration.

Practicals

1. Study of a milk processing plant & equipments;
2. Study of pasteurizers;
3. Study of homogenizers;
4. Study of separators and butter churns;
5. Study of evaporators;
6. Study of milk dryers;
7. Study of freezers;
8. Determination of D and z value.
9. Determination of fat in milk.
10. Calculation of freezing time.
11. Determination of physical properties of food products;
12. Estimation of steam requirements;
13. Estimation of refrigeration requirements in dairy & food plant;
14. Visit to Food industry.

Text Books/References

1. Tufail Ahmed. (1997) Dairy Plant Engineering and Management. Kitab Mahal, New Delhi.

2. A.W. Farrall. Engineering for Dairy and Food Products; Robery, E. Krieger Publishers Company, New York.
3. R.T. Toledo. (1997). Fundamentals of Food Process Engineering. 2nd ed. CBS Publishers, New Delhi

ME 323 (AE) COMPUTER AIDED DESIGN AND MANUFACTURING

Computer graphics and tools for designing and drafting. Develop a good knowledge about construction of numerical control systems and machines. Develop a good knowledge about operation of numerical control systems and machines. Process planning and Part programming for manufacturing with CNC machines.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Design process, application of computers for design, definition of CAD, benefits of CAD. CAD system components. Computer hardware for CAD. Display, input and output devices.

Introduction to optimisation methods in design. Classical optimization techniques, maxima-minima etc. Optimal design of elements and systems. Role of optimisation techniques and finite element method in CAD. (Introductory treatment only)

Unit-II

Computer Graphics: Graphics primitives, display file, frame buffer, display control, display processors. Line generation, graphics software. Points and lines, DDA and Bresenham's line algorithms, antialiasing lines. Polygons, filling of polygons. Bresenham's algorithm for drawing circle and ellipse. Text primitive. Other primitives. Windowing and clipping, viewport. Homogeneous coordinates. Transformations.

Unit-III

Introduction to numerical control, basic components of NC system, NC coordinates and motion control systems. Computer numerical control, direct numerical control, combined CNC/DNC.

Unit-IV

NC machine tools and control units. Tooling for NC machines, Part programming, punched tape, tape coding and format, manual and computer assisted part programming.

Practicals: Two dimensional drafting exercises on AutoCAD or similar software, including dimensioning. Demonstration of CNC machine.

Texts/References:

1. Steven Harrington: Computer Graphics- A Programming Approach, McGraw Hill.
2. M. P. Groover and E.W. Zimmers: CAD/CAM- Computer Aided Design and Manufacturing, Prentice-Hall of India, New Delhi.

FE 324 TRACTOR SYSTEMS AND CONTROLS

Gaining knowledge about various tractor systems, their construction and working. Learning fundamentals of tractor chassis design and traction theory.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Study of transmission system: Clutch:single and multiple clutches and their functions, gear box: sliding and constant mesh, differential and final drive mechanism. Simple numerical problems on clutch and gear speed ratios.

Unit-II

Familiarization of brake mechanism: Mechanical and hydraulic. Steering: Ackerman and hydraulic. Hydraulic system of tractor: Automatic position and draft control.

Unit-III

Tractor power outlets: P.T.O., belt pulley, drawbar. Introduction to traction mechanics. Tractor chassis mechanics: C.G. determination and weight transfer. Simple numerical problems on tractor chassis mechanics.

Unit-IV

Tractor stability: Grade and non-parallel pull, turning at high speed. Simple numerical problems on tractor stability. Introduction to ergonomic considerations: Anthropometry and physiological cost measurements and tractor safety. Introduction to advances in tractor systems and controls.

Practicals

1. Introduction to transmission systems and components.
2. Study of clutch system.

3. Study of different types of gear box and calculation of speed ratios.
4. Study on differential and final drive of a tractor.
5. Study of brake system of a tractor.
6. Study of hydraulic system in a tractor.
7. Study of traction performance of a tractor wheel.
8. Anthropometric measurements of a farm worker.
9. Measurement of physiological cost of tractor operator during farm operation.
10. Study of advances in tractor systems and controls.

Text Books\References

FE 325 FIELD OPERATION AND MAINTENANCE OF FARM MACHINERY

Cr. Hrs. 2 (0 + 2)

	L	T	P
Credit	0	0	2
Hours	0	0	4

Practical:

1. Study and practising the hitching and dehitching of implements.
2. Field operation and field adjustments of m.b. plough and disk plough.
3. Field operation of disk harrow.
4. Field operation and adjustments of weeding equipment (Wheel hoe/power weeder).
5. Adjustment and maintenance of seeding and planting machines.
6. Field operation of seed drill/planter.
7. Adjustment and maintenance of a foot sprayer/knapsack sprayer.
8. Field operation, adjustment and maintenance of a vertical conveyor reaper.

9. Field operation, adjustments and maintenance of power thresher.
10. Adjustment and maintenance of a combine harvester.
11. Visit to small scale farm machinery manufacturing unit.

Text Books / References

1. Jacobs. Co. and William R.H., Agricultural power and machinery, Mc-Garw Hill Book Company
2. Service manuals of various agricultural machinery.

SW 326 IRRIGATION ENGINEERING

To enable the students to know about the ground water potential, its dynamic behaviour and exploration manual and mechanically.

Cr. Hrs.	4 (3 + 1)
	L T P
Credit	3 0 1
Hours	3 0 2

Section - A

Water resources development and utilization, Terminology and basic concepts in water resources, Physical properties of soil, Infiltration, Soil water potential. Soil moisture constants and characteristics curves, Measurement of soil moisture, Rooting characteristics and moisture use of crops.

Section - B

Consumptive use- terminology and determination by direct method ,Determination of consumptive use by climatological methods , Determination of reference crop Evapo transpiration by climatological methods ,Selection of crop coefficients and irrigation requirements ,Irrigation efficiencies ,Effective rainfall

Section - C

Irrigation scheduling and water management procedures for principal crops ,Measurement of irrigation water by volumetric, velocity area and tracer methods, Measurement of irrigation water by weir, orifices, flumes, Open channels – designs, Lining materials, precast concrete channels, water control and diversion structures

Section - D

Border method-Adaptability, limitations, Design and Evaluation, Furrow method-Adaptability, limitations, Design and Evaluation, Basin method-Adaptability, limitations, Design and Evaluation, Sprinkler method-Adaptability, limitations, Design and Evaluation, Drip method-Adaptability, limitations, Design and Evaluation

Practical's:

Department of Soil Moisture by Different Methods, Determination of physical properties of soil related to irrigation, Study of infiltration characteristics of soils, Estimation of evapotranspiration by empirical methods, Study of various farm irrigation structures, Measurement of discharge through weirs, orifices and flumes, fabrication of precast concrete channels, determination of water conveyer efficiency in case of an unlined channel, design and evaluation of border irrigation, furrow irrigation, sprinkler irrigation and drip irrigation method.

Text Books/References

1. A.M. Micheal, 1991, Irrigation Theory and Practices, Vikas Publishing House Pvt. Ltd., New Delhi
2. Lal R. and A.C. Datta 1971 Agricultural Engineering through Worked Examples, Saroj Publications, Allahabad
3. V.V.N. Murthy, 1985 Land and Water Management Engineering, Kalyani Publisher, New Delhi.

SW 327 DRAINAGE ENGINEERING

To train the students about the reclamation of the agricultural lands suffering from excessive water application and problematic soils.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Drainage, objectives of drainage, familiarization with the drainage problems of the state, Surface drainage, drainage coefficient, types of surface drainage, sub-surface drainage purpose and benefits of drainage.

Unit-II

Design of open channel, investigations of design parameters, hydraulic conductivity, drainable porosity, water table etc., types and use of subsurface drainage system.

Unit-III

Design of sub-surface drainage system, interceptor and relief drains. Derivation of ellipse (Hooghoudt's) and Ernst's drain spacing equations. types of sub-surface drainage system.

Unit-IV

Drainage materials, drainage pipes, drain envelope. Layout, construction and installation of drains. Drainage structures. Vertical drainage. Bio-drainage. Tile Drains. Drainage of irrigated and humid areas. Salt

balance, reclamation of saline and alkaline soils. Leaching requirements, conjunctive use of fresh and saline waters. Economic aspects of drainage.

Practicals

1. In-situ measurement of hydraulic conductivity.
2. Determination of drainage coefficients.
3. Installation of piezometer and observation well.
4. Preparation of iso-bath and iso-bar maps.
5. Measurement of hydraulic conductivity and drainable porosity.
6. Design of surface drainage systems.
7. Design of subsurface drainage systems.
8. Determination of chemical properties of soil and water.
9. Fabrication of drainage tiles.
10. Testing of drainage tiles.
11. Determination of gypsum requirement for land reclamation.
12. Installation of sub-surface drainage system.
13. Cost analysis of surface and sub-surface drainage system.

Text Books/References

2. Luthin, James N. (Editor) (1957). Drainage of Agricultural Lands, Agronomy Monograph No. 17, American Society of Agronomy, USA.
3. A.M. Michael and T.P. Ojha. Principles of Agricultural Engineering, Vol. II, Jain Publication, New Delhi.

EC 328 (AE) MICROPROCESSOR AND LOGIC CIRCUITS

Acquired knowledge about basics of digital electronics; solving problems related to number systems and Boolean algebra. Ability to identify, analyze and design combinational circuits. Ability to design various synchronous and asynchronous sequential circuits. Acquired knowledge about internal circuitry and logic behind any digital system; Microprocessors and its need. Ability to

identify basic architecture of different Microprocessors. Foster ability to write the programming using 8085 microprocessor; to understand the internal architecture and interfacing of different peripheral devices with 8085 Microprocessor; to write the programming using 8086 microprocessor. Foster ability to understand the internal architecture and interfacing of different peripheral devices with 8085 Microprocessor.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Computer Number Systems and Codes: Number System and their conversion, Negative Numbers representation, Binary Coded Decimal number, Excess-3 BCD Code, Gray Codes representation.

Logical Operation, Logic Gates and Boolean Algebra: Truth Table, Logical Operation and logic gates, Logic Circuit, Realizing Circuits From Boolean Expressions, Derived Logical Functions and Gates: The NAND Gate, The NOR Gate, The Exclusive - OR or XOR Gate, The Exclusive-NOR, or XNOR Gate, Boolean Algebra, Boolean Algebra Theorems, De Morgan's Theorems, Duality Theorem, Universal Gates.

Unit-II

Principles of Combinational Logic Circuits: Minterm and Maxterm designations, Canonical Forms, Karnaugh Map: Karnaugh Map upto 4 variables, Simplification of Boolean expressions using K-map in POS and SOP form, Incompletely Specified Functions (Don't Care Terms). *Arithmetic Circuit:* Adders, Subtractor, Digital comparator, Decoders, Encoders, Multiplexers.

Unit-III

Sequential Logic Circuits: Latches, Flip-flops: SR(Set-Reset) Flip-Flop, Edge-Detector Circuits, Master-Slave S-R Flip-Flop, J-K flip-flop, Master-Slave J=K Flip-flop, D Flip-Flop, T Flip-flop. Introduction to Register.

Unit-IV

Microprocessor: Introduction to Microprocessor, Basic Concepts of 4-8-16-32-64 bit μ p's. Evolution of Microprocessors. Internal architecture

and pin configuration of 8085A, Interrupt system of 8085A, Instruction Set of the 8085, Addressing modes of 8085A. Simple Assembly language programming of 8085A.

Interfacing Memory and I/O Devices: Address space partitioning; Address map; Address decoding, Memory mapped I/O scheme, I/O mapped I/O scheme. Memory interfacing, Data transfer schemes, Interrupts of 8085, Multiple Interrupts; Direct Memory Access. Application of microprocessors in Agriculture Engineering.

Practicals: As per theory

Text Books/References

1. R.S. Gaonkar. (1995). Microprocessor Architecture, Programming and applications with the 8085/8080A, Wiley Eastern Ltd., 2nd ed, Up date.
2. Aditya P. Mathur. (1999). Introduction to Microprocessor, 3rd ed., Tata McGraw, Hill Publishing Company Limited, New Delhi.
3. Dharm Singh. (2004). Introduction to Digital Logic Design, Yash Publishing House, Bikaner.

FOURTH YEAR B.TECH. (VII SEMESTER)

PF 411 FOOD PACKAGING TECHNOLOGY

To acquaint the students with various food packaging materials, various aspects of packaging methods and technology

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Significance of packaging, Spoilage mechanism during storage: environmental conditions favoring microbial growth, moisture sorption isotherm and water activity of foods; Food Packaging: definition, functions, importance and scope of packaging of foods, types and classification of packaging.

Unit-II

Packaging forms; Packaging materials: Plastic films, paper and paper boards, types and characteristics of papers, metal containers, feature of metal containers, three piece can, soldered side can, welded side can, two piece can. aluminum, advantages and disadvantages of aluminum.

Unit-III

Glass containers, properties of glass, types of glasses and glass containers, properties of glass containers; Printing processes: Letter press, offset, litho and gravure printing.

Unit-IV

Disposal methods of waste packaging materials; Vacuum and gas packaging-process and machines, packaging materials, gas barriers property, water vapor barrier property, applications in some foods; Active packaging, Estimation of shelf life of packaged foods.

Practicals

1. Identification of different types of packaging materials.
2. Determination of tensile strength of given material.
3. Determination of compressive strength of given package.
4. To perform different destructive tests for glass containers.
5. To perform non-destructive tests for glass containers.
6. Vacuum packaging of agricultural produces.
7. Determination of tearing strength of paper board.
8. Measurement of thickness of packaging materials.
9. To perform grease-resistance test in plastic pouches.
10. Determination of bursting strength of packaging material.
11. Determination of water-vapour transmission rate.
12. Shrink wrapping of various horticultural produce.
13. Testing of chemical resistance of packaging materials.
14. Determination of drop test of food package.

15. Visit to relevant industries.

Text Books/References

1. Takashi Kodoya. Food Packaging Academic Press, Inc.
2. R. C. Griffin, and S. Sacharow. Principles of Package Development. The AVI Publishing Company, Westport, Connecticut.

PF 412 DEVELOPMENT OF PROCESSED PRODUCTS

To acquaint the students with various methods and technologies of value addition to various food materials such as rice, oil, spices and extrusion

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Introduction to various processed products, value addition to rice, characteristics of structural materials, basic requirements for paddy grain storage, various methods for paddy storage, pretreatments to paddy grains and its basic concepts

Unit-II

Introduction to oil milling, traditional methods for oil milling such as village Ghanis, mechanical oil expeller, pretreatments for oil milling, various methods of oil milling for mustard, groundnut, AGMARK and I.S. standards.

Unit-III

Introduction to processing of various spices, processing of turmeric, processing of ginger, processing of cumin, processing of chilli, processing of coriander, processing of fenugreek, and processing of tamarind.

Unit-IV

Extrusion of foods – rheological properties of foods and operating characteristics, equipments, cold extrusion, extrusion cooking, effect on foods; Frying of foods-shallow and deep fat frying, equipments, effect on foods quality, Fermentation of foods- principles of fermentation, types of fermentors, equipments, quality of fermented foods.

Practicals

1. Study of Engleberg huller.
2. Study of single action drum cleaner.
3. Study of graders used in agro processing industries.
4. Study of paddy destoner.
5. Study of compact modern rice mill
6. Study of KVIC Ghani.
7. Study of mechanical oil expeller
8. Visit to Krishi Upaj Mandi.

9. Study of pin disc mill for spices.
10. Study of parboiling.
11. Visit to spice's processing industry.
12. Study of chilli milling.
13. Study of turmeric milling.
14. Study of coriander processing.

Text Books/References

1. E.V. Araulo, D.B. Padua and M. Rice Graham. Post Harvest Technology.
2. A. Chakravorty & D.E. De. (1998). Post Harvest Technology of Cereal and Pulses. Oxford & ISH Publishing Co. Pvt. Ltd., New Delhi.
3. P. Fellows. Food Processing Technology, Woodhead Publishing Limited.

PF 413 FOOD PROCESSING PLANT DESIGN & LAYOUT

To acquaint the students with various aspects of design and layout of food plant

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Introduction to plant design: Types of manufacturing processes, phases of plant design.

Plant location: levels of location problems, influence of location, location factors, plant site selection.

Unit-II

Industrial Buildings and grounds: Industrial buildings, building design and construction viz. floors, walls and windows, roof and ceilings; grounds and exterior facilities viz. Access highways and parking, rail access, access by water, landscaping, security, disaster protection.

Unit-III

Preparation of plant layout: layout problems, classes of layout problems, objectives, types of layout, optimization for plant layout, trends in plant layout, space requirement.

Development of the layout: Developing the plot plan, constructing the detailed layout, layout installation.

Unit-IV

Selection of processes, plant capacity, project design, flow diagrams, selection of equipments, process and controls

Material Handling: Importance, Kinds of conveyor systems, Plant layout for material handling, efficient use of material handling equipment, maintenance. Sanitary features of food processing plant.

Practicals

1. Planning, visit and layout of flour milling plant;
2. Planning, visit and layout of rice milling plant;
3. Planning, visit and layout of milk plant;
4. Planning, visit and layout of bakery plant;
5. Planning, visit and layout of fruits and vegetable dehydration plant;
6. Planning, visit and layout of beverages industry;
7. Planning, visit and layout of edible of extraction plant;
8. Planning, visit and layout of ice-cream plant;
9. Planning, visit and layout of sugar mill plant;
10. Planning, visit and layout of honey/turmeric/chillies processing plant.

Text Books/References

1. Chander, Lalat. (2004). Textbook of Dairy Plant Layout and Design. ICAR, New Delhi - 110012
2. A.W. Farallel. Food Engineering Systems. Vol 2-Utilities. AVI Publications.
3. J.M. Moore. Layout and Design. Macmillon Publishing Co., INC. New York.

PF 414 AGRICULTURAL STRUCTURES AND ENVIRONMENTAL CONTROL

To acquaint the students with various aspects of agricultural structures such as farm stead and dairy barn.

To acquaint the students with various aspects of environmental control and renewable and non-renewable resources of energy.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Planning and layout of farmstead, farm fencing, physiological responses of livestock, Environment conducive for the livestock and poultry.

Unit-II

Dairy barn design, site selection and layout of dairy barn, and poultry farm design, site selection and lay out of poultry farm.

Unit-III

Site selection and orientation of building in regard to sanitation, community sanitation system; sewage system- its design, design of septic tank for small family.

Unit-IV

Scope, importance and need for environmental control, renewable and non-renewable resources and their equitable use, concept of eco system, biodiversity of its conservation, environmental pollution and their control, solid waste management system.

Practicals

1. Instruments for measurements of environmental parameters.
2. Cooling load of a farm building e.g. poultry house.
3. Design and layout of a dairy farm.
4. Design and layout of a poultry house.
5. Design and layout of a sheep/goat house.
6. Design of a farm fencing system.
7. Design of ventilation system for dairy and poultry house.
8. Design of a feed/fodder storage structures.
9. Familiarization with local grain storage structures.
10. Design of grain storage structures.
11. Cost estimation of a farm building.

Text Books/Reference

1. Barre and Summet. Farm Structures.

PF 415 PRINCIPLES OF FOOD PRESERVATION

To acquaint the students with various methods of food preservation such as preservation by chemicals, thermal processing, Low temperature preservation, and drying of foods

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Sources of foods, scope and benefits of industrial food preservation, perishable and non-perishable foods, causes of food spoilage

Food preservation methods- salt and sugar, principle and method, preservation by chemicals, antioxidants, mold inhibitors, acidulants; Fermentation preservation-definitions, advantages and disadvantages, types of fermentations, equipments.

Unit-II

Thermal processing method – canning process for foods, D Value and Z value for microorganisms and nutrients, TDT curve, evaluation of process effectiveness by graphical method; Blanching-theory, equipments, effect on food quality such as nutrients, colour, flavour and texture; Pasteurization – theory, equipments , effect on foods quality; Sterilization- in container sterilization, theory, retorting, UHT process, aseptic process, effect of food quality; Evaporation of foods- theory and principles, boiling point elevation, equipments, effect on foods.

Unit-III

Low temperature preservation: chilling of foods- theory, equipments, chill storage; Freezing-ice crystal formation, solute concentration, freezing time, equipments, effect on food quality; Freeze concentration-principles and process, problems due to precipitation of solids, food applications, equipments; membrane concentration-techniques, equipments used, effect on foods, hurdle technology.

Unit-IV

Drying of foods- mechanism of drying, process, types of dryers, physical and chemical effect on foods; Irradiation of foods- theory, measurement of doses, dose distribution, effect on microorganisms, effect on foods, applications physical, chemical and biological methods of detections of irradiated foods.; introduction to pulsed electrical field processing, dielectric and ohmic-heating of foods, high process processing.

Practicals

1. Demonstration of various machineries used in processing.
2. Demonstration of blanching of foods.
3. Preservation of food by high concentration of sugar i.e. preparation of jam.
4. Preservation of food by using salt- Pickle.
5. Preservation of food by using acidulants i.e. pickling by acid, vinegar or acetic acid.
6. Preservation of Bread, Cake using mold inhibitors.
7. Preservation of coconut shreds using humectants.
8. Drying of pineapple slices, apple slices in cabinet drier.
9. Demonstration on drying of green leafy vegetables.
10. Drying of Mango/other pulp by foam mat drying.
11. Demonstration of spray drying of a liquid food.
12. Drying of foods using freeze-drying process.

13. Demonstration of preserving foods by freezing process.

Text Books/References

1. P. Fellows. Food Processing Technology, Woodhead Publishing Limited, England.

PF 416 HORTICULTURAL CROP PROCESSING

To acquaint the students with various aspects of horticultural crop processing such as processing scenario of fruits and vegetable, preparation of jam, jelly, marmalade and candy of fruits and drying of vegetables

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Production and processing scenario of fruits and vegetable: India; Scope of Fruit and Vegetable Preservation Industry in India. Present status, constraints and prospectus. Overview of principles and preservation methods of fruits and Vegetables. Processing of Canned fruits and vegetables.

Unit-II

Preparation of Jam, Jelly and Marmalade of various fruits such as Guava, Grape, Aonla, Carrot and Citrus fruits. Preservation by heat treatment, addition of sugar, acids and flavour, boiling under vacuum, end point and storage. Extraction and Preservation of fruit juice and squash of the following fruits: Guava, Grape Aonla, Wood apple, Citrus fruits.

Unit-III

Preparation of candy of different types of fruits such as Citrus fruits, Aonla, Ginger, Papaya and Carrot. Processing technology for powder making of various fruits such as Aonla, Mango, Banana. Processing technology of vegetables for various products viz. Tomato: Ketchup, sauce, puree.

Unit-IV

Dried Leafy Vegetables viz. Spinach, Fenugreek, Coriander leaves, etc
Quality control: Food Laws and regulation in India, PFA Act, FPO Act, AGMARK, HACCP, ISO-2000, CAC (Codex Alimentarius, commission), BIS.

Practicals

1. Canning of Mango/Guava/Papaya.
2. Preparation of Fruit Jam: Guava,
3. Preparation of fruit Jelly

4. Preparation of fruit marmalade.
5. Preparation of fruit squash (Lemon)
6. Preparation of fruit RTS
7. Preparation of fruit syrup.
8. Preparation of grape raisin, dried fig and dried banana.
9. Preparation of pickle
10. Preparation of dried ginger
11. Preparation of dried onion/ garlic,.
12. Preparation of Potato wafers.
13. Dehydrated leafy vegetable.

Text Books/References

1. Girdhari Lal, G S Siddappaand, G L. Tandon. Preservation of fruits and vegetables. Publication ICAR, New Delhi - 110012.
2. W.V. Cruess. Commercial Fruit and Vegetable Products, Agrobios (India).

SW 411 MICRO IRRIGATION SYSTEMS DESIGN

To train the students about the field specific for design of Drip and Sprinkler Irrigation system, their proper operation and the maintenance of the system

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Past, present and future need of micro-irrigation systems, Role of Govt. for the promotion of micro-irrigation in India, Merits and demerits of micro-irrigation system, Types and components of micro-irrigation system.

Unit-II

Micro-irrigation system- design, design synthesis, installation, and maintenance. Sprinkler irrigation - types, planning factors, uniformity and efficiency, laying pipeline, hydraulic lateral, sub-mains and main line design, pump and power unit selection.

Unit-III

Drip irrigation – potential, automation, crops suitability. Fertigation – Fertilizer application criteria, suitability of fertilizer compounds, fertilizer mixing, injection duration, rate and frequency, capacity of fertilizer tank. Quality control in micro-irrigation components,

Unit-IV

Design and maintenance of polyhouse; prospects, waste land development – hills, semi-arid, coastal areas, water scarce areas, Benefit and Cost analysis.

Practicals

1. Study of different types of micro-irrigation systems and components.

2. Field visit of micro-irrigation system.
3. Study of water filtration unit.
4. Discharge measurement study of different micro-irrigation systems.
5. Study of water distribution and uniformity coefficient.
6. Study of wetted front and moisture distribution under various sources of micro-irrigation system.
7. Design of micro-irrigation system for an orchard.
8. Design of micro-irrigation system for row crops design of spray type micro-irrigation system.
9. Design of micro-irrigation system for hilly terraced land.
10. Study of automation in micro-irrigation system.
11. Study of micro climate inside a Polyhouse.
12. Study of maintenance and cleaning of different components of various systems.
13. Design of sprinkler irrigation system.
14. Design of landscape irrigation system

SW 412 WATERSHED PLANNING AND MANAGEMENT

To acquaint the students about the preparation of the detail report of the problems and causes related to the water, land, vegetation and social aspects of specific area and their remedies through watershed planning and management.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Watershed management - problems and prospects; watershed based land use planning, watershed characteristics—physical and geomorphologic, factors affecting watershed management, hydrologic data for watershed planning, watershed delineation, delineation of priority watershed.

Unit-II

Water yield assessment and measurement from a watershed; hydrologic and hydraulic design of earthen embankments and diversion structures; sediment yield estimation and measurement from a watershed and sediment yield models.

Unit-III

Rainwater conservation technologies - in-situ and storage, design of water harvesting tanks and ponds; water budgeting in a watershed; effect of cropping system, land management and cultural practices on watershed hydrology.

Unit-IV

Evaluation and monitoring of watershed programmes; people's participation in watershed management programmes; planning and formulation of project proposal; cost benefits analysis of watershed programmes; optimal land use models; case studies.

Practicals

1. Study of watershed characteristic.
2. analysis of hydrologic data for watershed management.
3. Delineation of watershed and measurement of area under different vegetative and topographic conditions.
4. Measurement of water and sediment yield from watershed.
5. Study of different watershed management structures.
6. Study of various water budget parameters.
7. Study of watershed management technologies.
8. Preparation of a techno-economically effective project proposal.

Text Books/References

SW 413 MINOR IRRIGATION AND COMMAND AREA DEVELOPMENT

To train the students for design of site specific lift irrigation system as per availability of water and command area on community basis.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Major, medium and minor irrigation projects – their comparative performance; development and utilization of water resources through different minor irrigation schemes.

Unit-II

Basic concepts of command area – definition, need, scope, and development approaches: historical perspective, command area development authorities.

Unit-III

Interaction/collaboration of irrigation water use efficiency and agricultural production. Planning and execution of on farm development activities within the scope of command area development.

Unit-IV

Use of remote sensing techniques for command area development; case studies of some selected commands; Farmers participation in command area development.

Practicals

1. Topographic survey and preparation of contour map.
2. Preparation of command area development layout plan.
3. Land leveling design for a field.
4. Earthwork and cost estimation.
5. Irrigation water requirement of crops.
6. Preparation of irrigation schedules.
7. Planning and layout of water conveyance system.
8. Design of Irrigation systems.
9. Conjunctive water use planning.
10. Application of remote sensing for command area development.
11. Technical Feasibility and economic viability of a command area project.
12. Study tour to minor irrigation and command area development projects.

Text Books/References

6. B.C. Punmia and B.L. Pande. (1983). Irrigation and Water Power Engineering, Standard Publishers Distributors, Delhi.

SW 414 GULLEY AND RAVINE CONTROL STRUCTURES

To train the students about the understanding of extent of erosion, losses thereon and stabilization of gullies and ravines and rehabilitation of the affected area.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Introduction; floods - causes of occurrence, flood classification - probable maximum flood, standard project flood, design flood, flood estimation - methods of estimation; estimation of flood peak - Rational method, empirical methods, Unit hydrograph method.

Unit-II

Statistics in hydrology, flood frequency methods - Log normal, Gumbel's extreme value, Log-Pearson type-III distribution; depth-area-duration analysis; flood forecasting, flood routing - channel routing, Muskingum method, reservoir routing, modified Pul's method.

Unit-III

Flood control - history of flood control, structural and non-structural methods of flood control measures, storage and detention reservoirs, levees, channel improvement.

Unit-IV

Gulley erosion and its control; soil erosion and sediment control measures; river training works, planning of flood control projects and their economics.

Practicals

1. Determination of flood stage-discharge relationship in a watershed.
2. Determination of flood peak-area relationships.

3. Determination of frequency distribution functions for extreme flood values using Gumbel's method.
4. Determination of frequency distribution functions for extreme flood values using log-Pearson Type-III distribution.
5. Determination of confidence limits of the flood peak estimates for Gumbel's extreme value distribution.
6. Determination of probable maximum flood.
7. Standard project flood and spillway design flood.
8. Design of levees for flood control.
9. Design of jetties.
10. Study of vegetative and structural measures for Gully stabilization.
11. Designing and planning of a flood control project.
12. Cost and benefit analysis of a flood control project.

Text Books/References

1. R.V. Singh. (2003). Watershed Planning and Management, Second Edition Yash Publishing House, Bikaner. P. 624.
2. P.K. Singh. (2000). Watershed Management (Design and Practices), e-media Publication, Udaipur. P. 174.
3. V.V.N. Murty. (1985). Land and Water Management Engineering, Second Edition Kalyani Publisher, Ludhiana. P.586.

5. Ullah, Wasi, S.K. Gupta and S.S. Dalal. (1972). Hydrological Measurements for Watershed Research, Jugal Kishore and Co., Dehradun.

SW 415 REMOTE SENSING AND GIS APPLICATION

To train students in use of various hardware and software in use of satellite data, GPS technology in developing GIS based out puts for resource mapping and planning studies.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Aerial photography- aerial photograph, their classification, map v/s aerial photograph, photogrammetry and its application, aerial

photography mission, planning and design, stereoscopic vision. Elements of aerial photo interpretation, aerial photo interpretation for water resources development and soil conservation survey

Unit-II

Remote sensing- definition, electromagnetic radiations, Interactions with the Atmosphere,

Passive v/s Active Sensing, Characteristics of Images, Satellite and Sensors-Satellite Characteristics, Resolution, Multi-spectral Scanning, Thermal Imaging, Satellite missions, microwave sensing, Image Analysis- Visual interpretation, Digital image processing, image, Enhancement and Classification

Unit-III

GIS- definition, basic components, data types- spatial, non- spatial, GIS data modeling, vector and raster representation, GIS data base management, GIS data file management

Unit-IV

GIS data input and editing- data input methods, scanning, digitization, GPS data, data editing, errors and data reduction, Data analysis- format conversion, spatial measurement, overlay analysis and data output

Practical's:

Study of aerial photographs under mirror stereoscope and preparation of stereo model of aerial photograph, land use/cover studies through aerial photograph, use of optical scanners and digitizers, use of GPS in mapping and GIS data input, satellite data product, familiarization with image processing and GIS software's and their applications.

Text books/references

1. K.K. Rampal. (1999) Hand Book of Aerial Photography and Interpretation, Concept Publishing Company, New Delhi

SW 416 RESERVOIR AND FARM POND DESIGN

To acquaint the students about the importance of the water harvesting, means to harvest the water and designing of site specific water harvesting structures.

Cr. Hrs. 3 (2 + 1)

**L T P
Credit 2 0 1**

Unit-I

Earthen embankments - functions, advantages and disadvantages, classification - hydraulic fill and rock fill dams - homogeneous, zoned and diaphragm type; foundation requirements, grouting.

Unit-II

Seepage through dams - estimation of seepage discharge, location of seepage/phreatic line by graphical and analytical methods, flow-net and its properties, seepage pressure, seepage line in composite earth embankments, drainage filters, piping and its causes.

Unit-III

Design and construction of earthen dam, stability of earthen embankments against failure by tension, overturning, sliding etc.

Unit-IV

Stability of slopes - analysis of failure by slice method; types of reservoirs and farm ponds, design and estimation of earth work; cost analysis.

Practicals

1. Study of different types and materials of earthen dams.
2. Determination of the position of phreatic line in earth dams for various conditions.
3. Stability analysis of earthen dams against head water pressure.
4. Stability analysis of earthen dams against foundation shear.
5. Stability analysis of earth dams against sudden draw down condition.
6. Stability of slopes of earth dams by friction circle method / different methods.
7. Construction of flow net for isotropic and anisotropic medium.
8. Computation of seepage by different methods.
9. Determination of settlement of earth dam.
10. Input-output-storage relationships by reservoir routing.
11. Design of farm ponds.
12. Cost estimation of farm ponds and other structures.

Text Books/References

1. Ghanshyam Das. (2000). Hydrology and Soil Conservation Engineering. Prentice Hall of India, New Delhi.
2. R. Suresh. (2002). Soil and Water Conservation Engineering, Fourth Edition, Standard Publishers and Distributors, Delhi.

4. P.K. Singh. (2000). Watershed Management (Design and Practice), e-media publications, Udaipur.

SW417 GROUND WATER RECHARGE TECHNOLOGY

To train the student about the latest method of groundwater recharge, their impact evaluation and monitoring the quality of groundwater.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Concept of artificial recharging.

Basic Phenomena of ground water recharge, selection of site and identification of recharge structures, Natural recharging.

Unit-II

Artificial recharge structures, Direct surface technique– Flooding, Basin or Stream augmentation, Ditch & furrow method, Over irrigation. Direct sub surface technique – Injection well, Recharge pit and shaft, Dug well recharge, Sub surface dykes.

Unit-III

Roof top rain water harvesting – Design of filter and estimation of size of pipe, runoff potential and size of tank.

Unit-IV

Design criteria of recharge structures, Design and cost estimation of recharge structures, use of RS & GIS for identification of potential artificial recharge Zones.

Practicals

1. Analysis of rainfall for estimation of probability of occurrence of rainfall.
2. Estimation of surface runoff from various surfaces e.g. RCC flooring, barren land Katchha roof, cultivated land etc. (Soil cover complex method).
3. Estimation of quantity of available water for rain water harvesting based of the area, topography and condition of the site.
4. Design of the rooftop rain water harvesting structure
5. Design of rain water harvesting of road and kutchha flooring.
6. Design of subsurface rainwater harvesting at river bed.
7. Design of the injection well harvesting structure
8. Study of the various types of filters for rainwater harvesting
7. Estimation of the materials for the rainwater harvesting structure
8. Testing of the material used for rainwater harvesting
9. Case studies of the existing rainwater harvesting structures.

Suggested readings

1. Todd D.K. (2004), Ground water hydrology, second edition. John Wiley & sons New York.
2. Jat M.L. and S.R. Bhakar (2009), Ground water hydrology, Agrotech publishing academy Udaipur.

SW 418 PLASTICULTURE TECHNOLOGY IN AGRICULTURE

Students are exposed with the technology to design micro irrigation fertigation system greenhouse design, environment control for efficient management of crop to increase productivity.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit I

BIS standards in plastic materials. Introduction of Plasticulture, Types and quality of plastics used in agriculture, Present status of plastic materials and future prospective of Plasticulture in India, Agencies involved in the promotion of Plasticulture at National and state level. Government Policies in Use of plastics.

Unit II

Use of plastics in water conveyance – pipes and fittings. Plastics in water management e.g. mulching, micro irrigation, sprinkler, spray guns etc. Plastic in insitu conservation – mulching, and roof top rain water harvesting Plastics in drainage pipes and filter materials Plastic films in canal lining and in reservoir.

Unit III

Plastic in nursery raising, Plastic in protected cultivation, poly houses, low tunnels and crop covers. Plastic net in crop protection, anti insect nets, bird protection and plastic fencing. Innovative packaging solutions- Leno bags, carets and vacuum packaging. Plastic cover for storage of food grains in open and storage bins.

Unit IV

Use of plastic in farm equipments and machineries-sprayers, seed drill tubes and other spare parts of equipments and machineries. Plastic vermin-beds. Plastic gobber gas unit Silage film technique for fodder storage. Biodegradable plastic for crop production Use of plastic in farm sheds, animal sheds and poultry houses.

Practical

- 1-2 Study of various plastic materials.
- 3-4 Design and estimation of plastic lined farm pond.
- 5-6 Estimation of requirements of plastic pipe and other components of drip, sprinkler and other micro irrigation systems.
- 7-8 Laying and cleaning of drip laterals.
- 9-10 Plastic mulch laying,
- 11-12 Construction of low tunnels,
- 13-14 Use of leno bags, design, installation and cost estimation of cap cover.
- 15-16 Use of silage film for fodder preservation,
- 17 Visit to nearby PVC pipe manufacturing unit/dealer/farmer's field, sprinkler manufacturing unit/dealer, polyhouse, shadenet house.

Suggested Readings

1. Mane M.S. and B.L. Ayare (2007). Principles of sprinkler irrigation. Jain brothers New Delhi.
2. Mane M.S., B.L. Ayare and S.S. Magar (2008). Principles of Drip Irrigation System. Jain brothers New Delhi.
3. Rajput TBS and Neelam Patel (2007) Micro Irrigation Manual. Precision Farming Development Centre, Water Technology Centre, IARI, New Delhi.
4. Salokhe V.M. and A.K. Sharma (2006) Green House Technology and Management. Agrotech Publishing House, Udaipur.
5. Taft L.R. 2008. Green House management. Biotech Books, Delhi – 110035.

FM 411 TRACTOR DESIGN AND TESTING

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Introduction to development of agricultural tractor. Study of parameters for balanced design of tractor for stability, weight distribution and hitch system.

Unit II

Design of various engine components: piston, cylinder and cylinder liner, connecting rod, crankshaft and valve.

Unit-III

Design of mechanical power transmission in agricultural tractors. Design of Ackerman Steering. Introduction of computer application to design of engine components, differential, final drive and axle power takeoff shaft.

Unit-IV

Design of seat and controls of an agricultural tractor. Tractor Testing as per BIS codes.

Practicals

1. Design problem of tractor clutch.
2. Design problem on spur gears.
3. Design problem of bevel gears.
4. Design problem of helical gears.
5. Design of gear box (synchromesh/constant mesh).
6. Selection of tractor tires – Problem solving.
7. Problem on design of governor.
8. Engine testing as per BIS code – various tests; Drawbar performance in the lab; PTO test and measure the tractor power in the lab/field.
9. Visit to tractor testing centre/industry.

Text Books/References

1. A. Kolchin and V. Dominov. (1984). Design of Automotive Engines. Mir Publications, Moscow.
2. B.J. Liljedahl, P.K. Turnquist, W.D. Singh and Hoki, Makato. (1989). Tractor and there Power Units, Fourth Edition, Avi Publication, New York.

4. V.L. Maleev. (1951). Internal Combustion Engines, McGraw Hill Pub., New York.

FM 412 HYDRAULIC DRIVES AND CONTROLS

Basic knowledge of hydraulic system of tractor its operation and maintenance Detailed information of different components of hydraulic system and construction of hydraulic circuits. Selection criteria of different hydraulic components. Common calculations for load and capacity of the system components.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit I

Principles of Hydraulics: Hydraulic Basics: Pascal's Law, Flow, Energy, Work, and Power. Working of Hydraulic Systems, Open centre and close centre hydraulic systems, Reservoirs, Strainers and Filters, Filtering Material. Types of hydraulic Fluid and their properties.

Unit II

Pumps: Pump Classifications, selection, Performance, Displacement, Gear Pumps, Vane Pumps, Piston Pumps, Pump Operation. Hydraulic Actuators: Cylinders-displacement, Construction and Applications, Semi rotary actuators. Simple numerical problems on pumps.

Unit III

Hydraulic Motors. Accumulators: Types and working. Fittings and Connectors. Hydraulic valves: Pressure-Control Valves, Directional-Control Valves, Flow-Control Valves, Valve Failures and Remedies, Valve Assembly.

Unit IV

Hydraulic Troubleshooting. Tractor hydraulics, nudging system, ADDC. Use of Hydraulics and Pneumatics drives in agricultural systems. Maintenance of hydraulic system.

Practical

1. Introduction to Hydraulic Systems.
2. Study of Hydraulic Pumps.
3. Study of Hydraulic Actuators.
4. Study of Hydraulic Motors.
5. Study of Hydraulic Valves.
6. Maintenance of hydraulic system.
7. Hydraulics in Tractors.
8. Pneumatics in Agriculture.

Text Books/References

Getting knowledge of Farm Mechanization scenario and report writing. Learning selection of farm machinery on the basis of various requirements, their costing and replacement.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Farm Mechanization: Objectives and myths. The role of mechanization and its relationship to productivity, employment, social and technological change.

Unit-II

Agricultural Machines Capacities: Rates of work, Field efficiency and factors affecting it, Calculations of machine capacities and field efficiency for different field conditions and machines.

Unit-III

Selection of machinery from a capacity standpoint; Estimating power and fuel requirements, Selecting tractors and implements from power requirement standpoint; Selection of optimum width of machinery, timeliness of operation.

Unit-IV

Cost analysis of machinery: fixed cost and variable costs; Replacement of farm machine; mechanization planning; case studies of agricultural mechanization in India.

Practicals

1. Solving problems related to various capacities, pattern efficiency, system limitation, power requirement and other operational parameters.
2. Solving of problems related to cost analysis.
3. Solving problems related to selection of equipment and replacement.
4. Presentation of seminar on topic assigned related to farm machinery management.
5. Design of farm mechanization plan for different farm size and cropping pattern.

Text Books/References

1. Hunt, D, Farm Power and Machinery Management, Lows State University Press, USA, 1979
2. Culpin, C, Profitable farm Mechanization, Lock Wood & Sons, London, 1996

3. Bainer, R. Barger, E.L. and R.A. Kepner 1997. Principles of Farm Machinery. John Wiley & Sons, Inc, New York,
4. Shrivastava A.C. et al. Principle of Farm Machinery ASAE publications.

FM 414 HUMAN ENGINEERING AND SAFETY

Exposure to human factors for engineering design, measurement of energy cost of different activities. Use of anthropometric parameters in designing of different agricultural machines and equipments. Knowledge of ergonomic assessment of different working environment

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Human factors in system development – concept of systems; basic processes in system development, performance reliability, human performance. Information input process, visual displays, major types and use of displays, auditory and factual displays.

Unit-II

Measurement of energy, direct and indirect methods. Energy cost of different activities and Acceptable work load. Noise and vibration, its measurement and control.

Unit-III

Anthropometry: arrangement and utilization of work space, atmospheric conditions, heat exchange process and performance.

Unit-IV

Dangerous machine (Regulation) act, Rehabilitation and compensation to accident victims, Safety gadgets for spraying, threshing, Chaff cutting and tractor & trailer operation etc.

Practicals

1. Calibration of the subject in the laboratory using bi-cycle Ergometer as loading device versus different physiological parameters.
2. Calibration of the subject in the laboratory using mechanical treadmill as loading device versus different physiological parameters.
3. Study of Respiration gas meter and its use in selected farm operation and their comparison from energy point of view.
4. Calibration of the subject using Heart Rate Monitor in farm operation.
5. Study of general fatigue of the subject using Blink ratio method.
6. Anthropometric measurements of a selected group of farm

workers and its statistical analysis.

7. Study of optimum work space layout and locations of controls of different factors. Familiarization with the noise and vibration equipment.

Text Books/References

1. P.O. Astrant and K. Rodhal. (1970). A Test Book of Work Physiology. McGraw Hill Book Co., New York.
2. E.J. Mc Cormic. (1979). Human Factors in Engineering Design. Tata McGraw Hill Pub., Co., New Delhi.
3. J.A. Roebuchk. K.H.E. Kroenor and M.S. Thomson. Engineering Anthropometry, John Willey & Sons, New Delhi.

FM 415 MECHANICS OF TILLAGE AND TRACTION

Mechanics of soil cutting. Traction force, torque-slip relationship and traction aid for tractor and other traction machineries

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Introduction to mechanics of tillage tools, engineering properties of soil, design of tillage tools principles of soil cutting, design equation.

Unit-II

Introduction to traction mechanics, Measurement and characterization of terrain behaviour: stress-strain relationship, pressure sinkage relationship and cone penetrometer.

Unit-III

Motion resistance of a rigid and pneumatic wheel, Mechanics of towed, self propelled and driving wheel; Wheel slip, its measurement; Criteria of performance of traction devices.

Unit-IV

Traction prediction approach: Mobility number & effect of mobility number on tractive effort, traction improvement, tyre construction: bias and radial , tyre testing, soil compaction.

Practicals

1. Measurement of static and dynamic soil parameters related to tillage.

2. Measurement of slip and sinkage under dry and wet soil conditions.
3. Measurement of load and fuel consumption for different farm operations.
4. Studies on tyres under different conditions.
5. Studies on compaction and number of operations.

Text Books/References

1. W.R. Gill and Vanden Berg. (1968). Soil Dynamics in Tillage, Handbook No. 316, US Department of Agriculture, USA.
2. M.G. Bekker. (1956). Theory of land Locomotion , University of Michigan Press, USA.
3. M.G. Bekker. (1969). Off-Road Locomotion, University of Michigan Press USA.

5. J.Y. Wong. (1978). Theory of Ground Vehicle, John Willey & Sons, New York.

FM 416 LAND DEVELOPMENT AND GRADING

Planning of land levelling operation, CPM and AOA diagram. Knowledge and use of different earth moving machineries used for land levelling operation

Cr. Hrs. 3 (3 + 0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Land leveling-Criteria for land leveling, plane profile, plane inspection and contour adjustment methods, land leveling design problems related to land leveling design and earth work calculation.

Engineering fundamentals related to earth-moving machinery.

Unit-II

Earth moving and excavation machines classification and application of bulldozers, advantage and disadvantage, straight and angle bulldozers, moving earth with bulldozers and estimation of output of a bulldozer numerical problems.

Land clearing equipments, Power shovel: Construction and operation of power shovel size selection of power shovel factors affecting the output of a power shovel.

Unit-III

Scraper: Types, construction and operation of scrapers, size of the scraper, cycle time production rates of scrapers, numerical problems, load-growth curve and estimation of output of a scraper.

Dragline: Types of dragline, size basic parts and operation of a dragline, output of a dragline, estimation of output, effect of different factors on output, numerical problems.

Clam shell: Basic parts and operation of a clam shell, application, size and output of a clam shell.

Motor grader: Construction and operation of motor grader, application, basic adjustment parameters of major grader, output of motor grader,

Unit-IV

Trenching machines: types, construction and operation of wheel and ladder type trenching machines, selection of suitable equipment for excavating trenches and production rates of trenching machines.

Compactors: Properties-swell and shrinkage type of compacting equipment and construction details.

Job planning and management: Project network analysis, definitions of terms used in critical path method (CPM), critical path scheduling, AOA diagram, computerized scheduling.

Text Books/References

1. R.L. Peurifoy. Construction, Planning, Equipment and Methods.
2. Mahesh Verma. Construction equipment and its planning and application.
3. Jagman Singh. Heavy construction, planning, equipment and methods.
4. A.M. Michael. Irrigation theory and practices.

FM 417 PESTICIDES APPLICATION AND EQUIPMENT

Knowledge of pesticide application machineries. Operation, repair and maintenance of pesticide application equipments. Assessment of performance and safety during use of pesticide application equipments

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Fundamentals of Pesticide application, Sprayers- manually and power operated – types-construction operations, calibration, Introduction to electrostatic and ULV sprayers.

Unit-II

Air assisted sprayers, High clearing sprayers, Dusters: manually and power operated – types- construction, operation, calibration.

Unit-III

Atomizing devices, nozzles, types, flow rates, spray angles, droplet size, agitations of spray material, Arial spray application- Limitation and advances, air crafts spraying and dusting equipment. Measurement of efficiency of pesticide application- collection and measurement of droplets- determination of vmd.

Unit-IV

Factors for selection of sprayer/duster and planning pesticide application. Safety in pesticide application- selection of pesticide – storage and handling of protective devices.

Practicals

1. Study of various types of nozzles
2. Study of manually operated sprayers.
3. Study of power operated sprayers.
4. Study of manually operated dusters.
5. Study of power operated dusters.
6. Calibration of sprayers.
7. Calibration of dusters.
8. Testing of different types of nozzles.

Text Books/References

2. H. Singh and O.S. Bindra. (1980). Pesticides and Application Equipment, Oxford & IBM Publication Co.
3. P.R. Mathew. Pesticides Application and Equipment.

RS 411 RENEWABLE POWER SOURCES

The course enables the student to outline the power generation potential from various renewable energy sources and performance evaluation of these devices.

Cr. Hrs. 3 (2 + 1)

L T P

Unit-I

Energy consumption pattern & energy resources in India. Renewable energy options, potential and utilization.

Unit-II

Biogas technology and mechanisms, generation of power from biogas, Power generation from urban, municipal and industrial waste.

Unit-III

Solar thermal and Photovoltaic. System for power generation. Central receiver (Chimney) type solar plant, OTEC, MHD, hydrogen and fuel cell technology.

Unit-IV

Wind farms. Aerogenerators. Wind power generation system. Power generation from biomass (gasification & Dendro thermal), Mini and micro small hydel plants.

Practicals

1. Performance evaluation of solar water heater.
2. Performance evaluation of solar cooker.
3. Characteristics of solar photovoltaic panel.
4. Evaluation of solar air heater/dryer.
5. Performance evaluation of biomass gasifier engine system (throatless & downdraft).
6. Performance evaluation of a fixed dome type biogas plant.
7. Performance evaluation of floating drum type biogas plant.
8. Estimation of calorific value of biogas & producer gas.
9. Testing of diesel engine operation using dual fuel and gas alone.

RS 412 GREENHOUSE TECHNOLOGY

Benefits and advances in maintaining growth parameters for protected cultivation and of-season agriculture is highlighted through this course for entrepreneurship development.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

History and types of greenhouse; importance, function and features of green house; scope and development of green house technology, applications of greenhouse.

Unit-II

Location, Planning and various components of greenhouse; design criteria and calculation; constructional material and methods of construction; covering materials and its characteristics, instrumentation & computerized environmental Control Systems.

Unit-III

Solar heat transfer, solar fraction for green house, steady state analysis of greenhouse, Greenhouse heating, cooling, shedding and ventilation systems; Carbon Dioxide generation and monitoring and lighting systems, repair & maintenance of greenhouse.

Unit-IV

Watering, fertilization, root substrate and its pasteurization, containers and benches, plant nutrition. Alternative cropping systems; plant tissue culture, chemical growth regulation; disease control; integrated pest management; postproduction quality and handling, Cost analysis of greenhouse production.

Practicals

1. Study/visit to a functional green house.
2. Planning and layout of green house & associated utilities.
3. Material selection for the construction of greenhouse.
4. Measurement of temperature using thermomseter, thermistor & thermocouples inside the green house.
5. Measurement of humidity & air velocity using various methods.
6. Measurement of solar radiations inside the green house.
7. Application of psychometric charts.
8. Estimation of cooling requirements in a green house.
9. Estimation of ventilation requirements.
10. Thermal performance of greenhouse.
11. Application of data loggers for simultaneous estimation & control of different parameters like temp., RH, solar radiations etc..
12. Calculations of environment indices inside a green house.
13. Structural analysis of greenhouse; Economic analysis of greenhouse.
14. Visit to a commercial greenhouse.

RS 413 ENVIRONMENTAL ENGINEERING

This course is designed to expose the students towards sanitation, health and waste management aspects giving practical insight towards analysis of various pollution causing permanents and their control.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Importance of safe water supply system. Domestic water requirements for urban and rural areas. Sources of Water supply. Intakes and transportation of water.

Unit-II

Drinking water quality. Indian Standards of drinking water. Introduction to water treatment for safe drinking, Importance of sanitation.

Unit-III

Domestic waste water: quantity, characteristics, disposal in urban and rural areas. Sewer: types, design discharge and hydraulic design. Introduction to domestic wastewater treatment.

Unit-IV

Solid waste: quantity, characteristics and disposal for urban and rural areas. Introduction to air pollution. Types of pollutants, properties and their effects on living beings. BIS standards for pollutants in air and their abetments.

Practicals

1. Determination of turbidity.
2. pH of solution; Suspended solids.
3. Dissolved solids.
4. Total solids.
5. Temporary hardness.
6. Permanent hardness.
7. Fluorides.
8. Chlorides, dissolved oxygen.
9. BOD.
10. Collection of air samples and their analysis.

11. Numerical problems related to theory.
12. Visit to treatment plant.

Text Books/References

RS 414 WASTE AND BY-PRODUCT UTILIZATION

The course is designed to generate awareness on recycling and energy recovery from different wastes and by-products from household, municipal or industrial sectors. It is useful in creating confidence on reduced dependence of fossil fuel based economy.

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Types and formation of byproducts and waste; magnitude of waste generation in different agro- processing industries; concept scope and maintenance of waste management and effluent treatment, basics of Waste Recycling & Resources Recovery System (WRRRS), Temperature, pH, Oxygen demands (BOD, COD), fat, oil and grease content, metal content, forms of phosphorous and sulphur in waste waters, microbiology of waste, other ingredients like insecticide, pesticides and fungicides residues.

Unit-II

Waste utilization in various industries, furnaces and boilers run on agricultural wastes and byproducts, briquetting of biomass as fuel, production of charcoal briquette, generation of electricity using surplus biomass, producer gas generation and utilization.

Unit-III

Waste treatment and disposal, design, construction, operation and management of institutional community and family size biogas plants, concept of vermi-composting, Pre-treatment of waste: sedimentation, coagulation, flocculation and floatation, Secondary treatments: Biological and chemical oxygen demand for different food plant waste-trickling filters, oxidation ditches, activated sludge process, rotating biological contractors, lagoons.

Unit-IV

Tertiary treatments: Advanced waste water treatment process-sand, coal and activated carbon filters, phosphorous, sulphur, nitrogen and heavy metals removal, Assessment, treatment and disposal of solid waste.

Practicals

1. Waste characterization: (a) temperature (b) pH (c) solids content (d) turbidity (e) BOD (f) COD; Determination of ash content of agric. Wastes.
2. Determination of unburnt carbon in ash of paddy straw.
3. To study about briquetting of agricultural residues.
4. Estimation of excess air for better combustion of briquettes.
5. To study about extraction of oil from rice bran.
6. To study about waste treatment plant in food industry.
7. To study about utilization of whey.
8. To study about recovery of peel oil.
9. To study about recovery of germ and germ oil from by-product of cereals.
10. Practical on bioconversion of agro-wastes.
11. Practical on recycling of agro-wastes and by-products.
12. Visits to various industries using waste and food by-products.

Text Books/References

4. N.S. Rathore, A.K. Kurchania. N.L. Panwar. (2007). Non Conventional Energy Sources, Himanshu Publications.

RS 415 ENERGY MANAGEMENT

At the end of the course, the student will incline towards conservation of energy through application of efficient devices and practices, energy auditing for exposing inefficient method/routes in production and processing plants as also to promote best practices for recourse/energy management in various sectors.

Cr. Hrs. 3 (3 +0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Energy Basics; Energy Demand Management, Conservation & Resource Development, Energy for Sustainable Development.

Unit-II

Need for Energy Management by Sector- Industry, Buildings & Houses, Transport, Electric Power.

Unit-III

Need for Energy Management by Sector- Agriculture, Domestic; Energy forecasting techniques; Energy Integration, Energy Matrix.

Unit-IV

Energy Auditing; Energy management for cleaner production, application of renewable energy, appropriate technologies.

BS 411 OPERATION RESEARCH

Cr. Hrs. 3 (3 + 0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Introduction and importance of OR; Meaning and classification of models; Linear programming; Mathematical formulation, Graphical Solutions.

Unit-II

Simplex methods; Degeneracy and duality.

Unit-III

Transportation type problems, Assignment problems.

Unit-IV

Concepts of waiting line and simple problems, Project management by PERT/CPM methods.

Text Books/References

1. S.D. Sharma. (1980). Operations Research, Pragati Prakashan, Meerut.
2. Goyal and Mittal. (1982). Operations Research, Pragati Prakashan, Meerut.

ME 411 (AE) PRODUCTION TECHNOLOGY OF AGRICULTURAL MACHINERY

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Metal Working: Drop forging, drop hammers, dies for drop forging, upset and press forging, forging presses, forging rolls, forging defects. Hot and cold extrusion. Seamless tubes manufacturing processes, swaging. Wire, bar and tube drawing.

Unit-II

Sheet Metal Working: Classification of processes. Process capabilities, process planning and elements of tooling of shearing (blanking, piercing, trimming, shaving, notching), drawing and forming processes. Sheet metal presses. Punch and die sets. Compound, progressive, and combination dies. Drop hammer forming, Guerin process, bulging, stretch forming, spinning and explosive forming. High velocity forming of metals.

Moulding and extrusion of plastic, forming and drawing of plastic sheets.

Unit-III

Powder Metallurgy: Introduction, production of powder, manufacturing of parts by powder metallurgy and their applications.

Production of screw threads, milling, and uses of dies. Production of gears, milling, shaping, and hobbing, finishing of gears.

Heat Treatment Processes: hardening, tempering, annealing, precipitation, and surface hardening.

Unit-IV

Abrasive Machining: Types and classification. Surface, cylindrical, and centreless grinding. Tool and cutter grinders. Grinding wheels, abrasives, bonding processes, selection of grinding wheels. Honing, lapping, and superfinishing methods, polishing and buffing.

Unconventional Machining Methods: Abrasive jet, electric discharge, electrochemical, ultrasonic, electron beam, plasma arc and laser beam machining. Electrolytic grinding, chemical milling.

Practicals

1. Demonstration/exercises related to forging and sheet metal working.
2. Exercises/study on screw threads and gear measurement, surface roughness measurement, comparators, etc.

Text Books/References

1. J.S. Campbell. Principles of Manufacturing Materials and Processes, Tata McGraw-Hill Company Ltd, New Delhi.

ME 416 (a) FINITE ELEMENT METHOD

Cr. Hrs. 3 (3 + 0)

	L	T	P
Credit	3	0	0
Hours	3	0	0

Unit-I

Review of matrix algebra, theory of elasticity, stress-strain relations, strain-temperature relations, plane stress, plane strain.

Introduction to FEM with direct or stiffness formulation for bar problem. Element stiffness matrix, assembly, imposition of boundary conditions, solution of global system, stress and support reaction computation.

Computation details, storage schemes for global matrices. Solution of equations in static analysis. Gauss elimination.

Unit-II

Principle of stationary (or minimum) potential energy. Shape functions, degree of continuity, interpolation Shape functions for C^0 and C^1 elements. General displacement based formulation for structural problems. Consistent element nodal loads. Equilibrium and compatibility in FE model.

Finite element formulation for one dimensional bar and heat transfer problems. Linear and quadratic elements. Natural coordinates, isoparametric formulation.

Unit-III

Finite element formulation of one dimensional beam problem from minimum potential energy approach. Beam element. Coordinate transformations, truss elements. Application to simple beam and truss problems.

Unit-IV

Finite element formulation for two dimensional structural problems – minimum potential energy approach. Natural (area) coordinates. Constant strain triangular (CST) elements for structural problems.

AG 411 STATISTICAL METHODS

Cr. Hrs. 3 (2 + 1)

	L	T	P
Credit	2	0	1
Hours	2	0	2

Unit-I

Random variable, mathematical expectation, moment generating function, probability distribution; binomial, poisson's and normal distribution.

Unit-II

Correlation and regression analysis, rank correlation, partial correlation, multiple correlations, fitting of multiple regressions equations.

Unit-III

Test of significance, null hypothesis and alternative hypothesis, type I and II errors, level of significance, critical region, degree of freedom, Z-test and Students t-test for one sample and two sample problems, paired t-test, test of significance of simple, partial and multiple correlations, chi-square test for testing and independence of attributes, Yates's correction.

Unit-IV

Analysis of variance, assumptions, general considerations in conducting experiments, uniformity trials, Fairfield Smith variance law, basic principles of experimental design, Completely Randomized Design, Randomized Block Design and Latin Square design with statistical analysis.

Gen 410 ENTREPRENEURSHIP DEVELOPMENT

Cr. Hrs. 2 (0 + 2)

	L	T	P
Credit	0	0	2
Hours	0	0	4

Entrepreneurship Development: Assessing overall business environment in the Indian economy. Overview of Indian social, political and economic systems and their implications for decision making by individual entrepreneurs. Globalisation and the emerging business/entrepreneurial environment. Concept of entrepreneurship; entrepreneurial and managerial characteristics; managing an enterprise; motivation and entrepreneurship development; importance of planning, monitoring, evaluation and follow up; managing competition; entrepreneurship development programs; SWOT analysis, Generation, incubation and commercialization of ideas and innovations. Government schemes and incentives for promotion of entrepreneurship. Government policy on Small and Medium Enterprises (SMEs) / SSIs. Export and Import Policies relevant to horticulture sector. Venture capital. Contract farming and joint ventures, public-private partnerships. Overview of horti inputs industry. Characteristics of Indian horticultural processing and export industry. Social Responsibility of Business.
