Taxing Wages - Estonia

Tax on labour income

The tax wedge is a measure of the tax on labour income, which includes the tax paid by both the employee and the employer.

TAX WEDGE ON LABOUR INCOME

 $\frac{((Personal\ income\ tax +\ employee\ and\ employer\ social\ security\ contributions\ (SSCs)) - Family\ Benefits)}{(Total\ labour\ costs\ (gross\ wages\ +\ employer\ SSCs))}$

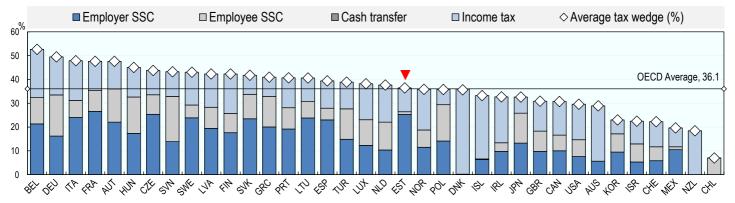

Single worker

The tax wedge for the average single worker in Estonia decreased by 2.5 percentage points from 39.0 in 2017 to 36.5 in 2018. The OECD average tax wedge in 2018 was 36.1 (2017, 36.2). In 2018 Estonia had the 20th highest tax wedge among the 36

OECD member countries, compared with the 17th in 2017. The 2018 tax wedge is the lowest an average single worker in Estonia has faced over the 2000 - 2018 period.

In Estonia, income tax and employer social security contributions combine to account for 97% of the total tax wedge, compared with 77% of the total OECD average tax wedge.

Average tax wedge: average single worker, no children

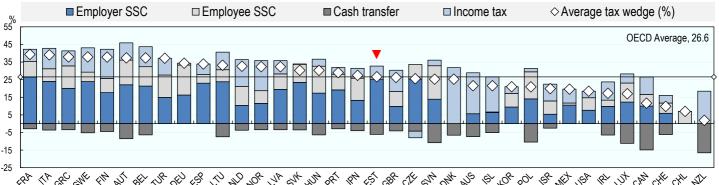

One-earner married couple with two children

The tax wedge for a worker with children may be lower than for a worker on the same income without children, since most OECD countries provide benefits to families with children through cash transfers and preferential tax provisions.

- Estonia had the 19th highest tax wedge in the OECD for an average married worker with two children at 26.6% in 2018, which compares with the OECD average of 26.6%. The country occupied the 17th highest position in 2017.
- Child related benefits and tax provisions tend to reduce the tax wedge for workers with children compared with the average single worker. In Estonia in 2018, this reduction (9.8 percentage points) was very close to the OECD average (9.5 percentage points).

Average tax wedge: One-earner married couple at average earnings, 2 children

Tax wedge trends between 2000 and 2018

- In Estonia, the tax wedge for the average single worker decreased by 4.8 percentage points from 41.3% to 36.5% between 2000 and 2018. During the same period, the average tax wedge across the OECD decreased by 1.3 percentage points from 37.4% to 36.1%.
- Since 2009, the tax wedge for the average single worker decreased by 2.7 percentage points in Estonia. During this same period, the tax wedge for the average single worker across the OECD increased by 0.6 percentage points.

Employee tax on labour income

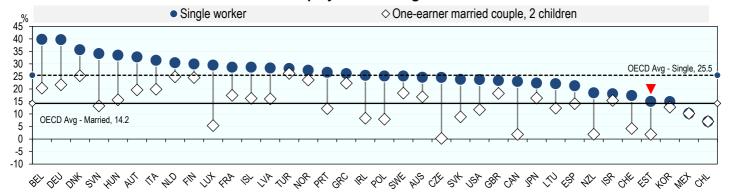

The employee net average tax rate is a measure of the net tax on labour income paid directly by the employee.

EMPLOYEE NET AVERAGE TAX RATE

 $\frac{\textit{(Employee personal income tax and employee social security contributions)} - \textit{Family Benefits}}{\textit{Gross wages}}$

- In Estonia, the average single worker faced a net average tax rate of 15.0% in 2018, compared with the OECD average of 25.5%. In worker words, in Estonia the take-home pay of an average single worker, after tax and benefits, was 85.0% of their gross wage, compared with the OECD average of 74.5%.
- Taking into account child related benefits and tax provisions, the employee net average tax rate for an average married worker with two children in Estonia was reduced to 1.8% in 2018, which is the 35th lowest in the OECD, and compares with 14.2% for the OECD average. This means that an average married worker with two children in Estonia had a take-home pay, after tax and family benefits, of 98.2% of their gross wage compared to 85.8% for the OECD average.
