IBM **Cloud**

# IT Automation Powered by AI

Achieve new levels of efficiency and resiliency in your IT operations

Challenges:

SREs and IT teams spend most of their time on day-to-day management and incident resolution, while CIO's sacrifice innovation for stability.
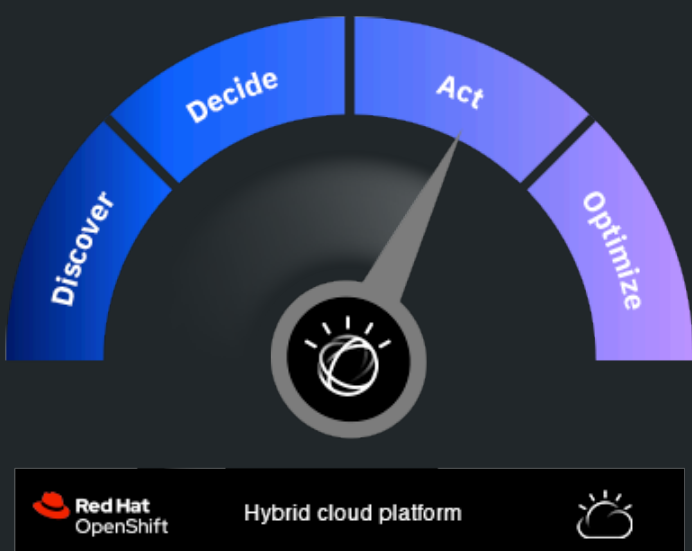

Teams need to:

Improve employee productivity and operational efficiency by automating repetitive tasks.

Minimize the risk of security breaches and non-compliance issues.

Integrate data and application services to better support business initiatives.

Manage apps across different clouds and VMs while maintaining visibility and control.

50%
less in labor costs

by providing IT operators with insights powered by AI

Our unique application-centric approach to ITOps helps you automate labor-intensive IT processes and proactively mitigate high impact triggers. By using this approach, ITOps and developers work together to improve responsiveness and mitigate risk through a unified governance model in the open, hybrid cloud environment offered by IBM and Red Hat.
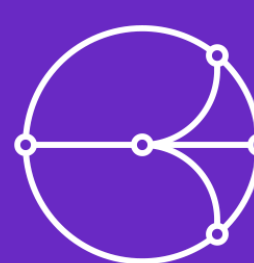

Discover · Decide · Act · Optimize

Red Hat OpenShift — Hybrid cloud platform

IBM Cloud Pak® for Watson AIOps, part of the IBM Automation platform, helps you achieve intelligent IT automation by:

**Bringing** business context to disparate components through an application-centric approach

Delivering actionable insights to improve responsiveness

Leveraging intelligent workflows to provide governance and manage risk

IBM is your trusted and experienced partner.

IBM understands complex, mission-critical IT environments and how best to apply AI to IT operations to maximize efficiency, reduce cost and maintain the resiliency and security you need to drive meaningful innovation.
