

# Web 2.0 and diffusion of research

(beta)

Ismael Peña López  
Faculty of Law and Political Science

César Córcoles Briongos  
Faculty of Computer Science, Multimedia and Telecommunication

Barcelona, 06/04/2006

## Conclusions (1/3)

I proceed from the assumption that as knowledge workers our **primary job** is to communicate. Communication is not overhead, it's the work.

Chris Dent

<http://www.burningchrome.com/~cdent/mt/archives/000435.html>

## Conclusions (2/3)

1. Markets are **conversations**.

95. We are waking up and linking to each other.  
We are watching. But we are **not waiting**.

Levine, Locke, Searls & Weinberger (1999)  
*The Cluetrain Manifesto*

## Conclusions (3/3)

Establishing **open access** as a worthwhile procedure ideally requires the **active commitment** of each and every individual producer of scientific knowledge and holder of cultural heritage. Open access **contributions** include **original** scientific research results, **raw** data and metadata, **source** materials, digital representations of pictorial and graphical materials and scholarly multimedia material.

*Berlin Declaration on Open Access to Knowledge in the  
Sciences and Humanities*

## Visibility of working in the web 2.0

- **Identity in the network**
- **Appearing in your research area**
- **Self-tagging**

Web 2.0 Meme Map

What is Web 2.0? (2/2)

Tim O'Reilly (2005)

## From Web 1.0 to Web 2.0

**The web 1.0 is the dot-com bubble. The web from 1995 to 1999.  
The web 2.0 is the “web of the people”. The web from 2003 on.**

- The personal page → The blog
- Directories (taxonomies) → Tagging (“folksonomies”/“tagsonomies”)
- The Hotmail experience → The GMail experience

### **Say...**

- Content creation, management and publishing made easy
- From a “centralist” organization to the “wisdom of crowds”
- From the static page to the dynamic web application

## Core aspects of Web 2.0

- Standards: (X)HTML, CSS, Semantics, Microformats
- Tags and “folksonomies”
  - del.icio.us and Flickr
- The boom of “*social software*” and architectures of participation
  - Digg and Slashdot
- The Long Tail
  - Amazon
- Rich user experiences
  - GMail, Google Local, ajaxWrite, ajaxSketch
- Web services, open APIs and mash-ups
- Content syndication

 [Print](#)  [Email](#)  [Link to this page](#)

#### Example searches:

Go to a location

- [kansas city](#)
- [10 market st, san francisco](#)

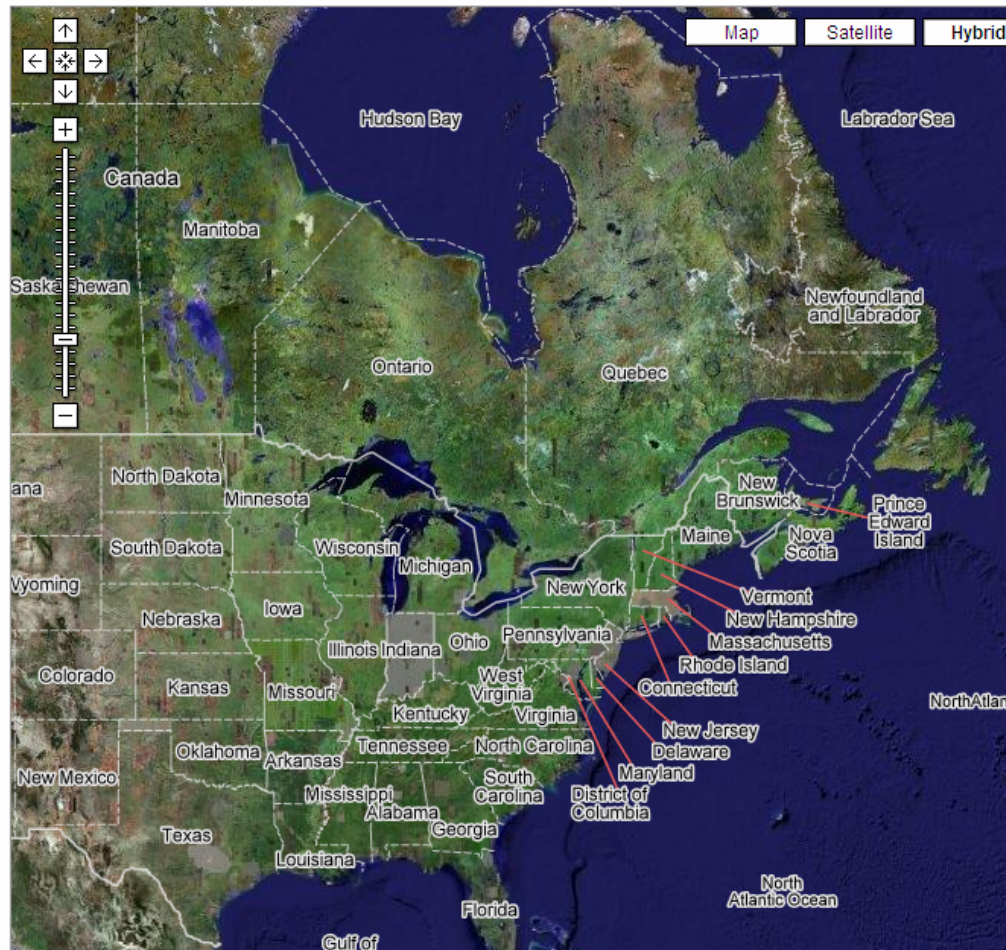

Find a business

- [hotels near lax](#)
- [pizza](#)

Get directions

- [jfk to 350 5th ave, new york](#)
- [seattle to 98109](#)

Drag the map with your mouse, or double-click to center. [Take a tour »](#)

## “Philosophy” of Web 2.0

### What it is

- An attitude, not one technology
- User as contributor and editor
- Data hegemony
- Freedom to create and share
- Emergent behavior
- Web as the platform
- Market as conversation
- Eternal beta (Google Labs / Yahoo! Next)

## Concepts around Web 2.0

### Ideas

- FLOSS / GNU GPL
- LAMP
- RSS
- Open Access / Creative Commons
- FLOSSE
- OER
  
- CMS
- VLE
- personal learning environment
- e-portfolio

## (emblematic) Tools

- Wiki: [Wikipedia](#)
- Blog: [WordPress](#)
- Feed readers: [Bloglines](#)
- Agregator: [Digg](#)
- Social bookmarking: [del.icio.us](#), [furl](#), [connotea](#), [citeulike](#)
- Storage: [flickr](#), [youtube](#)
- Google maps: [frappr](#) ([edubloggers](#)), [hurricane inf. maps](#)
- Agenda and social networks: [43 things](#), [orkut](#), [friendster](#)
- Comunication: [Skype](#)
- e-Commerce: [Amazon](#)
- ...

## Using Web 2.0 in the diffusion of the research (1/2)

- Constant updating
- Specialization
- Training
- Improving writing, analysis, abstraction, synthesis.
- Read → think → write

 Constant public exposure

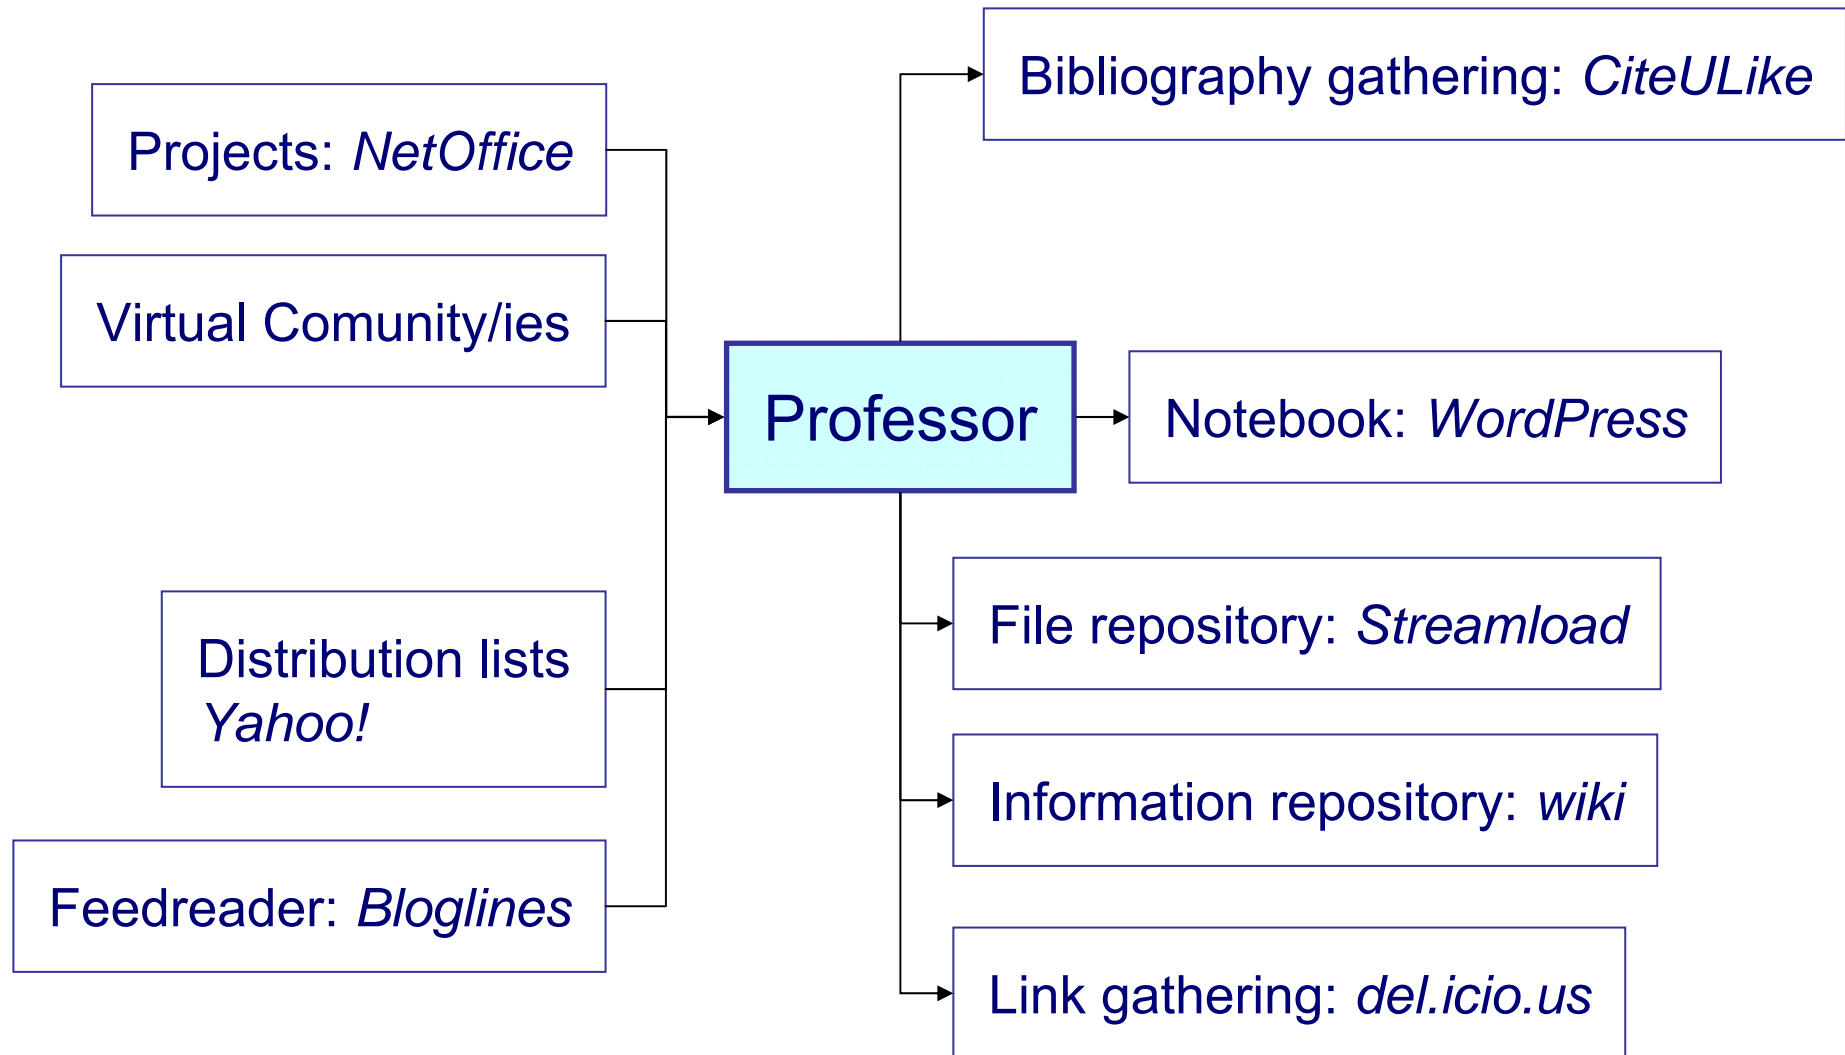

- Digital resources gathering
- Current news
- Information
- Materials
- Forefront research

## Using Web 2.0 in the diffusion of the research (2/2)

- personal/public information **repository**, with **past and present** (work in progress) interlinked documentation
- belonging to a (wide) **informal community** of people interested in same knowledge field, where to go looking for help, collaborators, to share experiences or just to have an outlet for yourself
- enter the **virtuous cycle of reading and being read**
- first-hand information, **from the source** and in real time.
- let others know that you know and what you know
- avoid waits and filters... and “google friendly”
- and with the desired **license**

**Web 2.0 <> having a blog, but taking part in the web 2.0 dynamics**

## (possible) Web 2.0 map: teaching, research, diffusion

**Networked Readiness Index Vs. Human Development Index** edit this

by ismael peña — average reading time 1'52 minutes

filed under: [ict4d](#) | [e-readiness](#) | [development](#)

The World Economic Forum has released the Global Information Technology Report 2005-2006, being one of the more interesting outputs the **Networked Readiness Index (NRI)**. A pity – like most cases – you have to pay to get the full report.

In open access you can find:

- ◆ Some information on the [Global Information Technology Report](#), mainly a table of contents, preface and executive summary.
- ◆ [XLS](#) Networked Readiness Index rankings (23 Kb) you can edit and tickle with.

I'd usually finish here my post, but tickling is tickling.

I put in a table both the Networked Readiness Index (NRI) and the Human Development Index (HDI). In another table, same NRI against the Education Index extracted from the HDI. And plotted a couple of graphics shown below.

## Global Information Technology Report

<http://www.weforum.org/gitr>

Since it was first launched in 2001, the Global Information Technology Report has become a valuable and unique benchmarking tool to determine national ICT strengths and weaknesses, and to evaluate progress. It also highlights the continuing importance of ICT application and development for economic growth.

The Report uses the Networked Readiness Index (NRI), covering a total of 115 economies in 2005-2006, to measure the degree of preparation of a nation or community to participate in and benefit from ICT developments.

The NRI is composed of three component indexes which assess:

- the environment for ICT offered by a given country or community
- the readiness of the community's key stakeholders - individuals, business and governments
- and the usage of ICT among these stakeholders .
