Co-Creator, Vitess V CTO *f*planetscale

## Why are things Changing?

Vitess

# **Problem Areas**

#### Orchestration

### Distribution

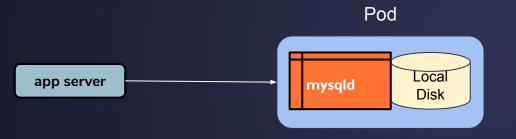

#### Transformation

# Orchestration

## Scenario 1: Local Disk

• Data loss on Pod reschedule

## **Scenario 2: Mounted Volume**

Unavailability on Pod reschedule Performance impact

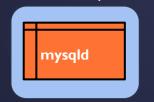

## Scenario 3: Failover

#### Pod 0: Master

#### Pod 1: Replica

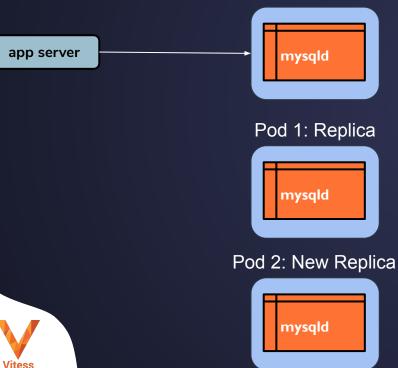

- Cannot designate master
- Failover on Pod reschedule
- Who informs the app?

## Scenario 4: Discovery

#### Pod 0: Master

- How do you initialize the replica?
- Who informs the app?

### **Vitess Features**

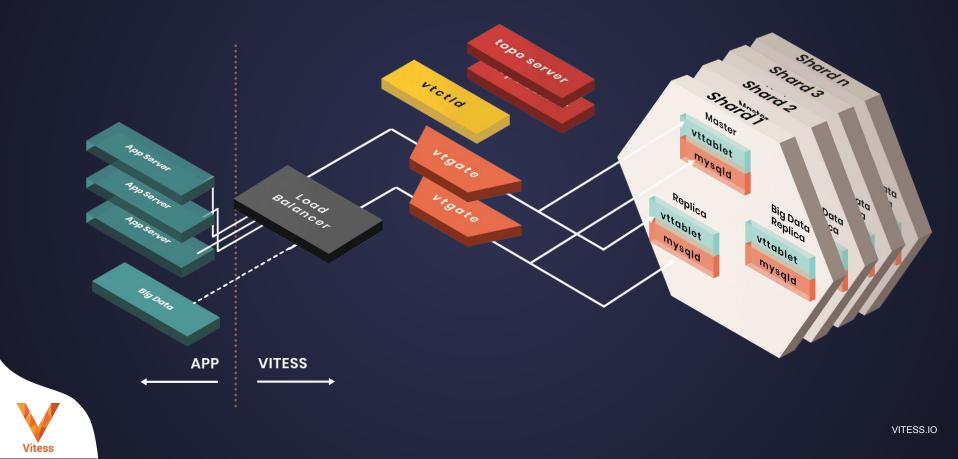

### Discovery Failovers Backups Schema

# Distribution

### **Vitess Architecture**

# Transformation VReplication

### **Use Cases**

Materialized Views

Migrate Data

Upgrade MySQL Versions

Reshard

Stream Everything out

Change Sharding Key

Anonymize PII

# **Slack Migration**

### 1000+ Shards

100+ тв

**100+** KQPS

Estimate

VReplication

4 Engineers 3-5 Years 1 Engineer 1 Year

Zero Downtime Transparent to App

# Yelp Pll Filtering

### 800+ Tables

120 With PII

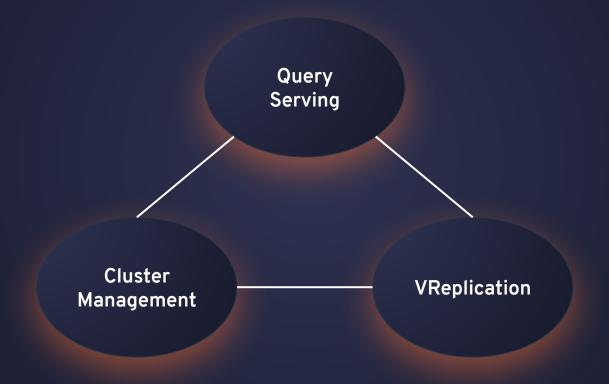

### 700+ Rules

### "Refactor Data like you Refactor Code"

### **Vitess Pillars**

### Vitess serves millions of QPS in production
