

Kaspersky® Endpoint Security for Business

Protect what your business values most

IT security budgets don't always reflect growing business demands and escalating threat levels. Resources must be optimized to meet the challenges of today – and tomorrow. But how do you identify the right security solution – one that will protect every element of your IT infrastructure against the most advanced cyberthreats, and ensure business continuity in a changing world, without blowing your budget?

Try asking our customers. Kaspersky Endpoint Security for Business delivers adaptive, comprehensive security that scales with your business, safeguarding its continuity and assets with a full stack of the most advanced technologies. And the results speak for themselves.

World-leading threat intelligence is built into our DNA and influences everything we do. As an independent company we are more agile, think differently and act faster to confront and neutralize cyberthreats, regardless of their origin or purpose. That's how our products and solutions are able to deliver levels of True Cybersecurity that no other vendor can offer.

True Cybersecurity that leaves the rest behind

The technologies layered into Kaspersky Endpoint Security for Business provide a perfect balance between performance and efficient protection. This balance may explain why our products deliver one of the highest detection rates in the industry, as continuously demonstrated through independent tests. Kaspersky is ranked among the 3 highest vendors in each Use Case in [Gartner's 2018 Critical Capabilities for Endpoint Protection Platforms](#).

Protects endpoints, servers and gateways
The world's most tested and most awarded security technologies help boost detection with minimal false positives – protecting containers, servers and gateways as well every endpoint.

Streamlines security management and delegation
The unified web console features Active Directory integration, as well as Role-Based Access Control (RBAC) and customizable dashboards, so access can be streamlined in line with team member responsibilities.

Cuts complexity and total cost of ownership
Less effort needed to stay current, even during migration between versions of Windows or upgrade to future versions of our endpoint protection product.

Hardens systems and boosts productivity
Host Intrusion Prevention and cloud-enabled anomaly, web, device and application controls all reduce your attack surface and help keep corporate resources under control, even outside your IT perimeter.

Secures vulnerabilities 24x7 to reduce attack entry-points
With support for 150+ software applications, our vulnerability monitoring and patch management provides comprehensive cover for all the most widely-used business applications.

Saves time by automating OS and software deployment tasks
Setting up new workstations in branch or home offices can be done remotely and automatically. You can also roll out and schedule new applications for automatic installation after-hours.

Spots more attacks and intrusions – even without regular updates
Our lightweight cloud mode delivers optimum protection with minimal impact on PC resources and internet bandwidth usage. Signature-less components enable the detection of threats even without frequent updates and are enhanced by Next Gen static (pre-execution) and dynamic (post-execution) Machine Learning (ML).

Common Criteria

Our knowledge is your power

Adaptive protection built by world-leading experts, with minimal impact on resources and management overheads. Protection and machine learning-based technologies identify and block endpoint threats, regardless of origin or target. And, if you're attacked, malicious actions are rolled back so your users can keep on working.

A little mistake shouldn't become a big deal

Secures diverse environments and scales easily, without extensive planning required, even in heterogeneous IT infrastructures, providing the freedom to change any pre-defined settings and to choose when to adopt new capabilities.

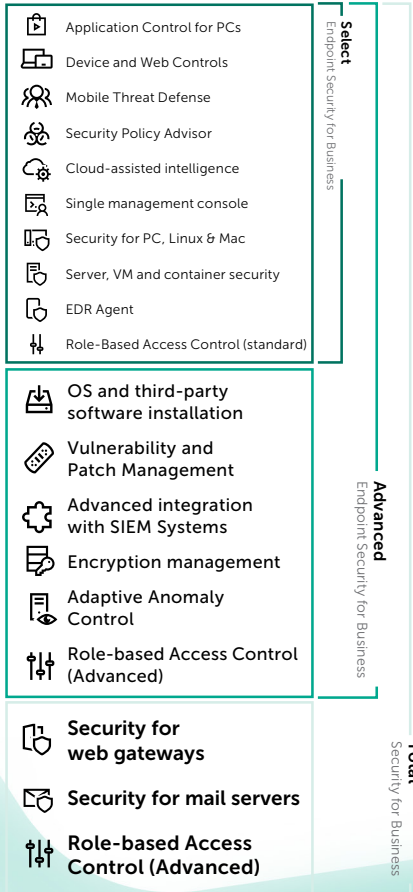

The calm at the center of digital transformation

We've automated processes you shouldn't have to think about, like EDR agent deployment, patch management, post-attack rollback and software distribution. Our consistently high performance in independent tests and analyst reviews means you don't just have to take our word for it – this really is cybersecurity you can trust.

Three progressive feature packs
Kaspersky Endpoint Security for Business tools and technologies are intelligently balanced across progressive tiers to meet your evolving security and IT needs at every point in your business journey.

See our separate data sheets covering each tier – Select, Advanced and Total – for more details.

Support and Services
Operating in more than 200 countries from 35 offices worldwide, our 24/7 commitment to global support is reflected in our Maintenance Service Agreement (MSA) support packages. Our Professional Services teams are on standby to ensure that you extract the maximum benefit from your solution, providing assistance with deployment as well as support during critical incidents.

Beyond endpoint protection – now and in future

Based on unparalleled sources of real-time threat intelligence and machine learning, our technologies continually evolve, enabling you to secure what your business values most against the latest, most complex cyberthreats.

Recognized by decision-makers like you

Forget the marketing hype – listen to the recommendations of those who have already upgraded to Kaspersky Endpoint Security for Business, and are enjoying the benefits:

- Consistently outstanding protection – easy one-step upgrades ensure you're always up-to-date and ready to counter the latest cyberthreats
- User-friendly and centralized management – one server, one web console, one single agent
- Deeper integration of components – built in-house with decades of top ratings and independent verification
- Everything you need in a single purchase – transparent cost and licensing.

“Complete Security Protection With Fast Implementation.”
