

# MARIADB ENTERPRISE ARCHITECTS

Highly Customized Architect Services Solving Business Needs

## A DEDICATED RESOURCE

It seems like new technologies hit the market every day, causing IT to get exponentially more complex. For enterprises trying to balance their legacy technologies with the introduction of new applications and services, managing databases can often get in the way of innovation – the real goal of any company.

MariaDB Enterprise Architects can help by providing you with a detailed and highly customized technical roadmap to convert the challenging demands placed on IT by business into tangible reality, acting as a dedicated contact for your database needs and applying a deep knowledge of your customer environment to the database and open source technologies available.

## VALUE

MariaDB Customers who engage an Enterprise Architect are able to:

- Make **better decisions** about MariaDB deployments, ensuring new technologies are aligned with enterprise methodologies
- Create **cohesive data management strategies** and plans for future application development and cloud adoption initiatives
- **Proactively plan** for growth in data and transaction volumes
- **Migrate effectively** from legacy (commercial) database systems to MariaDB – achieving cost savings and consolidated, highly performant architecture based on modern, cutting-edge Open Source technology
- **Derive greater value** from MariaDB Support, RDBA and Consulting contracts

- **Improve** the performance, availability and scalability of applications that use MariaDB
- Enterprise Architects are Cloud, **Cloud Native**, Kubernetes, Docker Containerization and Database as a Service (DBaaS) aware

## MIGRATING IN A SUCCESSFUL, STREAMLINED SETTING

In order to reduce costs and consolidate an existing legacy database architecture, a migration to MariaDB is a very attractive option. In order to ensure success, you will face technical, organizational and process-related challenges. Significant expertise in both MariaDB and legacy DBMS architecture ensures a smooth migration.

We offer full assistance for customers who want to migrate to MariaDB. Our Enterprise Architect for Migration allows for a controlled, well-founded and highly streamlined migration procedure, in which our migration experience and best practices are applied consistently and purposefully.

- **Analysis** of efforts and risks within our Migration Assessment
- Choose optimal migration paths
- Project planning including **interfaces between dependent systems**
- **Proof of Concept** (POC) projects for quickly proving migration viability
- Develop generic solutions that align with your database team's programming style
- Coordination, technical expertise and quality assurance for the migration team
- **Switchover planning**, training, validation and conduct

## ENLIST THE POWER OF A MARIADB ENTERPRISE ARCHITECT

Enterprise Architects use industry-recognized architecture frameworks and project management best practices to take a holistic look at your business and technical vision to solve real world challenges. Based on our deep database expertise we are able to understand your environment intimately to provide specific, customized advice about the whole application.

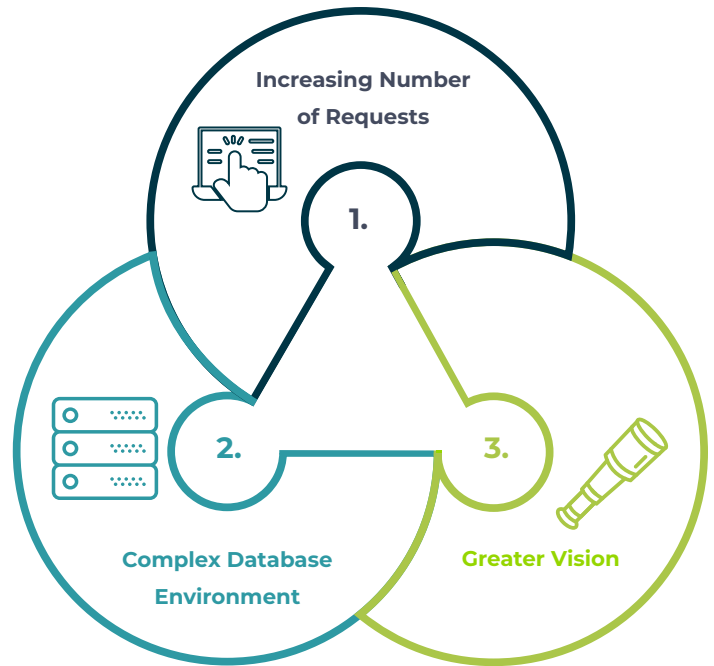

We provide overarching architectural review and guidance to ensure successful deployments and the efficient use of MariaDB. The Enterprise Architect engages in regular calls and onsite meetings which typically include status review, roadmap review, best practice advice and configuration recommendations. With an Enterprise Architect on your side, your path to optimal database usage is strengthened and safeguarded. Ordering a MariaDB Enterprise Architect is like recruiting the best of the best to oversee your project, at a fraction of operational cost and management effort.
