Do you stream Ogg Vorbis?

You Should! Here is why:

No Patent Restrictions!

Unlike MP3, Ogg Vorbis is not restricted by patents. Microsoft had to pay \$1.5 billion after being sued for using MP3. With Ogg Vorbis, they would have been safe.

Choose Free Software!

RealPlayer and Windows Media Player formats require people to use non-free software: controlled by companies, not by the users. The companies that control the software design it to restrict the users and spy on them. By transmitting in their formats, you play into their hands. However, if you choose Ogg Vorbis, people can listen using many different media players, including free software. Please respect your listeners by letting them choose free software.

Nothing to Lose!

You won't sacrifice any technical quality by encoding your audio in Ogg Vorbis. It can compress down to a smaller size than MP3 while still sounding good (thus saving you time and bandwidth costs). Best of all, it is designed to be completely free of patents and does not require the use of proprietary software.

How to Use Ogg Vorbis

To make it easy for your listeners to install Ogg Vorbis players on their computers, put a link to <http://playogg.org> on the page that links to your audio. The Ogg Vorbis home page, <http://www.vorbis.com>, has all the information you need to both listen to and produce Vorbis-encoded files.
