Similarities

Free Software

Targetting end users

Consumer devices

Differences

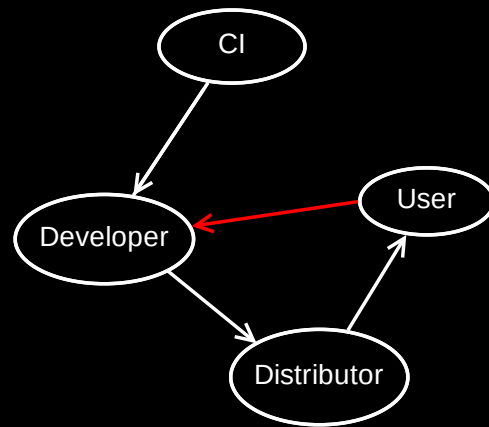

Lots of different products

Scope of the solutions

Focus on apps

How is Free Software released?

~~We~~ have users

Lots of testing and QA

On each form factor

On each OS (and distro?)

On each architecture

**On each display manager
(Wayland!)**

On each version

How can we do it?

We have Qt

We have the KDE Frameworks

We have a great ecosystem

We have openQA

What does it look like?
