ARDI – Research for Innovation

The Access to Research for Development and Innovation (ARDI) program, coordinated by WIPO together with its [partners](#) in the publishing industry, aims to increase the availability of scientific and technical information in developing countries. By improving access to scholarly literature from diverse fields of science and technology, ARDI seeks to:

- reinforce the capacity of developing countries to participate in the global knowledge economy; and
- support researchers in developing countries in creating and developing new solutions to technical challenges faced on a local and global level.

[Contact us](#)

ARDI is administered by the World Intellectual Property Organization
The ARDI portal is hosted by the World Health Organization

Not secure | login.research4life.org/tacgw/login.cshtml

Type in user name and password exactly as provided by your institution. Passwords are case-sensitive. Click *Login*.

Note: To have access to the full test articles and ebooks, you must properly login.

Secure Login

USER NAME

PASSWORD

ENGLISH

LOGIN

 AGORA - Agriculture, Forestry, Fisheries, Climate & Food Security →	 ARDI - Innovation & Technology →	 GOALI - Law →
 Hinari - Health →	 OARE - Environment →	

Click on the **ARDI** logo to open the program.

All the programs your institution is registered for are listed. Login to any of the other programs by returning to this page (use the **R4L Portal – Applications** tab at the top of the web browser). To open another program, click on the specific *logo*. Your ARDli username and password will grant access to the other programs (and ditto for your institution's AGORA, ARDI GOALI or OARE logins).

Further login Instructions

We strongly recommend to **not** bookmark this connection page. It is always preferable to open the HINARI portal (www.who.int/hinari/) itself or another R4L program. The initial page of the program will have the right link to the login page – especially if there are any future changes to the authentication server.

Auto-login option

- Users at a registered institution can, using an auto-login-enabled computer, access a Research4Life search interface, review results and abstracts, and download the full text of articles, without needing to log on each time
- Auto-login can resolve many login and password problems
- Your institution must have an intranet (internal network not publicly accessible)
- To request the auto-login script and technical instructions, contact r4l@research4life.org

Genetic Retrospect of Seedcotton Yield and its Components from a 6-Parent *Gossypium hirsutum* Diallel Cross Under Water Stress Conditions

Pages 110-123

Munaiza Baloch, Bashir Ahmad Ansari, Moula Bux Kumbhar and Muhammad Ibrahim Keerio

DOI: <http://dx.doi.org/10.6000/1927-5129.2014.10.16>

Published: 17 April 2014

OPEN ACCESS

Abstract: A six-by-six complete F_1 *Gossypium hirsutum* diallel cross involving three drought tolerant and three drought susceptible varieties (CRIS-134, CRIS-342, Sadori, Niab-78, BH-160) was evaluated for genetic parameters under normal and stress conditions at Tandojam. The characters studied were number of bolls per plant and lintcotton yield per plant. The effect of irrigation stress on the genetic inheritance pattern of above quantitative traits as to how far the genetic parameters are affected due to irrigation stress in the F_1 diallel generation. Irrigation treatments were four; normal seven irrigations schedule, five irrigations, four irrigations (medium stress) and three irrigations up to 150 days of crop maturity (stress conditions). CRIS-134 in seven, Sadori in five and CRIS-342 in four and three irrigations treatments were the most recessive parents contributing increasing boll number into their progenies while BH-160 in seven, CRIS-342 in five and Sindh-1 in four and three irrigations treatments proved to be the most dominant parents responsible for contributing decreased boll number per plant into their progenies. Seedcotton per plant was partial dominant in seven irrigations treatment while it inherited as an overdominant trait in five, four and three irrigations respectively. BH-160 was the most recessive of all with increased sympodia contributing attributes in seven and four irrigations whereas Niab-78 in five and CRIS-342 in stress were the most recessive parents. Sindh-1 was the most dominant parent in seven, five and three irrigation treatments while CRIS-342 in four irrigations yielded decreased sympodia contributing attributes into their progenies. Sindh-1 in seven, BH-160 in five and three and CRIS-342 in four irrigations treatments proved to be the most recessive parents with increasing seedcotton yield attributes while CRIS-342 in seven and five and Sindh-1 in four and three irrigations were the most dominant parents contributing decreased seedcotton yield into their progenies. Inheritance trend of lintcotton per plant was similar to that of seedcotton yield per plant.

The full-text version of the 1st article is displayed. Note the **Download Full Article** option.

Keywords: Genetic retrospect, *Gossypium hirsutum*, diallel cross, irrigation stress.

Additional Information

Abstract: A six-by-six complete F₁ *Gossypium hirsutum*, L. diallel cross of three pre-screened drought tolerant and three drought susceptible varieties (CRIS-134, CRIS-342, SINDH-1, NIAB-78, SADORI and BH-180) was evaluated for genetic parameters during 2009 at Sindh Agriculture University farm, Tandojam. The characters studied were number of bolls per plant, sympodial branches per plant, seedcotton yield per plant and lintcotton yield per plant. The objective of such study was to assess the effect of irrigation stress on the genetic inheritance pattern of above quantitative traits as to how far the genetic parameters are affected due to irrigation stress in the F₁ diallel generation. Irrigation treatments were four; normal seven irrigations schedule, five irrigations, four irrigations (medium stress) and three irrigations up to 150 days of crop maturity (stress conditions). CRIS-134 in seven, Sadori in five and CRIS-342 in four and three irrigations treatments

TESTIMONIALS

¹Department of Plant Breeding and Genetics; ²Department of Plant Physiology, Sindh Agriculture University, Tandojam, Pakistan

Abstract: A six-by-six complete F₁ *Gossypium hirsutum*, L. diallel cross of three pre-screened drought tolerant and three drought susceptible varieties (CRIS-134, CRIS-342, SINDH-1, NIAB-78, SADORI and BH-160) was evaluated for genetic parameters during 2009 at Sindh Agriculture University farm, Tandojam. The characters studied were number of bolls per plant, sympodial branches per plant, seedcotton yield per plant and lintcotton yield per plant. The objective of such study was to assess the effect of irrigation stress on the genetic inheritance pattern of above quantitative traits as to how far the genetic parameters are affected due to irrigation stress in the F₁ diallel generation. Irrigation treatments were four; normal seven irrigations schedule, five irrigations, four irrigations (medium stress) and three irrigations up to 150 days of crop maturity (stress conditions). CRIS-134 in seven, Sadori in five and CRIS-342 in four and three irrigations treatments were the most recessive parents contributing increasing boll number into their progenies while BH-160 in seven, CRIS-342 in five and Sindh-1 in four and three irrigations treatments proved to be the most dominant parents responsible for contributing decreased boll number per plant into their progenies. Seedcotton per plant was partial dominant in seven irrigations treatment while it inherited as an overdominant trait in five, four and three irrigations respectively. BH-160 was the most recessive of all with increased sympodia contributing attributes in seven and four irrigations whereas Niab-78 in five and CRIS-342 in stress were the most recessive parents. Sindh-1 was the most dominant parent in seven, five and three irrigation treatments while CRIS-342 in four irrigations yielded decreased sympodia contributing attributes into their progenies. Sindh-1 in seven, BH-160 in five and three and CRIS-342 in four irrigations treatments proved to be the most recessive parents with increasing seedcotton yield attributes while CRIS-342 in seven and five and Sindh-1 in four and three irrigations were the most dominant parents contributing decreased seedcotton yield into their progenies. Inheritance trend of lintcotton per plant was similar to that of seedcotton yield per plant.

Keywords: Genetic retrospect, *Gossypium hirsutum*, diallel cross, irrigation stress.

INTRODUCTION

Economically, quite a number of species experience variable soil-water contents depending on irrigation,

[4]. Dehydration avoidance is also synonymously used for drought tolerance enabling higher 'hydration' level under soil or atmospheric water stress. The basic concept of dehydration avoidance is in fact retaining a

Accurate Clock Pendulums

Robert J. Matthys

ABSTRACT

The Shortt clock, made in the 1920s, is the most famous accurate clock pendulum ever known, having an accuracy of one second per year when kept at nearly constant temperature. Almost all of a pendulum clock's accuracy resides in its pendulum. If the pendulum is accurate, the clock will be accurate. This book describes many scientific aspects of pendulum design and operation in simple terms with experimental data, and little mathematics. It has been written, looking at all the different parts and aspects of the pendulum in great detail, chapter by chapter, reflecting the degree of attention nec ... [More](#)

Keywords: pendulum clocks, accuracy, clamps, mechanical joints, quartz, temperature compensation, air drag, sinusoidal electromagnetic drive, pendulum, design

Displayed is a spreadsheet of all the Books available from ARDI. Remember that the publishers may not grant access to some of the titles.

From the *Complete List of ARDI journals*, a similar list can be downloaded.

Internet E-book Resources (overview)

- **Booksee** – en.booksee.org

This is a portal that claims to have over 2,400,000 downloadable e-books (PDFs). It has a keyword search engine plus a broad subject category listing. Search listings are limited to 100 titles so precise keyword searches should be used. Each title entry notes the language of the e-book and MB size. Due to the size of the full-text books, downloading can be time consuming especially if there is limited bandwidth.

- **Intechopen** – www.intechopen.com/books

The 'World's leading publisher of Open Access books; over 3500 titles in the portal; IntechOpen's Academic Editors and Authors are members of a growing scientific community focused on quality, peer-reviewed research and expeditious spreading of knowledge.

- **FreeBookCentre.net** – www.freebookcentre.net

This portal focuses primarily on academic material. It has a keyword search tool and also a list of broad subject categories and sub-categories. Each entry notes the title, language format and many contain a one sentence summary plus the link to the PDF.

- **National Academy Press** – nap.edu

The Academy grants free and downloadable access to all the PDFs of their e-book publications.

Individuals must register for this feature (free). The initial screen has a key-word search engine plus links to broad categories including Agriculture, Biology and Life Sciences, Energy and Energy Conservation, Food and Nutrition and Health and Medicine. Each category has a sub-topic list.

Telecommunications in Vertical Challenges and Opportunities

Introduction

A recent public debate has addressed the challenges of telecommunications in the context of the global economy. The debate has focused on the need for telecommunications to support the growth of the global economy and the challenges of telecommunications in the context of the global economy.

The challenges of telecommunications in the context of the global economy are many. These challenges include the need for telecommunications to support the growth of the global economy and the challenges of telecommunications in the context of the global economy.

The challenges of telecommunications in the context of the global economy are many. These challenges include the need for telecommunications to support the growth of the global economy and the challenges of telecommunications in the context of the global economy.

Possible Problems

Access problems can be caused by:

- 1) failure to properly **LOGIN** with the institution's **User Name/Password**
- 2) technical problems at the Publisher's website
- 3) Problems with local systems (configuration of user institution's firewall, configuration of browser) or
- 4) the publisher has not authorized access

Institutional Firewall Problems

If problems persist, please contact your computer department as the problem may be on your side, probably with your firewall. Check that your firewall does not block proxies, or at least allows our proxy server, otherwise you will not be able to login. Please check that your firewall permits access to the ARDI host and domain names:

- www.wipo.int/
- ardi.wipo.int
- ardilogin.research4life.org
- stsr4l.who.int

Otherwise, you will not be able to login properly and access ARDI's full-text articles.

The *login.research4life.org...* url or *Login in From: Test account* message shows that you are logged into ARDI. Open the B list from the Journals collection.

Screen Captures

Listed below is one of several options to complete screen captures:

- display the screen you want
- click on the ‘print screen’ key - usually top/right of keyboard
- open the ‘Paint’ program and paste the image (control/v); to open ‘Paint’ – go to Programs, (Windows) Accessories, Paint
- To edit the image, use the ‘crop’ icon to limit content)

- copy again (control/c) and paste in document

Note: You can delete the ‘paint’ program step and paste the screen capture directly into your document.

Or use the Snipping Tool – go to Programs,
(Windows) Accessories, Snipping Tool
