BRING ON THE FUTURE

Why should you integrate Kaspersky security into your RMM tool?

92% of MSPs
already use RMM software

63% of MSPs
already use RMM software

Streamlined resource efficiency

MSPs around the world are looking to streamline their resource efficiency to help their customers – and themselves – grow their business.

Kaspersky Security Integration for ConnectWise® Automate™ integrates Kaspersky security apps into your ConnectWise® Automate™ Control Center to deliver a powerful combination of monitoring and management tools and protection technologies.

By monitoring and managing all Kaspersky security applications installed at your clients' locations with a single tool – no need for multiple software products – you significantly boost your protection monitoring and management capabilities.

Easy integration

Kaspersky Security Integration with ConnectWise® Automate™ is delivered as an easy-to-install plug-in, installed on the computer with ConnectWise® Automate™ Control Center installed.

A special script allows simple, discreet remote installation of Kaspersky Security Center Network Agents and Kaspersky Endpoint Security directly from ConnectWise® Automate™.

Effortless protection monitoring

Proactive monitoring means finding IT problems before they affect your business. Depending on the type of issue, the monitors automatically raise alerts, create tickets and automatically run virus scans and update commands for the anti-virus database, even when incidents occur outside of working hours.

Simplified protection management

Managing routine tasks is a pleasure with the centralized dashboard – integrating Kaspersky Security Center or Kaspersky Endpoint Security Cloud console into your ConnectWise® Automate™ console lets you automate virus scanning and database updates and run on-demand scans with just one click.

Automated ticketing, efficient prioritization

Your IT staff are under enough pressure. Direct integration of the Kaspersky management console into ConnectWise® Automate's ticketing lets you prioritize critical issues, ensuring escalation to the right person at the right time, every time.

### A clear view of your clients' security

Monitor all your client devices and platforms – including virtual infrastructures – from one place. Kaspersky's powerful single dashboard, integrated into ConnectWise Automate provides a single view of all your client accounts and security, giving you complete control.

Drill-down into detailed views of events for swift resolution of problems, reducing your time-per-client without compromising on customer service or security.

Compatibility

Kaspersky solutions can be integrated with on-premises and cloud versions of ConnectWise Automate. Kaspersky Security Integration for ConnectWise® Automate™ supports ConnectWise's Multivendor Antivirus Dashboard, enabling easy monitoring and management of the status of Kaspersky products installed on client workstations and Windows servers.

Make it happen! Just add Kaspersky Security Integration for ConnectWise® Automate™ to your ConnectWise Automate Control Center

Products ready to integrate

- Kaspersky Endpoint Security for Business
- Kaspersky Endpoint Security Cloud
- Kaspersky Security for Microsoft Office 365
