

World Traditional Medicine Patent Information Platform

World Traditional Medicine Patent Information Platform is the first bilingual (Chinese/English) patent database independently developed in China which provides deeply processed patent information regarding traditional medicine and extraction. Covering information patterns from 20 countries and 2 intentional organizations, Traditional Chinese Medicine is at the core of the data base. It is currently the most advanced deeply processed database on natural medicine, including information on combination process, formulation process, new therapeutic use, extraction process, analytic process, plant cultivation, veterinary medicine, therapeutic cosmetics and detergent.

Discovery of Anti-Influenza A Traditional Chinese Medicine Compound Using World Traditional Medicine Patent Information Platform

In June 2009, a new anti-influenza A traditional Chinese medicine (TCM) compound is discovered jointly by both Chinese and international researchers. They focus on analyzing the binding patterns between protein N1 and small molecular anti-influenza A virus drugs, and their approach is based on data retrieval and data mining using the World Traditional Medicine Patent Information Platform, the Traditional Chinese Medicine Chemical Structure Database, and Saphron TCM Database.

Animal tests by the P3 laboratory of the Academy of Military Medical Sciences of China have proved that the compound is effective in protecting and treating mice pneumonia infected with influenza A.

As it takes only three months for the research to achieve noticeable progress, this database-based approach can be deemed as a shortcut for drug design in an efficient and cost-effective manner, which is especially useful for developing countries like China.

Acquired by State Intellectual Property Office (SIPO) through Procurement

Examiners at the TCM division of SIPO speak highly of the World Traditional Medicine Patent Information Platform, as it can sharpen them up, and they make it the most preferred choice during patent examination.
