Covering the global threat landscape

VB100 CERTIFICATION REPORT JUNE 2019

Martijn Grooten

For more than two decades, *Virus Bulletin* has been testing anti-malware products, reporting on their performance as both the threat landscape and the products themselves have evolved, and has provided the VB100 certification scheme as a mark of distinction for those products that live up to expectation. The VB100 logo is the ‘stamp of approval’ conferred on products that satisfy a minimum standard of detecting malicious executables that have recently been seen in the wild, while blocking few to no legitimate programs.

This report details the VB100 certification of 34 anti-malware products from 31 different vendors tested during May and June 2019.

THE VB100 SET-UP

In the VB100 test, a copy of the product to be tested is installed on two platforms: *Windows 10* and *Windows 7*. On each platform, and at three different times in the test, the product is asked to scan both the latest version of the WildList¹ and a selection of clean files taken from *Virus Bulletin*’s own set of files belonging to widely used legitimate software.

A legitimate file that is blocked at least once is considered a false positive, while a WildList file that isn’t blocked is considered a miss.

A product achieves a VB100 certification if:

- No more than 0.5% of WildList samples are missed and
- No more than 0.01% of legitimate files are blocked

¹The WildList is an extremely well-vetted set of malware recently observed in the wild by researchers: <http://www.wildlist.org/>.

For full details, we refer to the VB100 methodology on the *Virus Bulletin* website: <https://www.virusbulletin.com/testing/vb100/vb100-methodology/vb100-methodology-ver1-1/>. This test used version 1.1 of the VB100 methodology.

DIVERSITY TEST

The malware part of the VB100 certification uses the WildList, a regularly updated list of extremely well-vetted malware samples, guaranteed to have been spotted in the wild multiple times. This makes them very suitable for a certification test like VB100.

The ‘Diversity Test’ looks at products’ detection of another set of recent malware samples, to acknowledge the fact that products detect malware samples beyond a standard set of samples, and provides a measure of that detection.

PRODUCTS & RESULTS

Products were allowed to download updates during the course of the test. The version numbers listed in the results that follow refer to those at the start of the test.

Adaware Antivirus Free

Windows 7 version	12.6.1005.11662
Windows 10 version	12.6.1005.11662
WildList detection	100.0%
False positive rate	0.000%
Diversity Test rate	99.80%

Adaware Antivirus Pro

Windows 7 version	12.6.1005.11662
Windows 10 version	12.6.1005.11662
WildList detection	100.0%
False positive rate	0.000%
Diversity Test rate	99.80%

AVG Internet Security

Windows 7 version	19.4.3089
Windows 10 version	19.4.3089
WildList detection	100.0%
False positive rate	0.000%
Diversity Test rate	100.00%

AhnLab V3 Internet Security 9.0

Windows 7 version	9.0.53.1
Windows 10 version	9.0.53.1
WildList detection	100.0%
False positive rate	0.000%

VirIT eXplorer PRO

Windows 7 version	8.9.41
Windows 10 version	8.9.23
WildList detection	100.0%
False positive rate	0.001%
Diversity Test rate	71.41%

Wontok SafeCentral Security Suite

Windows 7 version	2.0.1548
Windows 10 version	2.0.1548
WildList detection	100.0%
False positive rate	0.000%
Diversity Test rate	100.00%

APPENDIX 1: PRODUCTS NOT CERTIFIED

Cyren failed to achieve VB100 certification in this test because its number of false positives was just above the threshold for VB100 certification.

APPENDIX 2: EXCLUDED PARTS

- For *adaware AntiVirus Free* and *adaware AntiVirus Pro*, the results of the Diversity Test on *Windows 7* were discarded due to technical issues.
- For *Heimdal Thor Vigilance*, the results of the Diversity Test were discarded due to technical issues.

APPENDIX 3: SAMPLE SET SIZES

The WildList contained 2,236 samples. The set of clean files used for the false positive test contained 99,999 files, of which 29,123 were portable executable (PE) files. The set used for the Diversity Test contained 990 samples.
