

# Primary School Opts for Cloud-Based Security

Saint-Benoist de l'Europe primary school opts for Cloud-based security with Kaspersky Lab.

## Education

- Headquartered in Bagnolet
- Uses Kaspersky Endpoint Security Cloud

## Saint-Benoist de l'Europe protects its 27 computers with Kaspersky Endpoint Security Cloud.

Saint-Benoist de l'Europe School, based in Bagnolet, France, has 350 pupils. Students are divided across 13 different classes, which range from preschool to CM2 (approximately equivalent to US grade 4), as well as a class for pupils with special educational needs. The educational establishment currently has 27 networked computers that can be accessed by teaching staff, pupils and the school management. Thanks to the Kaspersky Endpoint Security Cloud solution, this IT architecture is now protected.

## Challenge

Up until 2015, Saint-Benoist de l'Europe School did not have any serious infrastructure or IT security management in place. Moreover, none of its staff members had been offered training in IT best practices, such as not connecting USB sticks from unreliable or unverified sources. This situation meant that there were frequent network failures, and a spyware program was even detected on the Principal's desktop. Faced with this situation, and on the advice of the president of the OGEC [the Catholic Education Management Organization] which oversees the operation of the school, the institution approached IT service provider, Weodeo. The situation was fully analyzed, and the service provider recommended a Kaspersky Lab solution.

**“The option selected by Weodeo in terms of securing our IT infrastructure gives me peace of mind. The Kaspersky Lab solution enables me to focus on my job because the solution is fluid, straightforward and remotely managed through the cloud.”**

Marie-Anne Delbourg  
Primary School Principal  
Ecole Saint-Benoist de l'Europe

### Performance

Simple to install

Minimal involvement required from local staff

### Security

Optimum level of security

### Management

Centralized control

Transparency of the solution

## The Kaspersky Lab solution

"We went with Kaspersky Lab because, in our opinion, they offer the best solutions. More specifically, we chose Kaspersky Endpoint Security Cloud to respond to the particular needs of this primary school," says Philippe Aymonod, Managing Director of Weodeo.

With Kaspersky Endpoint Security Cloud, Weodeo can manage the school's desktop, mobile device and file server security remotely, from any location. The simple, intuitive cloud-based console combines cybersecurity tools with powerful management features. "Installation was particularly straightforward," says Philippe Aymonod. It took less than 3 hours to install an optimal level of security on the school's 27 desktops.

## Benefits

### Reliable Security for Peace of Mind

For Marie-Anne Delbourg, the primary school's Principal, "the option proposed by Weodeo for securing our infrastructure gives me peace of mind."

Indeed, while the Principal is responsible for the proper functioning of the school's IT equipment, she is now able to focus on her job, thanks to the remote cloud-based management offered by Kaspersky Endpoint Security Cloud. There have been no attacks since it was implemented in 2016.

In addition, Weodeo offers the option of adapting users' security levels if they are a regular target of attacks.

Finally, Weodeo holds regular training on IT security awareness for teachers who may not necessarily know what constitutes risky behavior (such as clicking on a suspicious link), or of the potential dramatic consequences for the organization itself. "Human behavior is behind seventy percent of the problems encountered," concludes Philippe Aymonod.
