Electronic Technical Manual (eTM) Measure Specification

Percent Primary Care Patients engaged in PC-MHI (pact15)

tablename	Attribute	Information
Definition	Measure Name	Percent Primary Care Patients engaged in PC-MHI
	Measure Mnemonic	pact15
	Measure Coordinator	Beth Sahlmann
	Measure Long Description	Numerator: Number of patients engaged in PC-MHI; Denominator: Number of patients enrolled in Primary Care
	Date of Activation	Sep 24 2013
	Date of Deactivation	
	Data Source Definition	Administrative data (Encounter data) obtained by VSSC from CDW.
	Data Source Report	PACT Compass Version 2.0
	Measure Notes	Facilities that have implemented web PCMM will not have data reported for this measure until the data has been validated. Validation can take up to 6months or less. Each VISN should track the implementation schedule for their facilities. The cohort will include patients assigned to a PACT Team. This measure was preceded by pact14, which used a cohort of all primary care patients. September data is not reported.
Details	Measure - Indicator Type	Quality Indicator without Goal
	Target Definition	
	Scoring and Report Display	Rolling 12 Month
	Preferred Score Direction	Higher is Better
	Data Available in SHRED for Division Level Scoring	Yes
Reporting	Measure Reported on / Target	Strategic Analytics for Improvement and Learning with Target of `No Target`
	Composite Reporting	Part of Composite: MH Population Coverage (pcov1)
		Part of Composite: MH Population Coverage (pcov2)

Electronic Technical Manual (eTM) Measure Specification

Percent Primary Care Patients engaged in PC-MHI (pact15)

Tech Manual	Cohort/Eligible Population	Patients assigned to PACT Teams
	Cohort/Eligible Population Inclusions	Only divisions identified as VA Medical Center campuses (excluding Manila), very large (10,000 or more core uniques) CBOCs and large (5,000 or more core uniques) CBOCs per the Office of Mental Health are included in this measure. Core uniques include all patients except those whose interaction with the facility is limited only to laboratory and telephone triage episodes of care.
	Cohort/Eligible Population Exclusion	
	Denominator	The total number of assigned primary care patients (Team Assignments) at required divisions
	Denominator Inclusion	
	Denominator Exclusion	Excludes those patients assigned to Serious Mental Illness Primary Care Teams.
	Numerator	The total number of assigned primary care patients seen in primary care mental health integration (PMHI) during the past 12 months for required divisions.
	Numerator Inclusions	Includes a visit in a PCMHI clinic (primary stop code 534 or 539) or a HBPC MH provider (primary stop code 156 and 157) or PCMHI telephone encounters (stop code pairs 527/534 and 338/534) in the reporting month plus the previous eleven months (rolling twelve months) while patient is on the panel. The qualifying PCMHI encounter can occur anywhere in the administrative parent (health care system). The Veteran is always counted at their home site (where they are enrolled in primary care).
	Numerator Exclusion	Excludes those patients assigned to Serious Mental Illness Primary Care Teams.
