VB100 CERTIFICATION REPORT DECEMBER 2019

Martijn Grooten

The VB100 certification scheme provides a stamp of quality and competence for anti-malware products that satisfy a minimum standard of detecting malicious executables that have recently been seen in the wild, while blocking few to no legitimate programs.

This report details the VB100 certification results of 39 such products from 33 different vendors during November and December 2019.

THE VB100 SET-UP

In the VB100 test, a copy of the product to be tested is installed on two platforms: *Windows 10* and *Windows 7*. On each platform, and at three different times in the test, the product is asked to scan both the latest version of the WildList¹ and a selection of clean files taken from *Virus Bulletin's* own set of files belonging to widely used legitimate software.

A legitimate file that is blocked at least once is considered a false positive, while a WildList file that isn't blocked is considered a miss.

A product achieves a VB100 certification if:

- No more than 0.5% of WildList samples are missed and
- No more than 0.01% of legitimate files are blocked

For full details, we refer to the VB100 methodology on the *Virus Bulletin* website: <https://www.virusbulletin.com/testing/vb100/vb100-methodology/vb100-methodology-ver1-1/>. This test used version 1.1 of the VB100 methodology.

DIVERSITY TEST

The malware part of the VB100 certification uses the WildList, a regularly updated list of extremely well-vetted

¹The WildList is an extremely well-vetted set of malware recently observed in the wild by researchers: <http://www.wildlist.org/>.

malware samples, guaranteed to have been spotted in the wild multiple times. This makes them very suitable for a certification test like VB100.

The 'Diversity Test' looks at products' detection of another set of recent malware samples, to acknowledge the fact that products detect malware samples beyond a standard set of samples, and provides a measure of that detection.

PRODUCTS & RESULTS

Products were allowed to download updates during the course of the test. The version numbers listed in the results that follows refer to those at the start of the test.

Ad-Spider

Windows 7 version	2019.11.01
Windows 10 version	2019.11.01

VirIT eXplorer PRO

Windows 7 version	9.0.36
Windows 10 version	9.0.52
WildList detection	100.0%
False positive rate	0.000%
Diversity Test rate	68.01%

APPENDIX 1: PRODUCTS NOT CERTIFIED

Cyren Command Anti-Malware did not achieve VB100 certification in this test.

APPENDIX 2: TESTING NOTES

- Test results for *Exosphere Endpoint Protection* are based on *Windows 10* data only, as data inconsistencies rendered the *Windows 7* test results unreliable.
- *ITL Total Security* was tested in on-demand test mode. At the request of the vendor, we also note that real-time protection behaviour was also observed, if not tested.
- The Diversity Test results for *Kaspersky Endpoint Security 11 for Windows* were considered unreliable due to an engineering error on VB's behalf, and were discarded.
- The Diversity Test results for *SentinelOne Endpoint Security Platform* were invalidated due to technical issues on both test platforms.

APPENDIX 3: SAMPLE SET SIZES

The WildList (certification) set contained 2,471 malicious samples. The set of clean samples used for the false positive test contained 100,000 files, of which 29,175 were portable executable (PE) files. The set used for the Diversity Test contained 991 malicious samples.
