Small Group Scenario Trainer (SGST)

The SGST tool on JKO is a flexible and dynamic, user-editable, collaborative staff training application that can facilitate tailored exercise events with participants geographically displaced. It is designed to fill the gap between individual and collective training by providing constructive, practical experience in an immersive environment, using short duration, vignette-type scenarios. It is particularly suited for training boards, bureaus, centers, cells, and work groups.

SGST is essentially a delivery application that can host a scripted scenario with a built-in exercise clock, real-time communications, and file-sharing capability. A variety of different injects can be delivered on a pre-programmed schedule, or manually sent to one or more participants to force action or manage exercise flow. Exercise control is provided by an individual or team from a separate Manager Module.

Because it is completely web-based, SGST provides for distributed exercise execution where users can participate from their own workstations and does not require a separate exercise facility or physical space. Exercises can be created or modified using the Builder Module.

JKO provides the SGST on both JKO NIPRNET and SIPRNET Portals, accessed by selecting the SGST tab at the top of the page when you login.   A library of SGST exercise scenarios currently exists and are readily tailorable for other combatant commands.
