

# DELL EMC POWERSTORE STORAGE FAMILY

The ground-breaking Dell EMC PowerStore achieves new levels of operational simplicity and agility, utilizing a container-based architecture, advanced storage technologies, and intelligent automation to unlock the power of your data. Based on a scale-out architecture and hardware-accelerated advanced data reduction, PowerStore is designed to deliver enhanced resource utilization and performance that keeps pace with application and system growth. Utilizing the proven capabilities of VMware ESXi, PowerStore X models with AppsON provide the unique ability to host data-intensive and storage applications directly on the PowerStore system with a storage-based virtualization environment, with the flexibility of seamless movement of applications between the storage system and external VMware servers. PowerStore T models provide organizations with all the benefits of an enterprise unified storage platform for block, file and vVol data, while enabling flexible growth with the intelligent scale-up AND scale-out capability of appliance clusters.

## Architecture

Based on a versatile scale-up and out platform utilizing Intel® Xeon® Scalable processors and today's most advanced storage technologies, including end-to-end NVMe Flash, dual-ported Intel® Optane™ SSDs, NVMe-FC and always-on data reduction, PowerStore uses powerful analytics, automation and active resource balancing to optimize performance and eliminate management overhead. Each appliance utilizes dual active-active storage nodes and a container-based software architecture to provide maximum adaptability.

## Physical Specifications

| PER APPLIANCE                                 | 500   | 1000  | 3000 | 5000 | 7000 | 9000 |

|                              | * Available for PowerStore T models only   |         |         |         |         |         |

## Cluster System Limits

| PER CLUSTER          |       |                                      |       |
|----------------------|-------|--------------------------------------|-------|
| Max. Appliances      | 4     | Max Initiators                       | 2,000 |
| Max. Front End Ports | 96    | Max Initiators in an Initiator Group | 1,024 |
| Max. iSCSI sessions  | 2,048 |                                      |       |

Maximum number of drives & maximum raw capacity of a PowerStore cluster will depend on the appliance level limits mentioned above.

## Connectivity

Connectivity options via Mezzanine cards and IO modules for file, for NFS/SMB connectivity, and block storage for FC and iSCSI host connectivity (see above table for number of modules supported per node).

| Connectivity Options   |   |   |
|--|---|---|
| Type   | Description   | Details   |
| Mezzanine card / IO Module **  | Two-Port 10 Gb/s Optical Module (Block)             | Two port 10GbE IP/iSCSI module. Uses SFP+ optical connection or active/passive twinax copper connection to Ethernet switch  |
| Mezzanine card / IO Module ***   | Four-Port 10Gbase-T Module (File & Block)           | Four port 10Gbase-T Ethernet IP/iSCSI module with copper connection to Ethernet switch  |
| Mezzanine card / IO Module   | Four-Port 25 Gb/s Optical Module (File & Block)     | Four port IP/iSCSI module with choice of 25GbE or 10GbE. Uses SFP+ optical connection or active/passive twinax copper connection to Ethernet switch               |
| IO Module  | Four-Port 32 Gb/s Fibre Channel Module (Block only) | Four port FC module with choice of 16Gb/s or 32Gb/s connectivity. Uses multimode optical SFP and OM2/OM3/OM4 cabling to connect directly to host HBA or FC switch |
| IO Module  | Four-Port 10Gbase-T Module (Block Only) *           | Four port 10Gbase-T Ethernet IP/iSCSI module with copper connection to Ethernet switch  |
| IO Module  | Four-Port 25 Gb/s Optical Module (Block Only) *     | Four port IP/iSCSI module with choice of 25GbE or 10GbE. Uses SFP+ optical connection or active/passive twinax copper connection to Ethernet switch               |
| ** Only available for PowerStore 500<br>*** Not available for PowerStore 500<br>**** Ports 2 and 3 on the 4-Port Mezzanine card on 500T are reserved for future use<br>* IO module type only available for PowerStore T models |   |   |

## Back-end (Drive) Connectivity\*

Each node connects to one side of each of two redundant pairs of four-lane x 12 Gb/s Serial Attached SCSI (SAS) ports, providing continuous drive access to hosts in the event of a node or port fault.

| Disk Expansion Enclosure  |           |

## OE Protocols and Software Facilities

Support is provided for a wide variety of protocols and advanced features available via various software suites, plug-ins, drivers and packs.

| Protocols and Facilities Supported                                    |   |  |
|---|---|--|
| Access-based Enumeration (ABE) for SMB protocol                       | Lock Manager (NLM) v1, v2, v3, and v4   | REST API: Open API that uses HTTP requests to provide management |
| Address Resolution Protocol (ARP)                                     | Management & Data Ports IPv4 or IPv6  | RSVD v1 for Microsoft Hyper-V (SMB3)                             |
| Block Protocols: iSCSI, Fibre Channel (FCP SCSI-3), NVMe/FC, NVMe/TCP | NAS Servers Multi-protocol for UNIX and SMB clients (Microsoft, Apple, Samba) | Simple Home Directory access for SMB protocol                    |
| DFS Distributed File System (Microsoft) as Standalone Root Server     | Network Data Management Protocol (NDMP) v1-v4, 3-way                          | Simple Mail Transfer Protocol (SMTP)                             |
| Direct Host Attach for Fibre Channel                                  | Network Information Service (NIS) Client                                      | Simple Network Management Protocol v2c & v3 (SNMP) Trap support  |
| Dynamic Access Control (DAC) with claims support                      | Network Status Monitor (NSM)  | Virtual LAN (IEEE 802.1q)  |
| Internet Control Message Protocol (ICMP)                              | Network Time Protocol (NTP) Client  | VMware Virtual Volumes (vVols) 2.0                               |
| Kerberos Authentication   | NFS v3/v4 Secure Support  | vStorage APIs for Array Integration (VAAI)                       |
| LDAP (Lightweight Directory Access Protocol)                          | NT LAN Manager (NTLM)   | vStorage APIs for Storage Awareness (VASA)                       |

| Security & Compliance  |
|--|
| Common Criteria (in process)   |
| Data at Rest Encryption (D@RE) in PowerStore utilizes FIPS 140-2 Level 2 validated Self-Encrypting Drives (SEDs) by respective drive vendors for primary storage (NVMe SSD, NVMe SCM and SAS SSD).<br>The NVRAM caching device is encrypted but not FIPS 140-2 validated at this time. |
| IPv6 certification   |
| Native SHA2 certificate  |
| Restriction of Hazardous Substances (RoHS) compliance  |
| TLS 1.2 support by default, TLS 1.1 and older are disabled by default. TLS 1.1 can be optionally enabled.  |

## Virtualization and Container Solutions

PowerStore offers support for a wide variety of protocol and advanced features available via various software suites and packs including but not limited to:

- Dell EMC Virtual Storage Integrator (VSI) for VMware vSphere™: For provisioning, management, and cloning
- OpenStack Cinder Driver: For provisioning and managing block volumes within an OpenStack environment
- VMware Site Recovery Manager (SRM) Integration: Managing failover and failback making disaster recovery rapid and reliable
- Virtualization API Integration: VMware: VAAI and VASA.
- vRO Plugin for PowerStore
- Container Storage Interface (CSI) Plugin for PowerStore
- Ansible Module for PowerStore

## Electrical Specifications

All power figures shown represent a worst-case product configuration with max normal values operating in an ambient temperature environment of 40°C.

The enclosure power numbers provided may increase when operating in a higher ambient temperature environment.

| PowerStore Base System Enclosures   |   |  |  |  |  |  |

## Operating Environment

|  | Description  | Specification  |
|--|--|--|
| Recommended Range Operation              | The limits under which equipment will operate the most reliably while still achieving reasonably energy-efficient data center operation.   | 18°C to 27°C (64.4°F to 80.6°F) and 15°C (59°F) dew point  |
| Continuous Allowable Range Operation     | Data center economization techniques (e.g. free cooling) may be employed to improve overall data center efficiency. These techniques may cause equipment inlet conditions to fall outside the recommended range but still within the continuously allowable range. Equipment may be operated without any hourly limitations in this range. | 5°C to 35°C (50°F to 95°F) at 20% to 80% relative humidity with 21°C (69.8°F) maximum dew point (maximum wet bulb temperature). De-rate maximum allowable dry bulb temperature at 1°C per 300m above 950m (1°F per 547 ft above 3117 ft).  |
| Improbable Operation (Excursion Limited) | During certain times of the day or year, equipment inlet conditions may fall outside the continuously allowable range but still within the expanded improbable range. Equipment operation is limited to ≤ 10% of annual operating hours in this range.   | 35°C to 40°C (with no direct sunlight on the equipment) at -12°C minimum dew point and 8% to 85% relative humidity with 24°C maximum dew point (wet bulb temperature). Outside the continuously allowable range (10°C to 35°C), the system can operate down to 5°C or up to 40°C for a maximum of 10% of its annual operating hours. For temperatures between 35°C and 40°C (95°F to 104°F), de-rate maximum allowable dry bulb temperature by 1°C per 175m above 950m (1°F per 319 ft above 3117 ft). |
| Temperature Gradient                     |  | 20°C / hour (36°F / hour)  |
| Altitude                                 | Max Operating  | 3050m (10,000ft)   |

## Statement of Compliance

Dell EMC Information Technology Equipment is compliant with all currently applicable regulatory requirements for Electromagnetic Compatibility, Product Safety, and Environmental Regulations where placed on market.

Detailed regulatory information and verification of compliance is available at the Dell Regulatory Compliance website.

[http://dell.com/regulatory\\_compliance](http://dell.com/regulatory_compliance).
