

Enterprise SONiC Distribution 4.0

Reduce risk and operational overhead with greater agility and enhanced fabric security with a highly scalable, agile and reliable open source-based network operating system.

Run a modernized network architecture end-to-end, **from the datacenter to the edge**

Unified network operating system, common toolsets

Manage multiple sites as a single network, migrate workloads to prevent downtime

Automate edge deployment and configuration tasks centrally

Support for port security and private/voice VLANs provides better security across entry points into the fabric

Streamline operations for lower TCO while avoiding disruption and downtime from unplanned outages or performance issues

We're taking open source **mainstream**
