Small Office  
Security**

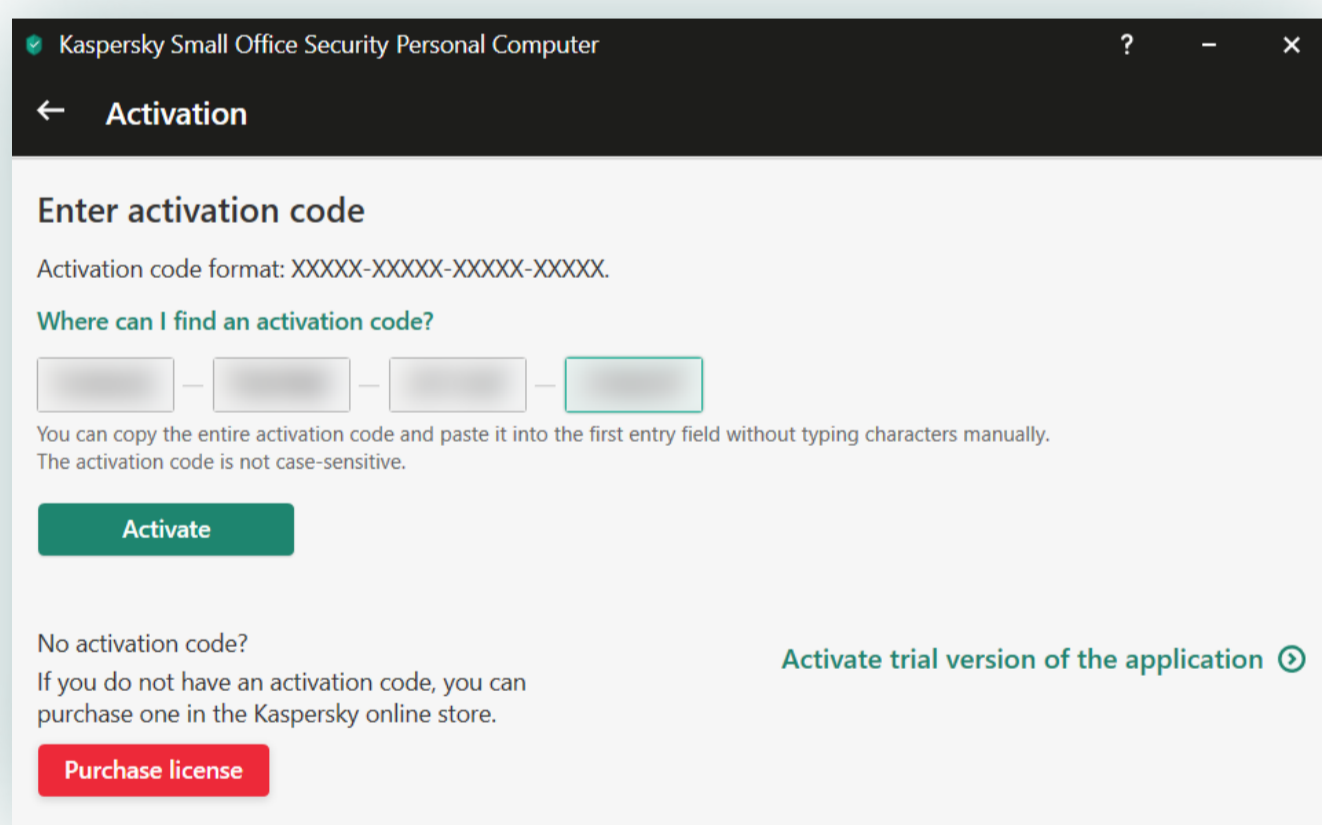

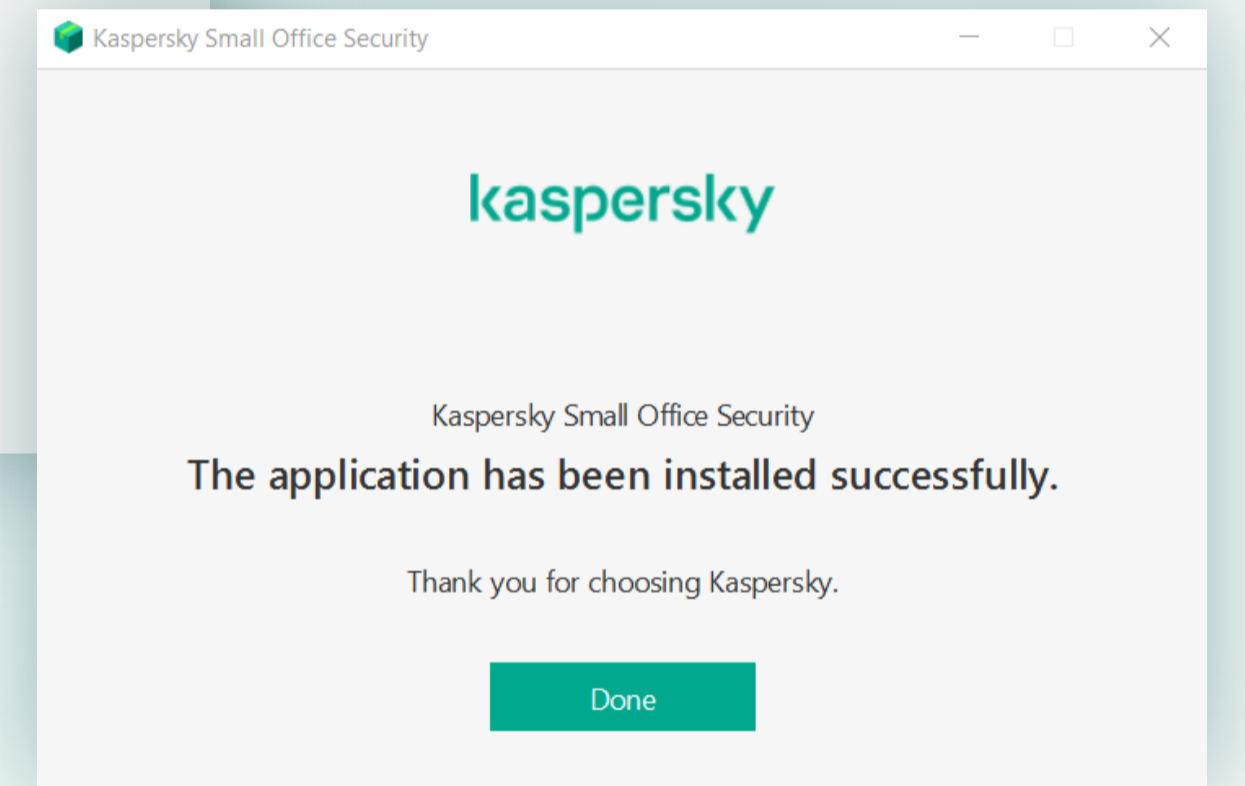

# Four easy steps to deploy protection

Choose your operating system (Windows, Mac, Android) and download the relevant application.

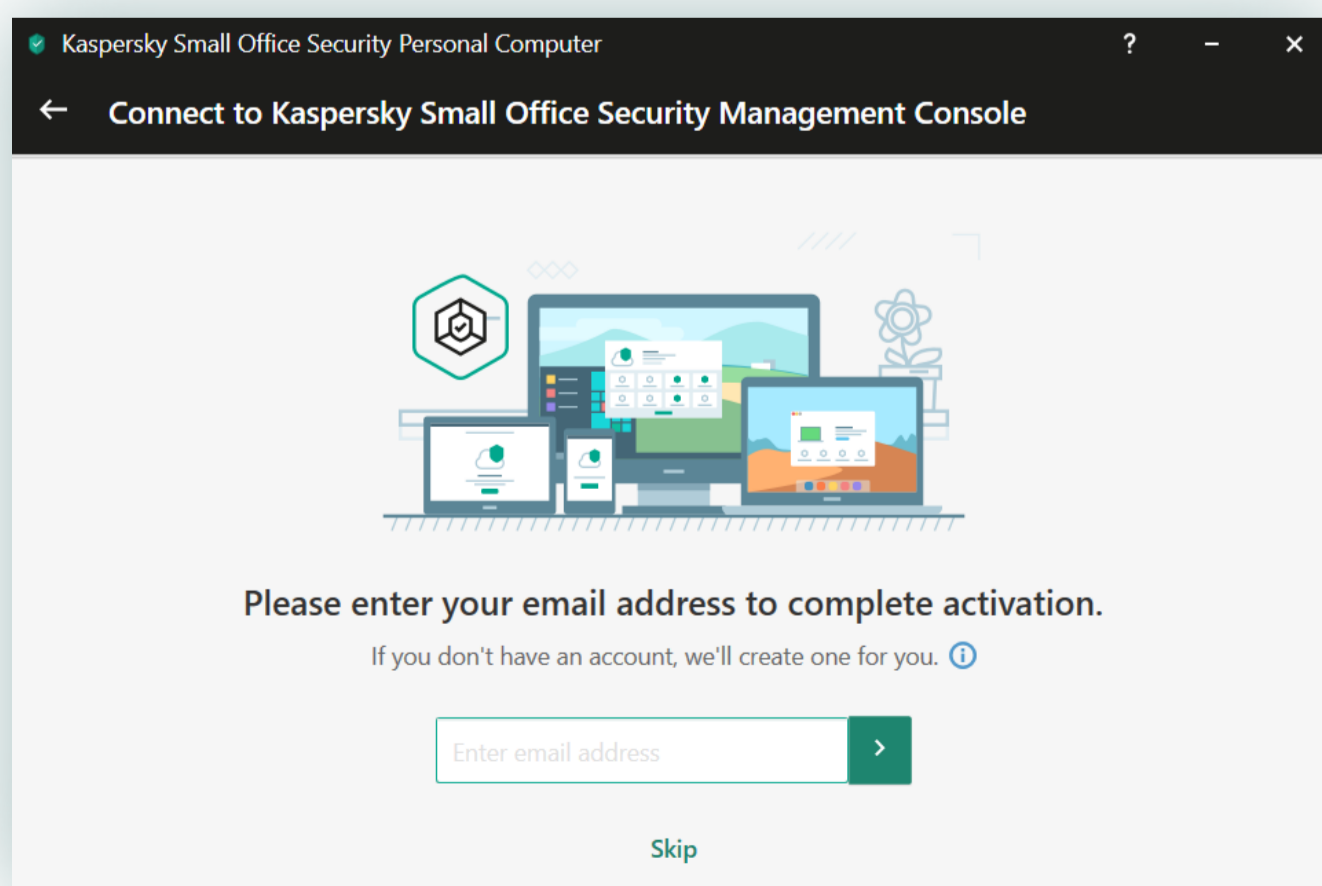

Continue to click 'next' through the installation wizard.

If you purchased the license, insert your activation code. Otherwise, activate the trial version.

Decided to buy rather than try? No problem, just click 'purchase license'.

## Perfect, now you're protected!

Sign up to the KSOS portal to protect and manage your devices from the online console. (You can also skip it at this stage and do it later from a link.)
