

# Product Environmental Report

## MacBook Air with M2 chip

Date introduced  
June 6, 2022

### Made with better materials

**100%**

recycled aluminum in  
the enclosure

**90%**

recycled steel in the  
battery tray

### Tackling climate change

**100%**

We're committed to making our products  
100% carbon neutral by 2030.

### Energy efficient

**70%**

less energy consumed than  
the ENERGY STAR® energy  
efficiency requirement

### Smarter chemistry<sup>1</sup>

- Arsenic-free display glass
- Mercury-free
- Brominated flame retardant-free
- PVC-free
- Beryllium-free

### Responsible packaging

**100%**

of the wood fiber  
comes from recycled  
and responsible  
sources

**96%**

of the packaging is  
fiber-based, due to  
our work to use less  
plastic in packaging

### Apple Trade In

Return your device through  
Apple Trade In, and we'll give it  
a new life or recycle it for free.

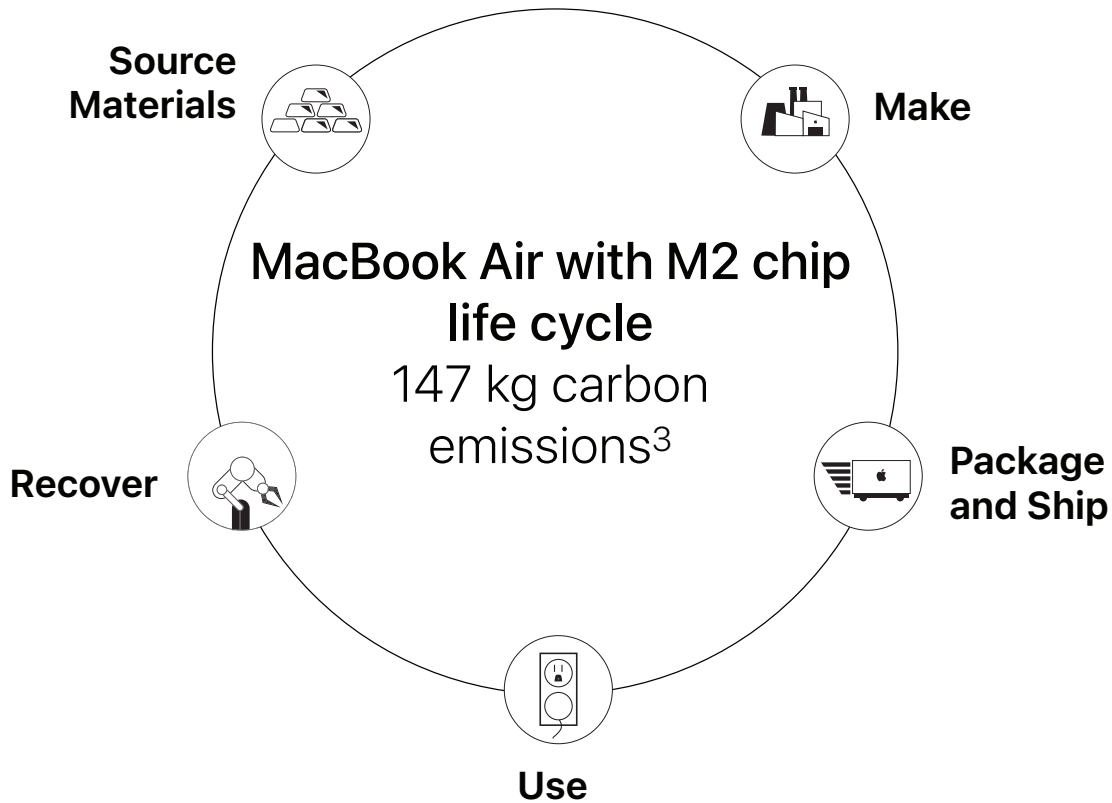

## First Apple product to use certified recycled steel— now in the battery tray

# Taking responsibility for our products at every stage

We take responsibility for our products throughout their life cycles—including the materials they are made of, the people who assemble them, and how they are recycled at end of life. And we focus on the areas where we can make the biggest difference for our planet: reducing our impact on climate change, conserving important resources, and using safer materials.

**We sell millions of products. So making even small adjustments can have a meaningful impact.**

## Carbon footprint

We continue to make progress in reducing Apple’s contribution to climate change—by focusing on making energy-efficient products with renewable or recycled materials and with renewable energy. An increase in suppliers’ use of renewable energy through our Supplier Clean Energy Program helped reduce the product’s carbon footprint by 7 percent compared with the previous generation.<sup>4</sup> Apple is committed to using carbon life cycle assessments to identify opportunities to drive down product greenhouse gas emissions.

### MacBook Air with M2 chip life cycle carbon emissions

69%	Production
8%	Transport
22%	Use
<1%	End-of-life processing

# Source Materials

MacBook Air with M2 chip is the first Apple product to use certified recycled steel—found in the battery tray.

To conserve important resources, we work to reduce the material we use and aim to one day source only recycled or renewable materials in our products. And as we make this transition, we remain committed to the responsible sourcing of primary materials. We map many materials, some to the mineral source, and establish the strictest standards for smelters and refiners. Apple also requires 100 percent of identified tin, tantalum, tungsten, gold, cobalt, and lithium smelters and refiners to participate in third-party audits.<sup>5</sup> We're proud to be recognized as a worldwide leader in the responsible sourcing of minerals in our products. Our product designs also consider the safety of those who make, use, and recycle our products, restricting the use of hundreds of harmful substances. Our standards go beyond what's required by law to protect people and the environment.

## Rare earth elements

We use 100 percent recycled rare earth elements in all magnets, representing 98 percent of the total rare earth elements in the device.

## Steel

We use 90 percent recycled steel in the battery tray—a first for Apple.

## Tin

We use 100 percent recycled tin in the solder of the main logic board.

## Plastic

We're transitioning from fossil fuel-based plastics to those made from renewable or recycled sources. For MacBook Air with M2 chip, we use 35 percent or more recycled plastic in 10 components.

## Aluminum

Apple created an aluminum alloy made of 100 percent recycled aluminum, which we use for the enclosure of MacBook Air with M2 chip.<sup>6</sup> This alloy delivers the same strength, durability, and flawless finish—without mining any new bauxite (aluminum ore) from the earth.

## Smarter chemistry

MacBook Air with M2 chip is free of harmful substances like beryllium, brominated flame retardants, PVC, phthalates, arsenic in the display glass, and mercury.<sup>1</sup> And 100 percent of the materials in MacBook Air with M2 chip are covered by our [Regulated Substances Specification](#). We go beyond what's required by aiming to understand the non-regulated substances in every part of every product—an effort that requires an industry-leading level of transparency through the entire supply chain. We consistently identify the makeup of over 75 percent by mass of Mac devices.

# Make

The Apple Supplier Code of Conduct sets strict standards for the protection of people in our supply chain and the planet that we all share. Every year, we assess our suppliers' performance in upholding the standards required by our Code.

We work closely with our suppliers to provide safe and healthy workplaces where people are treated with dignity and respect, and to reduce suppliers' environmental impact. Our requirements apply across our supply chain and include the responsible sourcing of materials. From the strong foundation set by our Code, we go further—from helping suppliers transition to renewable energy, to providing educational opportunities for their employees, to supporting final assembly suppliers in reducing waste.

## Greener chemicals

All established MacBook Air with M2 chip final assembly supplier sites use safer cleaners and degreasers in their manufacturing processes, as determined by methodologies like the GreenScreen® assessment.<sup>7</sup>

## Zero Waste to Landfill

No established MacBook Air with M2 chip final assembly supplier sites generate any waste sent to landfill.<sup>8</sup>

## Supplier energy use

All MacBook Air with M2 chip final assembly supplier sites are transitioning to 100 percent renewable energy for Apple production.

# Package and Ship

MacBook Air with M2 chip packaging is made with 100 percent recycled and responsibly sourced wood fiber.

To improve our packaging, we are working to eliminate plastics, increase recycled content, and use less packaging overall. All of the wood fiber in our packaging is either recycled or comes from responsibly managed forests.<sup>9</sup> And we have protected or created enough responsibly managed forests to cover all the virgin wood fiber we use in our packaging.<sup>10</sup> This ensures working forests are able to regrow and continue to clean our air and purify our water.

**96%**

of the packaging<sup>11</sup> is fiber-based, due to our work to use less plastic in packaging

**45%**

recycled content in fiber packaging

**100%**

of the virgin wood fiber in the packaging comes from responsibly managed forests<sup>9</sup>

# Use

MacBook Air with M2 chip uses 70 percent less energy than the requirement for ENERGY STAR.<sup>12</sup>

We design our products to be energy efficient, long-lasting, and safe. MacBook Air with M2 chip uses software and power-efficient components that intelligently manage power consumption. We also run our own Reliability and Environmental Testing Labs, where our products go through rigorous testing before they leave our doors. Our support continues throughout each product's life cycle, with regular software updates to keep devices current and a network of authorized repair professionals to service them, if necessary.

## Energy consumption of ENERGY STAR-rated products

Apple devices consistently rank among the high-performing products rated by ENERGY STAR, which sets specifications that typically reflect the 25 percent most energy-efficient devices on the market. MacBook Air with M2 chip consumes 70 percent less energy than the requirement for ENERGY STAR.<sup>12</sup>

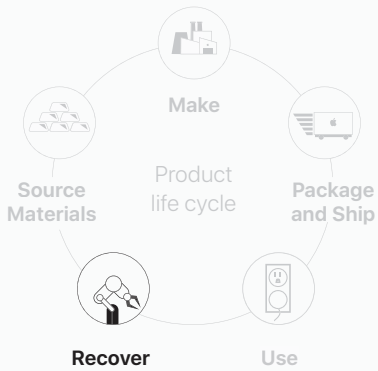

## Designed to last

To ensure durability, we assessed MacBook Air with M2 chip in our Reliability Testing Lab, using rigorous testing methods that simulate customers' experiences.

## Made with smarter chemistry

We apply rigorous controls for materials users touch—all based on recommendations from toxicologists and dermatologists.

# Recover

Return your product with Apple Trade In, and we'll ensure it has a long life or recycle it for free.

When products are used longer, fewer resources are extracted from the earth. That's why we launched Apple Trade In—it offers customers a seamless way to return their old devices and accessories to Apple. Eligible devices can be traded in for credit or an Apple Store Gift Card, while accessories and other devices can be recycled for free.<sup>13</sup> We also offer and participate in [product take-back and recycling collection programs](#) for 99 percent of the countries where we sell products—and we hold our recyclers to high standards. Our efforts to keep harmful substances out of our products also mean our materials are safer to recover and reuse.

# Definitions

**Bio-based plastics:** Bio-based plastics are made from biological sources rather than from fossil-fuel sources. Bio-based plastics allow us to reduce reliance on fossil fuels.

**Carbon footprint:** Estimated emissions are calculated in accordance with guidelines and requirements as specified by ISO 14040 and ISO 14044. There is inherent uncertainty in modeling carbon emissions due primarily to data limitations. For the top component contributors to Apple's carbon emissions, Apple addresses this uncertainty by developing detailed process-based environmental models with Apple-specific parameters. For the remaining elements of Apple's carbon footprint, we rely on industry average data and assumptions. Calculation includes emissions for the following life cycle phases contributing to Global Warming Potential (GWP 100 years) in CO<sub>2</sub> equivalency factors (CO<sub>2</sub>e):

- **Production:** Includes the extraction, production, and transportation of raw materials, as well as the manufacture, transport, and assembly of all parts and product packaging.
- **Transport:** Includes air and sea transportation of the finished product and its associated packaging from manufacturing site to regional distribution hubs. Transport of products from distribution hubs to end customers is modeled using average distances based on regional geography.
- **Use:** Apple assumes a three- or four-year period for power use by first owners based on the product type. Product use scenarios are based on historical customer use data for similar products. Energy use is simulated in various ways; for example, by modeling

daily battery drain or through performing activities like movie and music playback. Geographic differences in the power grid mix have been accounted for at a regional level.

- **End-of-life processing:** Includes transportation from collection hubs to recycling centers and the energy used in mechanical separation and shredding of parts. For more information on the carbon footprint, visit [apple.com/environment/answers](https://apple.com/environment/answers)

**Recycled materials:** Recycling makes better use of finite resources by sourcing from recovered rather than mined materials. Recycled content claims for materials used in our products have been verified by an independent third party to a recycled content standard that conforms to ISO 14021.

**Renewable materials:** We define bio-materials as those that can be regenerated in a human lifespan, like paper fibers or sugarcane. Bio-materials can help us use fewer finite resources. But even though bio-materials have the ability to regrow, they are not always managed responsibly. Renewable materials are a type of bio-material managed in a way that enables continuous production without depleting the earth's resources. That's why we focus on sources that are certified for their management practices.

**Supplier Clean Energy Program:** Since the electricity used to make our products is the largest contributor to our overall carbon footprint, we're helping our suppliers become more energy efficient and transition to new renewable energy sources. We're committed to transitioning our entire manufacturing supply chain to 100 percent renewable electricity by 2030.

# Endnotes

<sup>1</sup> [Apple's Regulated Substances Specification](#) describes Apple's restrictions on the use of certain chemical substances in materials in Apple products, accessories, manufacturing processes, and packaging used for shipping products to Apple's end customers. Restrictions are derived from international laws or directives, regulatory agencies, eco-label requirements, environmental standards, and Apple policies. Every Apple product is free of PVC and phthalates except for AC power cords in India, Thailand (for 2-prong AC power cords), and South Korea, where we continue to seek government approval for our PVC and phthalates replacement. Apple products comply with the European Union Directive 2011/65/EU and its amendments, including exemptions for the use of lead such as high-temperature solder. Apple is working to phase out the use of these exempted substances for new products where technically possible.

<sup>2</sup> MacBook Air with M2 chip achieved a Gold rating in the United States and Canada, in accordance with IEEE 1680.1 or UL 110, and is listed as such on the Electronic Product Environmental Assessment Tool (EPEAT) Registry. EPEAT registers computers, displays, and mobile phones based on environmental requirements in these standards. For more information, visit [www.epeat.net](http://www.epeat.net).

<sup>3</sup> Greenhouse gas emissions were calculated using a life cycle assessment methodology in accordance with ISO 14040 and 14044 standards and based on MacBook Air (M2, 2022) with 256GB storage. We often update our carbon models to leverage new information. As a result, our estimate for the carbon footprint of the previous generation—MacBook Air (M1, 2020) with 256GB storage configuration—decreased from 161 kg CO<sub>2</sub>e (as published in its Product Environmental Report) to 158 kg CO<sub>2</sub>e.

	Carbon footprint	
	MacBook Air (M2, 2022)	MacBook Air (M1, 2020)
256GB storage	147 kg CO <sub>2</sub> e	158 kg CO <sub>2</sub> e
512GB storage	171 kg CO <sub>2</sub> e	—

# Endnotes

<sup>4</sup> MacBook Air (M1, 2020) was used for comparison as the most recently released and similar device. Preproduction MacBook Air standard configuration with 256GB storage was compared to shipping MacBook Air (M1, 2020) standard configuration with 256GB storage configuration since these are the two lowest storage configurations offered.

<sup>5</sup> We map materials in our supply chain and publish a list of identified tin, tantalum, tungsten, and gold (3TG), cobalt, and lithium smelters and refiners in our supply chain. Third-party assessments seek to confirm sourcing practices and are part of our responsible sourcing program. In addition, our efforts consider a broad range of risks, including social, environmental, human rights, and governance risks.

<sup>6</sup> Recycled material claim applies to the enclosure.

<sup>7</sup> Chemicals that meet GreenScreen® benchmark 3 or 4 or other equivalent methodologies like U.S. EPA Safer Choice are considered safer and preferred for use. GreenScreen® is a comprehensive hazard assessment tool that evaluates substances against 18 different criteria. For more information, visit [www.greenscreenchemicals.org](http://www.greenscreenchemicals.org).

<sup>8</sup> All established final assembly supplier sites—or those that have been Apple suppliers for more than one year—for MacBook Air with M2 chip are third-party verified as Zero Waste by UL LLC (UL 2799 Standard). UL requires at least 90 percent diversion through methods other than waste to energy to achieve Zero Waste to Landfill (Silver 90–94 percent, Gold 95–99 percent, and Platinum 100 percent) designations.

<sup>9</sup> Responsible sourcing of wood fiber is defined in Apple's [Sustainable Fiber Specification](#).

<sup>10</sup> For more information about our work to protect and create responsibly managed forests, please read our [Environmental Progress Report](#).

<sup>11</sup> Breakdown of U.S. retail packaging by weight. Select non-plastic, non-fiber materials excluded.

<sup>12</sup> Energy consumption and energy efficiency values are based on the ENERGY STAR Program Requirements for Computers, including the max energy allowance for MacBook Air with M2 chip. For more information, visit [www.energystar.gov](http://www.energystar.gov). ENERGY STAR and the ENERGY STAR mark are registered trademarks owned by the U.S. Environmental Protection Agency.

MacBook Air with M2 chip is tested with a fully charged battery and powered by the 30W USB-C Power Adapter with the USB-C to MagSafe 3 Cable (2m).

- Off: Lowest power mode of the system. System is shut down.
- Sleep: Low power state that is entered automatically after 10 minutes of inactivity (default), or by selecting Sleep from the Apple menu. Wake for network access enabled.
- Idle—Display on: System is on and has completed loading macOS. Display brightness was set as defined by ENERGY STAR Program Requirements for Computers and Auto-Brightness was turned off. Connected to Wi-Fi.
- Power adapter, no-load: Condition in which the 30W USB-C Power Adapter with the USB-C to MagSafe 3 Cable (2m) is connected to AC power, but not connected to the system.
- Power adapter efficiency: Average of the 30W USB-C Power Adapter with the USB-C to MagSafe 3 Cable (2m) measured efficiency when tested at 100 percent, 75 percent, 50 percent, and 25 percent of the power adapter's rated output current.

Mode	Power consumption for MacBook Air with M2 chip		
	100V	115V	230V
Off	0.13W	0.13W	0.15W
Sleep	0.27W	0.26W	0.27W
Idle—Display on	3.09W	3.14W	3.18W
Power adapter, no-load	0.07W	0.07W	0.08W
Power adapter efficiency	88.8%	89.1%	88.8%

<sup>13</sup> Trade-in values vary based on the condition, year, and configuration of your trade-in device, and may also vary between online and in-store trade-in. You must be at least 18 years old. In-store trade-in requires presentation of a valid, government-issued photo ID (local law may require saving this information). Additional terms from Apple or Apple's trade-in partners may apply.
