NATIONAL CENSUS OF FATAL OCCUPATIONAL INJURIES IN 2018

There were 5,250 fatal work injuries recorded in the United States in 2018, a 2 percent increase from the 5,147 in 2017, the U.S. Bureau of Labor Statistics reported today. (See chart 1 and table 1.) The fatal work injury rate remained unchanged at 3.5 per 100,000 full-time equivalent (FTE) workers. (See chart 2.) These data are from the Census of Fatal Occupational Injuries (CFOI).

Chart 1. Number of fatal work injuries, 2006-18

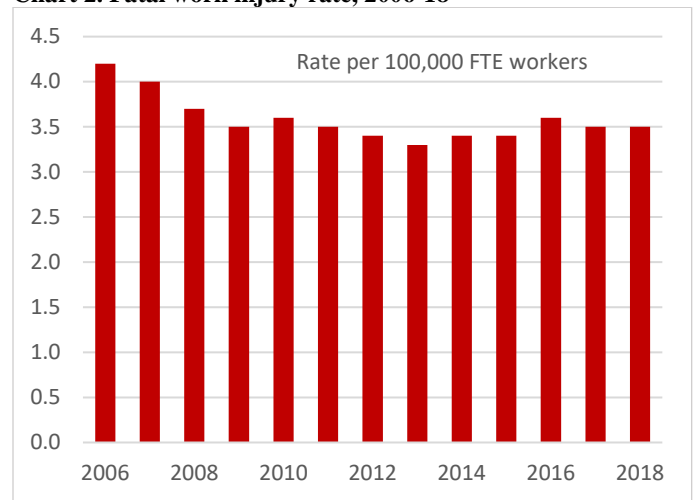

Chart 2. Fatal work injury rate, 2006-18

Fatal event or exposure

- Transportation incidents remained the most frequent type of fatal event at 2,080, accounting for 40 percent of all work-related fatalities. (See chart 3 and table 2.)
- Incidents involving contact with objects and equipment increased 13 percent (from 695 to 786), driven by a 39 percent increase in workers caught in running equipment or machinery and a 17 percent increase in workers struck by falling objects or equipment.
- Unintentional overdoses due to nonmedical use of drugs or alcohol while at work increased 12 percent from 272 to 305. This is the sixth consecutive annual increase.
- Violence and other injuries by persons or animals increased 3 percent in 2018, due to an 11 percent increase in work-related suicides from 275 to 304.
- Fatal falls, slips, and trips decreased 11 percent to 791, after reaching a series high of 887 in 2017. This decline was due to a 14 percent drop in falls to a lower level (713 to 615), the lowest total since 2013.

Chart 3. Fatal work injuries by major event or exposure, 2016-18

Occupation

- Driver/sales workers and truck drivers had the most fatalities of any broad occupation group at 966. Among all detailed occupations, heavy and tractor-trailer truck drivers had the most fatalities at 831.
- In 2018, logging workers, fishers and related fishing workers, aircraft pilots and flight engineers, and roofers all had fatality rates more than 10 times the all-worker rate of 3.5 fatalities per 100,000 FTE workers. (See chart 4.)
- Police and sheriff's patrol officers had 108 fatalities in 2018, up 14 percent from 2017.
- Fatal injuries to taxi drivers and chauffeurs declined by 24 percent to 47, the lowest total since 2003 when comparable data for the occupation were first available.

Fatal injury counts by occupation will be available shortly at www.bls.gov/iif/oshwc/foi/all_worker.xlsx.

Fatality rates by occupation will be available shortly at www.bls.gov/iif/oshwc/foi/foi_rates_2018hb.xlsx.

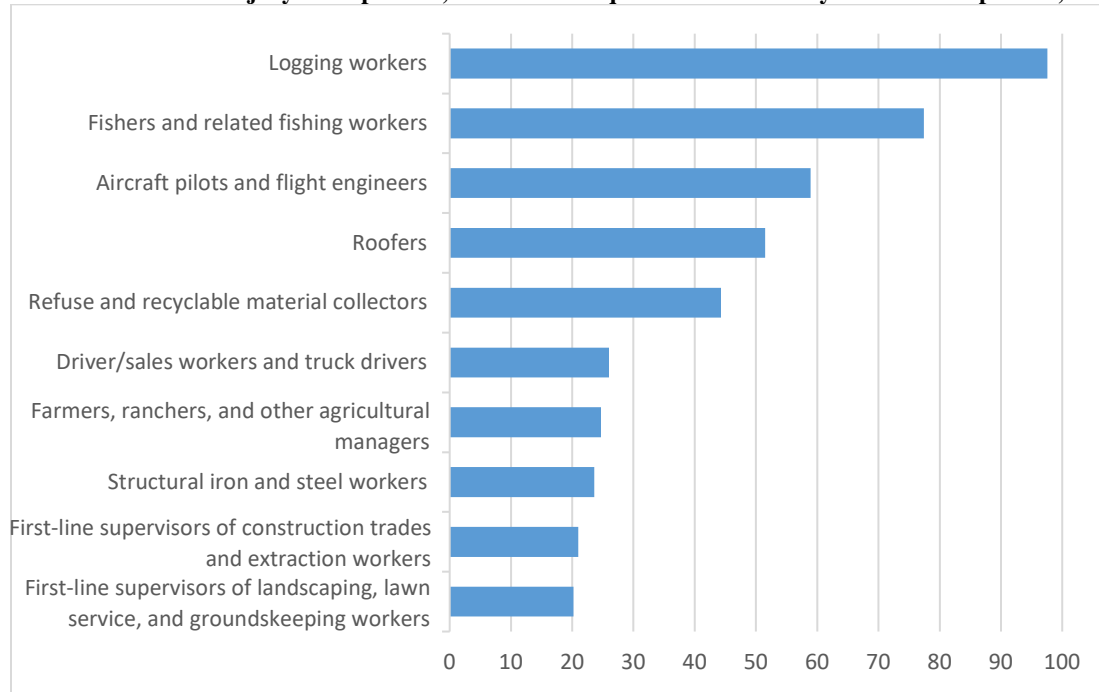

Independent workers

In 2016, the CFOI began identifying fatal injuries to independent workers. Independent workers are involved in a work relationship that is finite and involves a single task, short-term contract, or freelance work.

- In 2018, there were 621 fatal injuries to independent workers, up from 613 in 2017.
- Independent workers comprised 12 percent of all fatal injuries in 2018.
- Occupations with the most fatal work injuries to independent workers in 2018 were heavy and tractor trailer-truck drivers (96), followed by first-line supervisors of construction trades and extraction workers (61), and construction laborers (48).

Fatal occupational injury data for independent workers will be available shortly at www.bls.gov/iif/oshwc/foi/independent-workers.xlsx.

Chart 4. Fatal work injury rates per 100,000 full-time equivalent workers by selected occupations, 2018

Worker demographics

- Fatalities to non-Hispanic Black or African American workers increased 16 percent to 615 in 2018, the highest total since 1999. Their fatal injury rate also increased from 3.2 per 100,000 FTE workers in 2017 to 3.6 in 2018.
- Hispanic or Latino workers experienced 961 fatalities in 2018, a 6 percent increase from 2017. Sixty-seven percent of fatally-injured Hispanic or Latino workers were born outside of the United States.
- Though the number of fatalities declined for workers age 65 years and over in 2018, their fatal work-injury rate is still more than double the all-worker rate. (See table 1.)
- A total of 20 states and the District of Columbia had fewer fatal injuries in 2018 than 2017, while 28 states had more; Arkansas and Oklahoma had the same number as 2017. (See table 5.)

Fatal occupational injury data for foreign-born Hispanic or Latino workers will be available shortly at www.bls.gov/iif/oshwc/cfoi/foreign_b_h.xlsx.

TECHNICAL NOTES

Background

The Census of Fatal Occupational Injuries (CFOI), part of the Bureau of Labor Statistics (BLS) Occupational Safety and Health Statistics (OSHS) program, is a count of all fatal work injuries occurring in the U.S. during the calendar year. The CFOI uses a variety of state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This ensures counts are as complete and accurate as possible. For the 2018 data, over 24,800 unique source documents were reviewed as part of the data collection process. For technical information and definitions for the CFOI, see the BLS Handbook of Methods on the BLS website at www.bls.gov/opub/hom/cfoi/home.htm. Fatal injury rates are subject to sampling errors as they are calculated using employment data from the Current Population Survey, a sample of households, and the BLS Local Area Unemployment Statistics. For more information on measurement error, see www.bls.gov/iif/osh_rse.htm.

The Survey of Occupational Injuries and Illnesses (SOII), another component of the OSHS program, presents frequency counts and incidence rates by industry, detailed case circumstances, and worker characteristics for nonfatal workplace injuries and illnesses for cases that result in days away from work. Counts and incidence rates by industry, case type, case circumstances and worker characteristics for 2018 were published in November 2019. For these data, access the BLS website: www.bls.gov/iif.

Identification and verification of work-related fatalities

In 2018, work relationship could not be independently verified by multiple source documents for 12 fatal work injuries. However, the information on the initiating source document for these cases was sufficient to determine that the incident was likely to be job-related. Data for these fatalities are included.

Federal/State agency coverage

The CFOI includes data for all fatal work injuries, some of which may be outside the scope of other agencies or regulatory coverage. Comparisons between CFOI counts and those released by other agencies should account for the different coverage requirements and definitions used by each agency. For more information on the scope of CFOI, see www.bls.gov/iif/cfoiscope.htm and www.bls.gov/opub/hom/cfoi/concepts.htm.

Acknowledgements

BLS thanks the participating states, New York City, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and Guam for their efforts in collecting accurate, comprehensive, and useful data on fatal work injuries. Although data for Puerto Rico, the U.S. Virgin Islands, and Guam are not included in the national totals, results for these jurisdictions are available. Participating agencies may be contacted to request more detailed state results. Contact information is available at www.bls.gov/iif/oshstate.htm.

BLS also appreciates the efforts of all federal, state, local, and private sector entities that provided source documents used to identify fatal work injuries. Among these agencies are the Occupational Safety and Health Administration; the National Transportation Safety Board; the U.S. Coast Guard; the Mine Safety and Health Administration; the Office of Workers' Compensation Programs (Federal Employees' Compensation and Longshore and Harbor Workers' Compensation divisions); the Federal Railroad Administration; the National Highway Traffic Safety Administration; state vital statistics registrars, coroners, and medical examiners; state departments of health, labor, and industrial relations and workers' compensation agencies; state and local police departments; and state farm bureaus.

Information in this release is available to sensory-impaired individuals. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Other races or not reported (non-Hispanic)	57	50	N/A	N/A	N/A	N/A

¹ Fatal injury rates are per 100,000 full-time equivalent (FTE) workers. Fatal injury rates exclude workers under the age of 16 years, volunteers, and resident military. Complete national rates can be found at www.bls.gov/iif/oshcfoi1.htm#rates. Complete state rates can be found at www.bls.gov/iif/oshstate.htm. National and state rates are calculated using different methodology and cannot be directly compared. See www.bls.gov/opub/hom/cfoi/calculation.htm#comparisons-of-national-and-state-rates for more information on how rates are calculated and caveats for comparison. N/A means a rate was not published for this group.

² Fatal injury rates rely on the census figures from the Census of Fatal Occupational Injuries (CFOI) and the employment from the Current Population Survey (CPS). CPS is a sample of households that is designed to represent the civilian noninstitutional population of the United States. Sampling errors occur in the CPS because observations are made on a sample, not on the entire population. The margin of error (MOE) is a measure of dispersion around the estimated fatal injury rate, expressed at the 95% confidence level. For more on confidence intervals, see www.bls.gov/iif/osh_rse.htm. While the MOE measures the variance in the employment calculations, small fatal injury counts can vary substantially from year to year. See www.bls.gov/iif/dangerous-jobs.htm for more information.

³ The CFOI has published data on fatal occupational injuries for the United States since 1992. During this time, the classification systems and definitions of many data elements have changed. See the CFOI Definitions page (www.bls.gov/iif/oshcfoi.htm) for a more detailed description of each data element.

⁴ May include volunteers and workers receiving other types of compensation.

⁵ Includes self-employed workers, owners of unincorporated businesses and farms, paid and unpaid family workers, and may include some owners of incorporated businesses or members of partnerships.

⁶ Persons identified as Hispanic or Latino may be of any race. The race categories shown exclude data for Hispanics and Latinos.

Note: Data for all years are final. Totals for major categories may include subcategories not shown separately. CFOI fatal injury counts exclude illness-related deaths unless precipitated by an injury event.

¹ Fatal injury rates are per 100,000 full-time equivalent (FTE) workers. Fatal injury rates exclude workers under the age of 16 years, volunteers, and resident military.

Complete national rates can be found at www.bls.gov/iif/oshcfoi1.htm#rates. Complete state rates can be found at www.bls.gov/iif/oshstate.htm. National and state rates are calculated using different methodology and cannot be directly compared. See www.bls.gov/opub/hom/cfoi/calculation.htm#comparisons-of-national-and-state-rates for more information on how rates are calculated and caveats for comparison. N/A means a rate was not published for this group.

² Fatal injury rates rely on the census figures from the Census of Fatal Occupational Injuries (CFOI) and the employment from the Current Population Survey (CPS). CPS is a sample of households that is designed to represent the civilian noninstitutional population of the United States. Sampling errors occur in the CPS because observations are made on a sample, not on the entire population. The margin of error (MOE) is a measure of dispersion around the estimated fatal injury rate, expressed at the 95% confidence level. For more on confidence intervals, see www.bls.gov/iif/osh_rse.htm. While the MOE measures the variance in the employment calculations, small fatal injury counts can vary substantially from year to year. See www.bls.gov/iif/dangerous-jobs.htm for more information.

³ The CFOI has published data on fatal occupational injuries for the United States since 1992. During this time, the classification systems and definitions of many data elements have changed. See the CFOI Definitions page (www.bls.gov/iif/oshcfoi1.htm) for a more detailed description of each data element. Industry is based on the 2012 North American Industry Classification System (NAICS).

⁴ Includes all fatal occupational injuries meeting this ownership criterion across all specified years, regardless of industry classification system.

⁵ Includes fatal injuries at all establishments categorized as Mining, quarrying, and oil and gas extraction (Sector 21) in the North American Industry Classification System, including establishments not governed by the Mine Safety and Health Administration (MSHA) rules and reporting, such as those in Oil and Gas Extraction.

⁶ Includes fatal injuries to workers employed by governmental organizations regardless of industry. Includes all fatal occupational injuries meeting this ownership criterion across all specified years, regardless of industry classification system.

Note: Data for all years are final. Totals for major categories may include subcategories not shown separately. CFOI fatal injury counts exclude illness-related deaths unless precipitated by an injury event.
