

OEM Solutions Capabilities

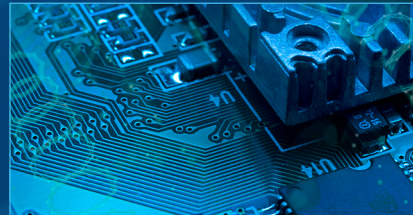

Designing for the future

At OEM Solutions, we help bring solutions for the digital business transformation age to life. Our industry experience, especially at the edge, helps us create unique custom builds. And though our access to a secure supply chain, global support and distribution are all key elements of our success, our main innovation is putting you at the center of everything we do.

Plan & Manage your solution

Our industry experts will guide your design for technology, lifecycle management, deployment and ongoing services and dedicated support to help you right-size your complex solution securely and globally. And once the plan is in place, you'll have Dell program management to help keep a tight pulse on every move.

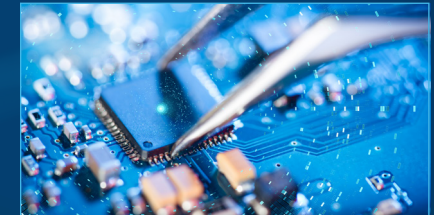

Roll out ready designs

Get to market fast and prepared with OEM-tailored products that provide stability, extended life, change management, unbranded assets, industrialized durability and certifications that meet your industry requirements, right out of the box.

Customize innovation

If you can dream it, together we can design, deliver and support it. Make your ideas a reality by partnering with our technology experts for fast delivery of your fully functioning and validated solution in your unique environment, wrapped nicely in your brand.

Partner with engineering

With OEM Solutions, you'll have a partner at every step of your journey with our dedicated team of engineers, from design, development, factory and deployment to onsite residency engineering services with technology futureproofing via our architects and CTO.

OEM brings designed solutions to life

Complex challenges require innovation. It's possible to get the optimal solution for today that is future proofed for tomorrow.
