 Applicable/supporting case law: [Click here to enter text.](#)
 Applicable/supporting scientific literature: [Click here to enter text.](#)
 Other information (please specify):

B. REQUIRED ADDITIONAL COMMENTS TO SUPPORT JD. EXPLAIN RATIONALE FOR DETERMINATION THAT THE REVIEW AREA ONLY INCLUDES DRY LAND:

A Waters Delineation Report was completed for the Tipmont REMC – Linden Substation Site by Cardno consultants. The report documents that no evidence of swales or ditches was observed within site boundaries. Aerial maps and topographical maps show no tributaries running through the site. The Waters Delineation Report documents that no wetland indicators were present at the five data points taken throughout the site. Soil Survey Maps show site soils to be non-hydric, NWI Wetland Maps show no wetlands present at the site, and topographical maps show no evidence of depressions within the site boundaries. As such, there are no ‘waters of the U.S.’ present at the Tipmont REMC – Linden Substation Site.
