		The review area is comprised entirely of dry land (i.e., there are no waters or water features, including
		wetlands, of any kind in the entire review area). Rationale: N/A or describe rationale.
		There are "navigable waters of the United States" within Rivers and Harbors Act jurisdiction within the

		(complete appropriate tables in Section II.C).
	$\boxtimes$	There are waters or water features excluded from Clean Water Act jurisdiction within the review area
		(complete table in Section II.D).

<sup>&</sup>lt;sup>1</sup> Map(s)/figure(s) are attached to the AJD provided to the requestor.

<sup>&</sup>lt;sup>2</sup> If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

<sup>&</sup>lt;sup>3</sup> A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where upstream or downstream limits or lake borders are established. A standalone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD Form.

## D. Excluded Waters or Features

Excluded waters $((b)(1) - (b)(12))$ : <sup>4</sup>								
Exclusion Name Exclusion Size			Exclusion <sup>5</sup>	Rationale for Exclusion Determination				
UNT 1 to Clifty Creek			(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool.	Stream exhibits ephemeral flow during normal climatic conditions (see APT Data Report, Waters Report photos 10-14).				
UNT 2 to Clifty Creek	153	linear feet	(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool.	Stream exhibits ephemeral flow during normal climatic conditions (see APT Data Report, Waters Report photos 15-19).				
Wetland A			(b)(1) Non-adjacent wetland.	Emergent wetland neither abuts nor is inundated by floodwater in a typical year from an (a)(1) – (a)(3) water.				

## **III. SUPPORTING INFORMATION**

- **A. Select/enter all resources** that were used to aid in this determination and attach data/maps to this document and/or references/citations in the administrative record, as appropriate.
  - ☑ Information submitted by, or on behalf of, the applicant/consultant: Waters of the US Report, SR 9 and SR 46 Intersection Improvement Project, Bartholomew County, Indiana (Des. No. 1902887), dated February 8, 2021, by HNTB consultants

This information is and is not sufficient for purposes of this AJD.

Rationale: The Waters Report maps and photos are sufficient for determination of resources. Waters Report data shows UNT 2 to Clifty Creek to exhibit ephemeral flow (instead of intermittent flow) during normal climatic conditions.

- ☐ Previous Jurisdictional Determinations (AJDs or PJDs): ORM Number(s) and date(s).
- Antecedent Precipitation Tool: provide detailed discussion in Section III.B.

### Other data sources used to aid in this determination:

Data Source (select)	Name and/or date and other relevant information
USGS Sources	N/A.
USDA Sources	N/A.
NOAA Sources	N/A.
USACE Sources	N/A.
State/Local/Tribal Sources	N/A.

<sup>&</sup>lt;sup>4</sup> Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

<sup>&</sup>lt;sup>5</sup> Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

- **B.** Typical year assessment(s): The APT was utilized for the site visit completed by HNTB consultants. For the 10/6/2020 delineation site visit, the data shows normal climatic conditions during the wet season (see 2020-10-06\_APT Data.pdf). Therefore, consultant observations and APT data indicate that the hydrologic conditions observed at the site are considered "typical year" conditions.
- C. Additional comments to support AJD: N/A or provide additional discussion as appropriate.
