B. REQUIRED ADDITIONAL COMMENTS TO SUPPORT JD. EXPLAIN RATIONALE FOR DETERMINATION THAT THE REVIEW AREA ONLY INCLUDES DRY LAND: After a review of the aquatic resource delineation report prepared by Civil Solutions Group, Inc. on April 4, 2018, it has been determined that the 0.98 acre project site consists entirely of uplands and upland features. The National Wetlands Inventory map, historical imagery, and Natural Resources Conservation Service Soil Survey each support this determination – in addition, the data collected on the site has neither vegetation nor hydrology that would indicate possible wetlands. Imagery shows historical wetlands that may have been part of the Utah Lake system; however, due to surrounding development and the distance from Utah Lake, it does not appear that a subsurface hydrologic connection exists. A previous determination for file SPK-2002-50388 was completed on several neighboring parcels, and no wetlands were found to be directly abutting the Franklin School site.

¹ This form is for use only in recording approved JDs involving dry land. It extracts the relevant elements of the longer approved JD form in use since 2007 for aquatic areas and adds no new fields.
