 Branch

Subject: Updated: Soliciting Comments on the Continuation of the
 Probabilistic Winter Precipitation Forecast Experiment until
 April 30, 2023

Updated to extend the comment period through April 30, 2023.

The National Weather Service (NWS) is soliciting comments until April 30, 2023 on the Probabilistic Winter Precipitation Forecast Experiment. The experiment will be extended for additional comment and review this winter at the same 77 Weather Forecast Offices (WFOs) in the continental U.S. that participated last season. There are no changes to the experiment for the 2022-2023 season.

Please submit comments to:

https://www.surveymonkey.com/r/WinterWxProbExp_2022_2023

on a proposal to implement these graphics at all applicable NWS offices (the 77 WFOs participating). Graphical and tabular products will show the low end amount, the official forecast or expected amount, and the high end snow amount that a storm is likely to produce. Examples of these products and a list of participating offices can be viewed at:

https://nws.weather.gov/products/PDD/PDD_WinterWeatherProbabilisticExperiment_2022-2023.pdf

Narrow ranges between the minimum and maximum snowfall totals indicate high forecast certainty, while large ranges between minimum and maximum totals indicate low forecast certainty.
