 Digital and Graphical Information Support Branch

Subject: Updated: Soliciting Public Comments on Prototype Point
Forecast Display through May 15, 2020

Updated to change request for comments date to May 15, 2020 and
for other minor changes.

The Prototype Point Forecast Display is now available to users
and partners. Users and partners are asked to provide feedback
on the new display by May 15, 2020.

The new Prototype Point Forecast Display may be accessed at:

<https://weather.gov/forecastpoints>

This new tool provides design enhancements to the historically
available point-and-click forecast page by adding intuitive
graphics to illustrate forecast elements.

There are two ways to search for a forecast on the Prototype
Point Forecast Display. Either enter your location in the
search box in the upper right portion of the page or click on a
location in the U.S. base map. Users can zoom into specific
areas of the country before clicking for the location to
generate the forecast. More help on usage is provided on the
webpage.

The page layout includes a map for selecting the point forecast
to display, links to forecast discussions and outlooks, a list
of current weather hazards, and a summary of maximum and minimum
values of selected weather elements for the week ahead. The map
may also display additional layers of weather information. A

user may bookmark their specific configuration for later reference.

The NWS will evaluate all comments during this period and will decide what further changes to make to its web presence in the future. This will include an additional comment and review period.

Comments may be provided through May 15, 2020, using the following survey:

<https://www.surveymonkey.com/r/PrototypePointForecastDisplay>
