Subject: Changes to Public and Fire Forecast Zones for NWS
 Weather Forecast Office Houston/Galveston, TX,
 effective March 30, 2021

On or about Tuesday, March 30, 2021, at 100 PM Central Daylight Time (CDT), 1800 Coordinated Universal Time (UTC), the NWS Weather Forecast Office in League City, TX, (HGX) will change Public and Fire Weather Forecast Zones for portions of coastal Galveston County. After this change, all public and fire forecasts and related products will use the new zone numbers and names indicated below.

If March 30, 2021, is declared a Critical Weather Day, this implementation will be postponed to April 1, 2021.

The change will split the Galveston Island and Bolivar Peninsula zone (TXZ438) into two zones: Galveston Island (TXZ438) and Bolivar Peninsula (TXZ439).

This split is needed to keep consistency between the forecast zones and National Hurricane Center breakpoints. The change will make tropical storm, hurricane, and storm surge watches and warnings clearer when NWS refers to the Port Bolivar breakpoint. This change will also provide increased flexibility and improved accuracy of forecast, watch, warning, and advisory products for those zones.
