

**DEPARTMENT OF THE ARMY**  
U.S. ARMY CORPS OF ENGINEERS, SACRAMENTO DISTRICT  
1325 J STREET  
SACRAMENTO CA 95814-2922

408 Permission Section

**PUBLIC NOTICE**

**REQUEST FOR PERMISSION TO ALTER A U.S. ARMY CORPS OF ENGINEERS  
PROJECT UNDER SECTION 408**

**TITLE:** City of Sacramento Sump 155 Improvements (19577)

**PUBLIC NOTICE COMMENT PERIOD:**

Begins: July 13, 2021

Ends: August 11, 2021

**REQUESTER:** In compliance with U.S.C. Title 33, Chapter 9, Subchapter 1, Section 408, the City of Sacramento (requester) has requested permission through the Central Valley Flood Protection Board (non-federal sponsor of the federally authorized project) from the U.S. Army Corps of Engineers (USACE) to alter the Sacramento River Flood Control Project, an existing federal flood risk management project, authorized by the Flood Control Act of 1917.

**LOCATION:** American River, Sacramento County, CA (Attachment 1).

**REQUESTER'S PROPOSED ACTION:** Sump 155 modifications are to remove and replace two (2) 140 feet long 36-inch diameter welded steel pressurized pipes (cumulative length of approximately 280 feet long) with High-density polyethylene (HDPE) pipes; and to remove and replace one (1) 110 feet long, 42-inch diameter corrugated metal gravity pipe with a 42-inch diameter reinforced concrete pipe (RCP). Additional improvements include installing two (2) positive closure vaults, installation of a gate riser structure and sluice gate for the new 42-inch diameter RCP, removing and replacing the existing outfall structure, constructing a retaining wall and removing and replacing the existing fence at the sump station near the landside levee toe, installing stairs on waterside levee slopes, installing aggregate surface along the disturbed section of the levee crown and maintenance access road. Lastly, up to four (4) trees may be removed from the waterside of the levee (Attachment 2 & Attachment 3).

**ENVIRONMENTAL IMPACTS OF PROPOSED ACTION:** The proposed project is located along the south, left bank of the American River approximately 550 feet north of the J Street bridge in Sacramento, CA. The project site provides suitable habitat for the threatened valley elderberry longhorn beetle (VELB), threatened Central Valley Spring-run (CVSR) Chinook salmon Evolutionarily Significant Unit (ESU), endangered Sacramento River Winter-run Chinook salmon ESU, and threatened California Central Valley (CCV) steelhead DPS. Critical habitats for the threatened CVSR Chinook salmon ESU and threatened CCV steelhead DPS exist within the project area and will be included in the Section 7 consultation.

USACE has initiated consultation, for impacts to the abovementioned species, with the United States Fish and Wildlife Service and the National Marine Fisheries Service under Section 7 of the Endangered Species Act. USACE will also be initiating consultation under the Wild and Scenic Rivers Act, with the National Parks Service, as appropriate.

USACE will be conducting Section 106 consultation under the National Historic Preservation Act with the State Historic Preservation Office and appropriate Native American Tribes. USACE could have additional, future consultation responsibilities under certain circumstances, such as unanticipated discovery.

**AUTHORITY:** The authority to grant permission for temporary or permanent use, occupation or alteration of any USACE civil works project is contained in Section 14 of the Rivers and Harbors Act of 1899, as amended, codified at 33 U.S.C. 408 ("Section 408"). Section 408 authorizes the Secretary of the Army, on the recommendation of the Chief of Engineers, to grant permission for the alteration or occupation or use of a USACE project if the Secretary determines that the activity will not be injurious to the public interest and will not impair the usefulness of the project. The Secretary of Army's authority under Section 408 has been delegated to the USACE, Chief of Engineers. The USACE Chief of Engineers has further delegated the authority to the USACE, Directorate of Civil Works and Division and District Engineers, depending upon the nature of the activity.

**LIMITS OF SECTION 408 AUTHORITY:** A requester has the responsibility to acquire all other permissions or authorizations required by federal, state, and local laws or regulations, including any required permits from the USACE Regulatory Program under Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403), Section 404 of the Clean Water Act (33 U.S.C. Section 1344), and/or Section 103 of the Marine Protection, Research and Sanctuaries Act of 1972 (33 U.S.C. 1413). In addition, an approval under Section 408 does not grant any property rights or exclusive privileges nor does it authorize any injury to the property or rights of others.

**EVALUATION FACTORS:** The decision whether to grant the requested permission for project alteration under Section 408 will be based on several factors. That decision will reflect the national concern for both protection and utilization of important resources. The benefit which reasonably may be expected to accrue from the proposal must be balanced against its reasonably foreseeable detriments. Review of requests for alteration will be reviewed by a USACE technical review team considering the following factors:

- 1) Impair the Usefulness of the Project Determination. The review team will determine if the proposed alteration would limit the ability of the USACE project to function as authorized, or would compromise or change any authorized project conditions, purposes or outputs. In order for an alteration to be approved, the requester must demonstrate that the alteration does not impair the usefulness of the federally authorized project.

- 2) Injurious to the Public Interest Determination. Proposed alterations will be reviewed to determine the probable impacts, including cumulative impacts, on the public interest. Factors that may be relevant to the public interest evaluation depend upon the type of

USACE project being altered and the nature of the proposed alteration and may include, but are not limited to, such things as conservation, economic development, historic properties, cultural resources, environmental impacts, water supply, water quality, flood hazards, floodplains, residual risk, induced damages, navigation, shore erosion or accretion, and recreation. This evaluation will consider information received from the interested parties, including tribes, agencies, and the public. The benefits that reasonably may be expected to accrue from the proposal must be compared against its reasonably foreseeable detriments. The decision whether to approve an alteration will be determined by the consideration of whether benefits are commensurate with risks and by the net impact of the alteration on the public interest using the public interest factors.

3) Environmental Compliance. A decision on a Section 408 request is a federal action, and therefore subject to the National Environmental Policy Act (NEPA) and other environmental compliance requirements. While USACE is responsible for ensuring environmental compliance, the requester is responsible for providing all information that the Sacramento District identifies as necessary to satisfy all applicable federal laws, executive orders, regulations, policies, and procedures. NEPA and other analysis completed to comply with other environmental statutes (e.g. Endangered Species Act) should be commensurate with the scale and potential effects of the activity that would alter the USACE project. The Sacramento District will work with the requester to determine the requirements, which will be scaled to the likely impacts of the proposed alteration and should convey the relevant considerations and impacts in a concise and effective manner.

**PUBLIC INVOLVEMENT:** The purpose of this notice is to solicit comments from the public; federal, state, and local agencies and officials; tribes; and other interested parties regarding the City of Sacramento Sump 155 Improvements, a proposed alteration to an existing federally authorized project. Comments received within 30 days of publication of this notice will be used in the evaluation of potential impacts of the proposed action on important resources and in the evaluation of whether the proposed alteration would be injurious to the public interest and/or would impair the usefulness of the authorized project. Only the specific activities that have the potential to occupy, use or alter the Sacramento River Flood Control Project will be evaluated. Please limit comments to the area of the alteration and those adjacent areas that would be directly or indirectly affected by the alteration to the Sacramento River Flood Control Project. Please note that all comment letters received are subject to release to the public through the Freedom of Information Act.

**SUBMITTING COMMENTS:** Written comments, referencing Identification Number 19577 must be submitted to the office listed below on or before August 11, 2021.
