INTRODUCTION

This report contains vital statistics data for South Carolina events that occurred in 2008. The purpose of this report is to provide basic reference data for a variety of users. Vital Statistics certificates filed with the Office of Public Health Statistics and Information Services of the South Carolina Department of Health and Environmental Control are the primary source of data presented in this report. These records include certificates of live births, deaths, marriages, divorces and annulments, and reports of fetal deaths and abortions. Data are presented for South Carolina and its 46 counties. Live births, fetal deaths and deaths occurring out-of-state to South Carolina residents are also included in this report. Event information is re-allocated to the state of residence through an agreement of interstate transcript exchange.

Note: In 2008 not all abortions occurring in NC to residents of SC have been reported to NC. Based on previous years numbers we estimate that **in 2008 between 1,000 and 1,500 abortions occurring in NC to residents of SC were not reported.**

In South Carolina fetal death and death certificates are filed by hospitals, physicians, coroners, midwives and funeral directors in the county health department where the event occurred. Each county health department forwards the certificates weekly to the Office of Vital Records. In 2004, South Carolina established the Web Birth system. This allows hospitals to file all birth certificate information via secured internet connection. Marriage and divorce certificates are transmitted to this office from the County Probate Court and Clerk of Court, respectively.

Population estimates for the intercensal years were provided by the National Center for Health Statistics.

This and other reports on South Carolina vital statistics including Death Supplement are available on the internet at the web address listed below. Click on the Health tab to the right of DHEC Home. Then click on Data under Topics. Scroll to bottom of page and see links under the Vital Statistics heading.

More data are available on South Carolina Community Assessment Network (<http://scanqis.dhec.sc.gov/scan/>); our interactive data query website.

SUMMARY OF VITAL EVENTS

“The State Flag”

Officially adopted by the General Assembly in 1861

On an Average Day in South Carolina, 2008

DID YOU KNOW THAT IN 2008:

The Most Common First Names by Gender and Race for South Carolina

Male		
All Races	White	Black & Other
William	William	Jayden
Joshua	Jacob	Jordan
Christopher	Ethan	Joshua
Jayden	John	Christopher
Ethan	James	Elijah
James	Jackson	Cameron
Jacob	Michael	Jeremiah
Michael	Noah	Christian
John	Christopher	Jaden
Jackson	Joshua	Michael
Noah	Landon	Anthony
Elijah	Andrew	Isaiah
Matthew	Matthew	Jaylen
Caleb	Daniel	Zion
Christian	Caleb	James

Female		
All Races	White	Black & Other
Madison	Emma	Destiny
Emma	Emily	Madison
Emily	Madison	Jada
Abigail	Abigail	Trinity
Olivia	Isabella	Aaliyah
Isabella	Olivia	Nevaeh
Ava	Elizabeth	Jayla
Elizabeth	Ava	Makayla
Anna	Anna	Taylor
Addison	Addison	Jasmine
Sarah	Sarah	Gabrielle
Hannah	Caroline	Mariah
Taylor	Sophia	Jordan
Caroline	Hannah	Morgan
Alyssa	Alyssa	Serenity

BIRTHS

The month with the most births: July (5,578)
Youngest Mother: 12 years old

Least Births: November (4,891)
Oldest Mother: 54 years old

DEATHS

The month with the most deaths: December (3,613) Least deaths: September (3,027)
The oldest person that died: 112 years old

MARRIAGES

The youngest bride: 14 years old The youngest groom: 16 years old
The oldest bride: 95 years old The oldest groom: 93 years old
The month with the most marriages: May (3,841) Least marriages: January (1,411)

DIVORCES

The youngest bride to divorce: 17 years old The youngest groom to divorce: 18 years old
The oldest bride to divorce: 87 years old The oldest groom to divorce: 91 years old
The month with the most divorces: September (1,244) Least divorces: December (860)

SUMMARY OF POPULATION

The estimated population of South Carolina for 2008 was 4,479,800; an increase of 72,091 from the 2007 estimated population of 4,407,709. The 2008 population showed an increase of 16.8 percent over the 1998 estimated population of 3,835,960.

1990 and 2000 CENSUS OF POPULATION

Population Density: In 1990, the population density (number of person per square mile of land area) of South Carolina was approximately 115.8. Based on the 2000 census count, the population density had increased to 133.2, a 15.0 percent increase. Approximately 67.4 percent of the 46 counties in South Carolina had population densities less than that of the state in 1990, and 7 of these counties actually had less than 40 people per square mile of land area.

Race and Age: In 1990, there were 2,414,178 white and 1,072,525 black and other persons residing in South Carolina. The 2000 census count, modified by race, recorded a 13.9 percent increase in white population and a 17.7 percent increase in the black and other population. In South Carolina, blacks make up 95.8 percent of the black and other population. As shown below, of the ten-year population change from 1990 to 2000, the 45-54 years age group showed the greatest percentage increase. Only three age groups, under 1 year, 20-24 and 25-34 showed a decrease in population from 1990 to 2000. The age distribution and the percent change in the number of residents from 1990 to 2000 are as follows:

**Table B-1.

FERTILITY PATTERNS

Though the crude birth rate relates the event of birth to the entire population, it does not measure the population exposed to the chance of having a birth since it is based on both sexes in population. However, the crude birth rate is an index to the relative speed at which additions are being made to a population through childbirth. When the event of birth is related to the population exposed at risk, that is, to females of childbearing ages 15-44, a more specific rate is completed.

GENDER RATIO

Out of the total 63,077 live births occurring to South Carolina residents in 2008, male births numbered 32,136 and female births numbered 30,941 giving a ratio of 103.9 males per 100 females. Table C-7 shows the ratio of males to females for the past five years.

Table C-7.
Gender Ratio of Males per 100 Females
South Carolina, 2004-2008
(Residence Data)

Year	Total	Non-Hispanic White	Non-Hispanic Black & Other	Hispanic
2004	105.3	107.1	103.1	102.2
2005	104.8	106.8	101.2	106.5
2006	104.9	105.1	104.0	107.7
2007	103.9	105.3	100.9	106.5
2008	103.9	104.7	101.9	106.5

MULTIPLE BIRTHS

During 2008, a total of 2,123 live births were multiple births. Of that numbers, 2,071 were twins (not sets), 51 were triplets (not sets), and 1 was a quadruplet. The 2,123 multiple births result in a ratio of 1 multiple birth per 30 live births.

ATTENDANT AT BIRTH

Of the 60,404 occurrent births, physicians attended 94 percent. The term “physician” includes osteopaths, residents, interns and externs. Midwives attended 5.6 percent of the total births, Other and unknown attendant accounted for 0.4 percent of the total births. The term “other” includes any specific attendant other than physician, midwife or self-attended, such as a friend or relative, EMT, RN, PA, etc. Included in the “Unknown” category are Not specified or Not classifiable attendants.

AGE OF MOTHER

In 2008, there were 108 live births to resident mothers under 15 years of age and 69 births to resident mothers 45 years of age and over. As shown in Table C-16, women aged 15-44 years were responsible for 99.7 percent of all live births. In 1980, the median age of mothers was 23.8 years. In 1986, the median age increased to 25 and remained there until 1997. The median age rose to 26 in 1997 and then remained unchanged. The median age for 2008 is still 26. The youngest mother to give birth in 2008 was 12 years old and the oldest was 54 years old.

LIVE BIRTHS TO UNMARRIED MOTHERS

In 2008, there were 29,797 live births to resident unmarried mothers in South Carolina, representing 47.2 percent of all live births. As in the past, live births to unmarried mothers occurred more frequently among young mothers. As shown in Table C-20, females under age 20 accounted for 25.0 percent of all live births to unmarried mothers in 2008.

LIVE BIRTHS BY BIRTHWEIGHT

Birthweight distribution by race reveals racial differences. For both races, the highest percentage of births weighed between 3,000-3,499 grams. However, the median birthweight for non-hispanic whites was the greatest, followed by hispanic and non-hispanic black and other. Figure C-7 illustrates the birthweight distribution by race.

Table C-23.
Live Births by Birthweight Groups by Race of Mother:
South Carolina, 2008
(Residence Data)

Weight Group	Total		Non-Hispanic White		Non-Hispanic Black & Other		Hispanic	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
Total	63,077	100.0	34,711	100.0	22,094	100.0	6,229	100.0
Less Than 2,500 grams	6,238	9.9	2,684	7.7	3,151	14.3	397	6.4
Under 500 grams	147	0.2	41	0.1	96	0.4	9	0.1
500-999 grams	426	0.7	162	0.5	248	1.1	16	0.3
1,000-1,499 grams	607	1.0	247	0.7	324	1.5	34	0.5
1,500-1,999 grams	1,129	1.8	486	1.4	570	2.6	73	1.2
2,000-2,499 grams	3,929	6.2	1,748	5.0	1,913	8.7	265	4.3
2,500 or More grams	56,796	90.0	32,006	92.2	18,927	85.7	5,831	93.6
Unknown Weight	43	0.1	21	0.1	16	0.1	1	0.0

LOW WEIGHT LIVE BIRTHS

Live births under 5 pounds 8 ounces or less than 2,500 grams are characterized as low weight live births. Low weight live births accounted for 9.9 percent of the 63,077 resident births in 2008. In relation to age of mother, low weight births were comparatively frequent among very young mothers. In year 2008, 11.8 percent of all lives births to mothers 15-19 were low weight. Only 9.4 percent of all live births to mothers 25-34 were low weight.

¹ Reported pregnancies equal total live births plus abortions plus reported fetal deaths.

² Reported pregnancies, Live Births and Abortions: Rates calculated per 1,000 female population

³ Fetal Deaths: Rates calculated per 1,000 deliveries

⁴ Live Births to Unmarried Mothers: Percentage represents percent of all live births to unmarried females age 10-19

* Includes unknown race

¹ Reported pregnancies equal total live births plus abortions plus reported fetal deaths.

² Reported pregnancies, Live Births and Abortions: Rates calculated per 1,000 female population

³ Fetal Deaths: Rates calculated per 1,000 deliveries

⁴ Live Births to Unmarried Mothers: Percentage represents percent of all live births to unmarried females age 10-14

Table D-3.

¹ Reported pregnancies equal total live births plus abortions plus reported fetal deaths.

² Reported pregnancies, Live Births and Abortions: Rates calculated per 1,000 female population

³ Fetal Deaths: Rates calculated per 1,000 deliveries

⁴ Live Births to Unmarried Mothers: Percentage represents percent of all live births to unmarried females age 15-17

* Includes unknown race

¹ Reported pregnancies equal total live births plus abortions plus reported fetal deaths.

² Reported pregnancies, Live Births and Abortions: Rates calculated per 1,000 female population

³ Fetal Deaths: Rates calculated per 1,000 deliveries

⁴ Live Births to Unmarried Mothers: Percentage represents percent of all live births to unmarried females age 18-19

* Includes unknown race

MARRIAGE / DIVORCE

TRENDS IN MARRIAGES AND DIVORCES

During the twenty-five year period from 1984-2008, marriages in South Carolina have shown steady decrease, as seen in Figure H-1.

Figure H-1.
Marriage and Divorce Rates
South Carolina, 1984-2008
(Occurrence Data)

MARRIAGES

For the calendar year 2008, there were 1,743 interracial marriages in South Carolina, with 1,033 of these being between whites and blacks. Of these 1,033, 72% involved black males and white females. Table H-1 shows a cross-classification of marriages by race of bride and race of groom for South Carolina. Figure H-2 illustrates how marriage rates by race have fluctuated over the last twenty-five years.

Table H-1.
Marriages by Race of Bride and Groom
South Carolina, 2008
(Occurrence Data)

Race of Bride	Total	Race of Groom		
		White	Black and Other	Unknown
Total	33,293	25,359	7,933	1
White	25,658	24,636	1,022	-
Black and Other	7,633	721	6,911	1
Unknown	2	2	-	-

As displayed in Table H-3, there were 2883 persons under the age of twenty who married in South Carolina in 2008. Therefore, teenagers represent 4.3 percent of all persons who married in this state in 2008. As in previous years, the greatest number of marriages occurred between brides and grooms within the 20-24 age group.

As shown in Table H-7, for 24,973 marriages (75%), both the bride and groom were residents of South Carolina.

DIVORCES AND ANNULMENTS

Table H-8 shows that out of the total 25,672 persons in 2008 who were granted divorces, 28 percent were between the ages of 25 and 34.

The white divorce rate has consistently exceeded that of the black and other rate since 1962, the year divorces were first required to be registered with the Office of Public Health Statistics and Information Services. Figure H-3 illustrates the twenty-five year trend in divorces by race.

The most frequently cited grounds for divorce were one year separation, which accounted for 85 percent of all grounds for divorces, followed by adultery, drunkenness, and physical cruelty. Table H-11 shows divorces by legal grounds of decree. As shown in Table H-12, there were 9,938 children involved in divorces and annulments in 2008.

TECHNICAL NOTES

REGISTRATION OF VITAL EVENTS

The vital statistics system in South Carolina is a local-state-national reporting system where the vital event certificates and reports can be submitted to the County Registrar located in the county where the event occurred or submitted electronically depending on the event. There are now electronic systems in place for registration of both births and deaths. The systems allow source document providers (delivering facilities, funeral directors, physicians, coroners, etc.) to enter information regarding the vital event into a web-based electronic system called the Vital Records and Statistics Integrated Information System (VRSIIS). Paper reports that are filed in the county of occurrence are then sent by county vital records staff to the Registration Branch within the Division of Biostatistics (State Office). By law, the Commissioner of Health is the State Registrar and appoints the chief administrative officer of each county health department as the County Registrar. The County Registrar appoints a Deputy County Registrar who carries out the routine functions of registration and certification of vital records at the county level. The State Office performs quality assurance testing on the records and also provides certifications of records for the general public. This office also provides data to the National Center for Health Statistics in cooperation with other states in order to produce national information on vital statistics.

Statewide legislation requiring the registration of births and deaths became effective January 1, 1915. South Carolina was admitted into the National Death Registration Area in 1916 and in the National Birth Registration Area in 1919. After failing to meet the completeness of registration tests, the state was excluded from both in 1925. On the basis of later tests, South Carolina was readmitted into the National Birth and Death Registration Areas in 1928.

Marriage records have been filed with the South Carolina Department of Health and Environmental Control since July 1950. The reporting form prevented the state from being admitted as a Marriage Registration Area (MRA) in the national system until legislation was enacted in 1970 to standardize the reporting form, which enabled the state to be admitted as a MRA in 1971.

Reports of divorces and annulments have been filed with the South Carolina Department of Health and Environmental Control since July 1962. The reporting of these events reached 90 percent completeness in 1971, which enabled the state to qualify as a Divorce Registration Area.

No thorough study of the completeness of fetal death registration in South Carolina has yet been made. While the law requires that the death of any fetus that has advanced beyond the 20th week of gestation or weighs 350 grams or more to be registered, it is believed that registration is notably incomplete. The registration of fetal deaths will continue to improve as the need for these data are shown through health research.

REVISION OF CERTIFICATES

The Office of Public Health Statistics and Information Services revised its certificates of birth certificate, death certificate, report of fetal death and report of induced termination of pregnancy based on standards set forth by the National Center for Health Statistics.

The 1989 revised vital records forms were major departures from the previous revisions (see appendix). While many of the items needed for legal purposes (e.g., name) remained unchanged or slightly modified, there were major and significant changes in the Confidential Information for Medical and Health Use section of the Certificate of Live Birth. Most of the changes represented efforts to clarify items for more complete and accurate data reporting. Other than the increased length of the revised forms, the most obvious change on the Certificate of Live Birth and Report of Fetal Death is the replacement of the open-ended medical items with items having a checkbox format. The concept of checkboxes as a mechanism for capturing information on medical factors is not new. In fact, this format was successfully implemented in several states with the previous revision of the forms. Additionally, the lists of risk factors, complications of labor and/or delivery and abnormal conditions of the newborn are taken from the Hollister Maternal/Newborn Record System, which is widely used in many obstetric offices.

The certificate of birth was revised again in January 2004 (referenced by the National Center for Health Statistics (NCHS) as the 2003 revision). This revision accompanied the implementation of a web-based electronic birth registration system (WebBirth). Substantial changes were made to the medical portion of the certificate, including removal of 'other' check/box items and the addition of section names. Several items were added to address data collection needs and to facilitate the linkage of data sets. Another change was the implementation of standardized worksheets to improve the completeness and quality of birth data.

The certificate of death was revised in January 2005 (referenced by the National Center for Health Statistics (NCHS) as the 2003 revision). The form increased in size from letter size to legal size to accommodate additional items and an expanded check box format for decedent's education, race and Hispanic origin. This revision accompanied the implementation of a web-based electronic death registration system (WebDeath). This was the first electronic death registration system in SC. In previous years, all death certificates were filed using only paper forms.

These revisions to the vital records forms and systems were intended to make the vital statistics system more responsive to public health concerns for high quality data.

ALLOCATIONS OF EVENTS BY RESIDENCE OR OCCURRENCE

With respect to geographic allocation of vital events, the data may be compiled either by place of residence or by place of occurrence.

RESIDENCE DATA are allocated in the place in South Carolina where the person normally resided regardless of where the event occurred. A cooperative system of interstate exchange of transcripts of birth and death records permits events occurring to South Carolina residents in other states to be included in the South Carolina resident tabulations. In these tabulations, births are allocated to the county of the mother's residence and deaths are allocated of the county of residence of the decedent. Since there is no interstate exchange of transcripts of marriage and divorce records, these statistics are limited to those events which occurred in South Carolina.

OCCURRENCE DATA are allocated in the place of South Carolina where the event occurred, regardless of the usual residence of the person involved.

Both residence and occurrence data are useful for different purposes. Occurrence data represent the requirements for hospitals and other facilities. These types of data may help to determine such needs as maternity services, intensive care facilities for newborn babies, or emergency room facilities. Residence data are more properly utilized in measuring the fertility and the incidence of death in the population living in an area.

2008 BIRTH AND DEATH ALLOCATIONS FOR S.C. RESIDENTS AND OCCURRENCES

	BIRTHS			DEATHS		
	Total	White	Black & Other	Total	White	Black & Other
Occurring in S.C.	60,404 *	38,680	21,702	39,352 *	28,469	10,686
Residents	59,853 *	38,303	21,528	38,314 *	27,628	10,497
Non-Residents	551 *	377	174	1,038 *	841	189
Residents of S.C.	63,077 *	40,713	22,321	40,197 *	29,015	10,965
In State	59,853 *	38,303	21,528	38,314 *	2,7628	10,497
Out-of-State	3,224 *	2,410	793	1,883 *	1,387	468

* Includes Unknown Races

NOTE: Events to South Carolina residents on military status outside of the United States are not reflected in these tabulations.

DEFINITIONS OF TERMS

ABORTION: Purposeful termination of pregnancy with intention other than to produce a live born infant or to remove a dead fetus.

FETAL DEATH: Death prior to the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy; the death is indicated by the fact that after such expulsion or extraction, the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. (Definition recommended by World Health Organization in 1950). A fetal death is required to be reported if the fetus has completed or passed the twentieth week of gestation or weighs 350 grams or more. (Weight criteria effective in 1978). Vital Statistics Laws and Regulations 61-19: Vital Statistics, Section 21(a). **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

INFANT DEATH: Death of a live born infant under one year of age.

LIVE BIRTH: The complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. (Definition recommended by World Health Organization in 1950). **Heartbeats are to be distinguished from transient cardiac contractions; respirations are to be distinguished from fleeting respiratory efforts or gasps.**

VERY LOW BIRTH WEIGHT: Very low birth weight is a weight at birth, which is less than 1,500 grams (3 pounds, 4 ounces), regardless of the period of gestation.

LOW BIRTH WEIGHT: Low birth weight is a weight at birth, which is less than 2,500 grams (5 pounds, 8 ounces), regardless of the period of gestation.

MARITAL STATUS ON BIRTH CERTIFICATE:

Unmarried - a birth which occurs to a woman who has never been married or who has been widowed or legally divorced from her husband in excess of 280 days.

Married - a birth, which occurs to a woman who has been married or was married within 280 days from conception.

Paternity acknowledgment - gives authorization to list the name of the father on the birth certificate of a child born to an unmarried mother with written consent of the father and mother by means of an affidavit as required by South Carolina Law, Section 44-63-165. For statistical purposes, paternity acknowledgments are included in the "unmarried" category.

MATERNAL DEATH: Death of a woman whose cause of death is assigned to Complications of Pregnancy, Childbirth, and Puerperium (Tenth Revision ICD A34, O00-O95, O98-O99). If death occurred more than 42 days after termination of pregnancy, the death is not considered to be pregnancy-related and is assigned to codes O96-O97.

MULTIPLE CAUSES OF DEATH: A system of coding all of the medical entities reported on the death certificate.

NATURAL INCREASE: The increase in the population due to an excess of births over deaths for a particular period.

NEONATAL DEATH: Death of a live born infant under 28 days of age.

OCCURRENCE DATA: Data allocated to the place in South Carolina where the event occurred, regardless of the usual residence of the person involved.

PERINATAL DEATH: Death occurring during the perinatal period (i.e. to a live born infant less than 28 days of age or a fetus that has passed the twentieth week of gestation or weighs 350 grams or more).

POSTNEONATAL DEATH: Death of a live born infant 28-364 days of age.

RESIDENCE DATA: Data allocated to the place in South Carolina where the person normally resided, regardless of where the event occurred.

UNDERLYING CAUSE OF DEATH: The disease or injury that initiated the train of morbid events leading directly to death classified and coded according to the International Classification of Diseases (ICD).

INTERPRETATION OF DATA

RACE: Information on race of the mother and father is reported on birth and fetal death certificates, and the race of the decedent is reported on death certificates. Fetal deaths are reported by race of mother. As of 1990, Live Births are reported by race of mother instead of race of child. This change allows South Carolina's birth data to be consistent with the National Center for Health Statistics and other states throughout the United States. The race on reported marriages where the license was issued in South Carolina is by the race of groom and on divorces and annulments granted in South Carolina is by the race of husband. For statistical purposes, the tables in this report are based on the broad classifications of "white" and "black and other". In 2007 blacks make up 94.2 percent of the black and other population of South Carolina.

MULTIPLE RACES: Beginning with the 2000 Census, population information released by the U.S. Census Bureau contained a 'multiple' race category. In order to provide rates by single race category for vital events, the National Center for Health Statistics (NCHS) developed a 'bridging' methodology that would regroup the populations of the 'multiple' race category into standard single race categories. Beginning with 2002, these 'bridged' estimated population data were available for South Carolina. For 2000 and 2001, 'bridged' population data were not available at the time of publication. For these years, the staff of Budget and Control Board and the staff of the Division of Biostatistics and Health GIS, Public Health Statistics and Information Services, SCDHEC jointly developed methodologies that would regroup the population of the 'multiple' race category into standard single race categories.

Beginning with the new 2004 birth certificate multiple races can be checked for the race of both mother and father. Similarly, on the new 2005 death certificate multiple races can be checked for the race of the decedent. A methodology was developed that would regroup the 'multiple race' into standard single race categories. This methodology was developed by NCHS and the bridged race data are returned to the Division of Biostatistics, Public Health Statistics and Information Services for use in statistical analysis.

HISPANIC ORIGIN: Hispanic origin is reported separately from race. Thus a person with Hispanic origin can be of any race. The US Census Bureau began providing population estimates for Hispanics in 2002 which allowed birthrates to be calculated for this group.

PATERNITY ACKNOWLEDGMENT: For statistical purposes, paternity acknowledgments are included in the unmarried category. In 2008 there were 15,139 paternity acknowledgments representing 24.0 percent of the total resident live births and 50.1 percent of all live births to unmarried women in South Carolina.

COMPARABILITY: In order that disease classifications may be consistent with advances in medical science and changes in diagnostic practice, any system for categorizing causes of death must periodically be revised. Major revisions in the International Classification of Diseases (ICD), by which causes of death are classified, occur approximately every ten years, and each decennial revision of the ICD has produced some break in comparability of cause of death statistics. In South Carolina, the Sixth Revision of the ICD was used from 1949-1957; the Seventh Revision for 1958-1968; the Eighth 1969-1978; and the Ninth Revision went 1979-1998; and the Tenth Revision went into effect in 1999.

Prior to 1949, under the first five revisions, cause of death was selected on the basis of priority tables for multiple causes, as set forth in The Manual For Joint Causes of Death. Under the Sixth, Seventh, Eighth, and Ninth Revisions of the International Lists, the cause selected for tabulation has been the "underlying" cause, defined as the "disease or injury which initiated the train of morbid events, leading directly to death." (ICDA, Eighth Revision, 1968, Vol. 1, page xxix).

The introduction of the concept of "underlying" cause in 1949, with the Sixth Revision, resulted in a basic change in classification of death, which seriously affects the interpretation of mortality trends before and after 1949. The Seventh Revision was essentially a clarification of the Sixth

Revision, but the Eighth Revision introduced some major modifications in classification lists and coding procedures. The Ninth Revision also brought some major changes in classification and coding. However, the Tenth Revision introduced some of the most dramatic changes thus far.

In order to make valid comparisons of mortality by cause for events classified by different revisions of the ICD, comparability ratios were developed. Comparability ratios are computed by the National Center for Health Statistics from the results of dual coding of certificates according to the old and the new procedures. Taking the number of deaths classified to a given cause by the Tenth Revision and dividing the result by the number of deaths classified to that cause by the Ninth Revision derived the comparability ratios used with the Tenth Revision. Provisional comparability ratios for the United States as a whole, based on the Ninth and Tenth Revisions, have been developed for a limited number of causes published by the National Center for Health Statistics. Tables are included in the Appendix portion of this report.

RATE CALCULATIONS WITH SMALL NUMBERS: There are variations in all statistics that are the result of chance. This characteristic is of particular importance in classifications with small numbers of events where small variations are proportionately large in relation to the base figure. As an example, small changes in the number of deaths or births in small population areas or in the number of deaths from uncommon causes could result in large changes in these crude rates. For this reason, rates for counties with small populations or other small bases should be used cautiously. In this report, rates are not calculated for places of less than 2,500 population or when the number of events is less than 3 for a particular category, due to the known instability of rates based on small numbers. In the Perinatal Section, 3-year rates are calculated to provide a more stable base for comparison of trends over time.

MEDICAL CERTIFICATION OF DEATH: Only a person authorized by law, usually a physician or a coroner, can make the medical certification of death. Thus, the reliability and accuracy of cause-of-death statistics are, to a large extent, governed by the acumen and ability of the doctor or coroner to make the proper diagnosis and by the care with which the death certificate is completed. It is recognized that death may not result from a single morbid condition. Since 1980, South Carolina medical certifiers have been asked to provide contributing conditions adding to the underlying cause of death information. Nineteen hundred eighty-eight is the first year that multiple cause information was included in this report.

MULTIPLE CAUSE OF DEATH: Cause of death statistics have, for many years, been based only on the underlying cause of death, the single disease or injury that initiated the train of events leading to death or the circumstances of the accident that produced the fatal injury. The underlying cause is selected by a computerized algorithm called the Automated Classification of Medical Entities (ACME) from the ordering of conditions reported by physicians or coroners on the death certificate. Analysis of the underlying cause of death information allows for simplified, consistent reporting of data and provides a means of evaluating the impact of public health initiatives. When more than one cause is reported on the certificate, however, the tabulation of only one cause for mortality statistics may lead to a loss of information on any condition that is an element in the death but that is not selected as the underlying cause of death. Cause-of-death statistics are usually based on the underlying cause of death, a single disease or injury circumstance that initiated the sequence of events leading to death. In this system, each death is assigned one underlying cause of death. However, death certificates provide for the inclusion of more information than the underlying cause of death alone. The immediate cause of death, the antecedent causes giving rise to the immediate cause and other significant conditions contributing to the death may also be entered by the medical certifier. These data provide a way of estimating the impact of significant co-factors contributing to a death and offer a means of utilizing information on causes, such as hypertension, asthma, bronchitis, and diabetes, that are frequently present at death but that are usually not lethal by themselves. Each death is assigned one underlying cause and up to nineteen contributing causes of death.

CLASSIFICATION AND METHODOLOGY IN DETERMINING LEADING CAUSES OF INFANT DEATH: The leading causes of infant mortality in this report are based on the National Center for Health Statistics (NCHS) list of 130 selected causes of infant mortality. The same methodology

used by NCHS to rank the causes of infant death has also been adopted for this report. This change represents an attempt to standardize reporting of South Carolina data to the national model. The broad categories of cause of death used in determining the leading causes of infant death have been subdivided into more specific categories. This change in methodology makes the leading causes of infant death tables in this report not comparable to similar tables in the reports of years prior to 1998.

POPULATION DATA: South Carolina population estimates for 2005 were available from the National Center for Health Statistics (NCHS) for the state as a whole and for each county by age, race, and gender. In order to provide rates for vital records data by single race category, NCHS developed a 'bridging' methodology, which regrouped the population of the Census, designated 'multiple race' categories into single race categories. The 2000 Census was the first nationwide implementation of revised standards requiring federal agencies to offer individuals the opportunity to select one or more races. NCHS population estimates by age and gender category are consistent with corresponding population data provided to the Office of Research and Statistics, South Carolina Budget and Control Board by the US Census Bureau for the state as a whole and for each county. For age groups of 14-17, 15-17, and 18-19 years, it is assumed that the population within the five-year age groups of 10-14 and 15-19 is distributed uniformly throughout these age intervals.

KOTELCHUCK INDEX: The Kotelchuck Index, also called the Adequacy of Prenatal Care Utilization (APNCU) Index, uses two crucial elements obtained from birth certificate data - when prenatal care began (initiation) and the number of prenatal visits from when prenatal care began until delivery (received services). The Kotelchuck Index classifies the adequacy of initiation as follows: pregnancy months 1 and 2, months 3 and 4, months 5 and 6, and months 7 to 9, with the underlying assumption that the earlier prenatal care begins the better. To classify the adequacy of received services, the number of prenatal visits is compared to the expected number of visits for the period between when care began and the delivery date. The expected number of visits is based on the American College of Obstetricians and Gynecologists prenatal care standards for uncomplicated pregnancies and is adjusted for the gestational age when care began and for the gestational age at delivery.

A ratio of observed to expected visits is calculated and grouped into four categories-Inadequate (received less than 50% of expected visits), Intermediate (50%-79%), Adequate (80%-109%), and Adequate Plus (110% or more). The final Kotelchuck Index measure combines these two dimensions into a single summary score. The profiles define adequate prenatal care as a score of 80% or greater on the Kotelchuck Index, or the sum of the Adequate and Adequate Plus categories. (See the graph on the next page.)

The Kotelchuck Index does not measure the quality of prenatal care. It also depends on the accuracy of the patient or health care provider's recall of the timing of the first visit and the number of subsequent visits. The Kotelchuck Index uses recommendations for low-risk pregnancies, and may not measure the adequacy of care for high-risk women. The Kotelchuck Index is preferable to other indices because it includes a category for women who receive more than the recommended amount of care (adequate plus, or intensive utilization).

The Summary of Adequacy of Kotelchuck Index¹

 **Inadequate** - Prenatal care begun after 4th month, or less than 50% of recommended visits. Includes no prenatal care received.

 **Intermediate** - Prenatal care begun by 4th month, and 50% - 79% of recommended visits.

 **Adequate** - Prenatal care begun by 4th month, and 80% - 109% of recommended visits.

 **Adequate Plus** - Prenatal care begun by 4th month, and 110% or more of recommended visits.

¹ Adapted from Kotelchuck M., "An Evaluation of the Kessner Adequacy of Prenatal Care Index and a Proposed Adequacy of Prenatal Care Utilization Index", American Journal of Public Health, 1994, 84(9): 1414-20.

IMPLEMENTATION OF THE INTERNATIONAL CLASSIFICATION OF DISEASES (ICD) 10TH REVISION

The ICD is a classification system developed collaboratively between the World Health Organization (WHO) and 10 international centers so that the medical terms reported by physicians, medical examiners, and coroners on death certificates can be grouped together for statistical purposes. ICD-10 replaces the ICD-9, used with 1979-1998 data.

The purpose of the ICD and of WHO sponsorship is to promote international comparability in the collection, classification, processing and presentation of mortality statistics. New revisions of the ICD are implemented periodically so that the classification reflects advances in medical science.

ICD-10 affects the classification, processing, and presentation of mortality data. Some titles have changed. The total number of categories has doubled as a result of the addition or deletion of terms used to describe diseases or conditions. The transfer of certain diseases from one section to another reflects new discoveries and advances in knowledge on the nature or causes of particular diseases. The addition of separate categories identifies specific diseases or particular complications of diseases that are of growing interest. Additionally, the codes associated with each title have been converted from numeric to alphanumeric entities. The ICD rules for processing mortality data are generally similar but account for some changes observed in mortality statistics.

HOW ICD-10 COMPARES TO ICD-9

The intent of developing new revisions is to incorporate changes in medical knowledge. Compared with ICD-9, the ICD-10 has:

- expanded detail for many conditions (e.g., viral hepatitis has been expanded from ICD-9 code 070, a single 3-digit category, to ICD-10 codes B15-B19, five 3-digit categories)
- transferred conditions around the classification (e.g., hemorrhage has been moved from the circulatory chapter to the symptoms and signs chapter)
- used alphanumeric codes instead of numeric codes (e.g., code for diabetes mellitus was 250 in ICD-9 and is E10-E14 in ICD-10)
- modified coding rules (e.g., the "Old pneumonia, influenza, and maternal conditions" and "Error and accidents in medical care" coding rules have been eliminated)
- modified the tabulations lists (e.g., the US' ICD-10 113-cause list replaces the US' ICD-9 72-cause list)

Assistance in using the ICD-10 can be obtained by contacting the National Center for Health Statistics, Data Dissemination Branch, 6525 Belcrest Road, Room 1064 Hyattsville, Maryland 20782-2003

(301) 458-4636 (voice) (301) 458-4027 (fax)

FORMULAE

Vital statistics data provide better measures of health status when they are related to the size of the population and particularly to the age and sex components of the population. These relationships are usually expressed in terms of rates or percentages. During intercensal years, the validity of vital statistics rates depends upon the accuracy of population estimates.

For the most part, rates presented in this report are crude rates, i.e., the number of events per 1,000 total population. Crude rates are limited for purposes of making comparisons among geographic areas and for changes over time because they ignore characteristics of the population, such as age and sex. Age-adjusted rates or further analyses may be necessary in order to make valid comparisons.

Rates used in this report are calculated as follows:

Cause of Death Rate	= $\frac{\text{Annual number of deaths from a stated cause}}{\text{Population of area}}$	X 100,000
Death Rate (crude)	= $\frac{\text{Annual number of deaths}}{\text{Population of area}}$	X 1,000
Divorce Rate (crude)	= $\frac{\text{Annual number of divorces}}{\text{Population of area}}$	X 1,000
Fetal Mortality Rate	= $\frac{\text{Annual number of fetal deaths}}{\text{Annual number of live births} + \text{Annual number of fetal deaths}}$	X 1,000
General Fertility Rate	= $\frac{\text{Annual number of live births}}{\text{Population of women 15-44 years of age}}$	X 1,000
Birth Rate of Unmarried Mothers	= $\frac{\text{Annual number of unmarried mothers}}{\text{Annual number of live births}}$	X 1,000
Infant Mortality Rate	= $\frac{\text{Annual number of infant deaths}}{\text{Annual number of live births}}$	X 1,000
Live Birth Rate (Crude)	= $\frac{\text{Annual number of live births}}{\text{Population of area}}$	X 1,000
Marriage Rate (Crude)	= $\frac{\text{Annual number of marriages}}{\text{Population of area}}$	X 1,000
Maternal Mortality Rate	= $\frac{\text{Annual number of maternal deaths}}{\text{Annual number of live births}}$	X 10,000
Neonatal Mortality Rate	= $\frac{\text{Annual number of neonatal deaths}}{\text{Annual number live births}}$	X 1,000
Postneonatal Mortality Rate	= $\frac{\text{Annual number of postneonatal deaths}}{\text{Annual number of live births}}$	X 1,000
Perinatal Mortality Rate	= $\frac{\text{Annual number of fetal deaths} + \text{Annual number of neonatal deaths}}{\text{Annual number of live births} + \text{Annual number of fetal deaths}}$	X 1,000
Low Weight Birth Rate	= $\frac{\text{Annual number of live births weighing less than 2500 grams}}{\text{Annual number of live births}}$	X 1,000

Grams Weight Conversion Chart

500 grams or less	=	1 lb. 1 oz. or less
501 - 1,000 grams	=	1 lb. 2 oz. - 2 lb. 3 oz.
1,001 - 1,500 grams	=	2 lb. 4 oz. - 3 lb. 4 oz.
1,501 - 2,000 grams	=	3 lb. 5 oz. - 4 lb. 6 oz.
2,001 - 2,500 grams	=	4 lb. 7 oz. - 5 lb. 8 oz.
2,501 - 3,000 grams	=	5 lb. 9 oz. - 6 lb. 9 oz.
3,000 - 3,500 grams	=	6 lb. 10 oz. - 7 lb. 11 oz.
3,501 - 4,000 grams	=	7 lb. 12 oz. - 8 lb. 13 oz.
4,001 - 4,500 grams	=	8 lb. 14 oz. - 9 lb. 14 oz.
4,501 - 5,000 grams	=	9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more	=	11 lb. 1 oz. - or more

APPENDIX

LIST OF 113 SELECTED CAUSES OF DEATH

Number	Cause of death
	All causes.....
1#	Salmonella infections..... A01-A02
2#	Shigellosis and amebiasis..... A03, A06
3	Certain other intestinal infections..... A04, A07- A09
#	Tuberculosis..... A16-A19
4	Respiratory tuberculosis..... A16
5	Other tuberculosis..... A17- A19
6#	Whooping cough..... A37
7#	Scarlet fever and erysipelas..... A38, A46
8#	Meningococcal infection..... A39
9#	Septicemia..... A40- A41
10#	Syphilis..... A50- A53
11#	Acute poliomyelitis..... A80
12#	Arthropod-borne viral encephalitis..... A83- A84, A85. 2
13#	Measles..... B05
14#	Viral hepatitis..... B15- B19
15#	Human immunodeficiency virus (HIV) disease..... B20- B24
16#	Malaria..... B50- B54
17	Other and unspecified infectious and parasitic diseases and their sequelae A00, A05, A20- A36, A42- A44, A48- A49, A54- A79, A81- A82, A85. 0- A85. 1, A85. 8, A86- B04, B06- B09, B25- B49, B55- B99
#	Malignant neoplasms..... C00- C97
18	Malignant neoplasms of lip, oral cavity and pharynx..... C00- C14
19	Malignant neoplasm of esophagus..... C15
20	Malignant neoplasm of stomach..... C16
21	Malignant neoplasms of colon, rectum and anus..... C18- C21
22	Malignant neoplasms of liver and intrahepatic bile ducts..... C22
23	Malignant neoplasm of pancreas..... C25
24	Malignant neoplasm of larynx..... C32
25	Malignant neoplasms of trachea, bronchus and lung..... C33- C34
26	Malignant melanoma of skin..... C43
27	Malignant neoplasm of breast..... C50
28	Malignant neoplasm of cervix uteri..... C53
29	Malignant neoplasms of corpus uteri and uterus, part unspecified..... C54- C55
30	Malignant neoplasm of ovary..... C56
31	Malignant neoplasm of prostate..... C61
32	Malignant neoplasms of kidney and renal pelvis..... C64- C65
33	Malignant neoplasm of bladder..... C67
34	Malignant neoplasms of meninges, brain and other parts of central nervous system..... C70- C72
	Malignant neoplasms of lymphoid, hematopoietic and related tissue..... C81- C96
35	Hodgkin's disease..... C81
36	Non-Hodgkin's lymphoma..... C82- C85
37	Leukemia..... C91- C95
38	Multiple myeloma and immunoproliferative neoplasms..... C88, C90
39	Other and unspecified malignant neoplasms of lymphoid, hematopoietic and related tissue..... C96
40	All other and unspecified malignant neoplasms..... C17, C23- C24, C26- C31, C37- C41, C44- C49, C51- C52, C57- C60, C62- C63, C66, C68- C69, C73- C80, C97
41#	In situ neoplasms, benign neoplasms and neoplasms of uncertain or unknown behavior..... D00- D48
42#	Anemias..... D50- D64
43#	Diabetes mellitus..... E10- E14
#	Nutritional deficiencies..... E40- E64
44	Malnutrition..... E40- E46
45	Other nutritional deficiencies..... E50- E64
46#	Meningitis..... G00, G03
47#	Parkinson's disease..... G20- G21
48#	Alzheimer's disease..... G30
#	Major cardiovascular diseases..... I00- I78
	Diseases of heart..... I00- I09, I11, I13, I20- I51
49	Acute rheumatic fever and chronic rheumatic heart diseases..... I00- I09
50	Hypertensive heart disease..... I11

LIST OF 113 SELECTED CAUSES OF DEATH-Con.

Number	Cause of death
51	Hypertensive heart and renal disease..... I13
	Ischemic heart diseases..... I20-I25
52	Acute myocardial infarction..... I21-I22
53	Other acute ischemic heart diseases..... I24
	Other forms of chronic ischemic heart disease..... I20, I25
54	Atherosclerotic cardiovascular disease, so described..... I25. 0
55	All other forms of chronic ischemic heart disease..... I20, I25. 1-I25. 9
	Other heart diseases..... I26-I51
56	Acute and subacute endocarditis..... I33
57	Diseases of pericardium and acute myocarditis..... I30-I31, I40
58	Heart failure..... I50
59	All other forms of heart disease..... I26-I28, I34-I38, I42-I49, I51
60#	Essential (primary) hypertension and hypertensive renal disease..... I10, I12
61#	Cerebrovascular diseases..... I60-I69
62#	Atherosclerosis..... I70
	Other diseases of circulatory system..... I71-I78
63#	Aortic aneurysm and dissection..... I71
64	Other diseases of arteries, arterioles and capillaries..... I72-I78
65	Other disorders of circulatory system..... I80-I99
#	Influenza and pneumonia..... J10-J18
66	Influenza..... J10-J11
67	Pneumonia..... J12-J18
	Other acute lower respiratory infections..... J20-J22
68#	Acute bronchitis and bronchiolitis..... J20-J21
69	Unspecified acute lower respiratory infection..... J22
#	Chronic lower respiratory diseases..... J40-J47
70	Bronchitis, chronic and unspecified..... J40-J42
71	Emphysema..... J43
72	Asthma..... J45-J46
73	Other chronic lower respiratory diseases..... J44, J47
74#	Pneumoconioses and chemical effects..... J60-J66, J68
75#	Pneumonitis due to solids and liquids..... J69
76	Other diseases of respiratory system..... J00-J06, J30-J39, J67, J70-J98
77#	Peptic ulcer..... K25-K28
78#	Diseases of appendix..... K35-K38
79#	Hernia..... K40-K46
#	Chronic liver disease and cirrhosis..... K70, K73-K74
80	Alcoholic liver disease..... K70
81	Other chronic liver disease and cirrhosis..... K73-K74
82#	Cholelithiasis and other disorders of gallbladder..... K80-K82
#	Nephritis, nephrotic syndrome and nephrosis..... N00-N07, N17-N19, N25-N27
83	Acute and rapidly progressive nephritic and nephrotic syndrome..... N00-N01, N04
84	Chronic glomerulonephritis, nephritis and nephritis not specified as acute or chronic, and renal sclerosis unspecified..... N02-N03, N05-N07, N26
85	Renal failure..... N17-N19
86	Other disorders of kidney..... N25, N27
87#	Infections of kidney..... N10-N12, N13. 6, N15. 1
88#	Hyperplasia of prostate..... N40
89#	Inflammatory diseases of female pelvic organs..... N70-N76
#	Pregnancy, childbirth and the puerperium..... 000-099
90	Pregnancy with abortive outcome..... 000-007
91	Other complications of pregnancy, childbirth and the puerperium..... 010-099
92#	Certain conditions originating in the perinatal period..... P00-P96
93#	Congenital malformations, deformations and chromosomal abnormalities..... Q00-Q99
94	Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified..... R00-R99
95	All other diseases (Residual)..... D65-E07, E15-E34, E65-F99, G04-G12, G23-G25, G31-H93, K00-K22, K29-K31, K50-K66, K71-K72, K75-K76, K83-M99, N13. 0-N13. 5, N13. 7-N13. 9, N14, N15. 0, N15. 8-N15. 9, N20-N23, N28-N39, N41-N64, N80-N98
#	Accidents..... V01-X59, Y85-Y86
	Transport accidents..... V01-V99, Y85
96	Motor vehicle accidents..... V02-V04, V09. 0, V09. 2, V12-V14, V19. 0-V19. 2, V19. 4-V19. 6, V20-V79, V80. 3-V80. 5, V81. 0-V81. 1, V82. 0-V82. 1, V83-V86, V87. 0-V87. 8, V88. 0-V88. 8, V89. 0, V89. 2

LIST OF 113 SELECTED CAUSES OF DEATH-Con.

Number	Cause of death
97	Other land transport accidents..... V01, V05- V06, V09. 1, V09. 3- V09. 9, V10- V11, V15- V18, V19. 3, V19. 8- V19. 9, V80. 0- V80. 2, V80. 6- V80. 9, V81. 2- V81. 9, V82. 2- V82. 9, V87. 9, V88. 9, V89. 1, V89. 3, V89. 9
98	Water, air and space, and other and unspecified transport accidents and their sequelae V90- V99, Y85
	Nontransport accidents..... W00- X59, Y86
99	Falls..... W00- W19
100	Accidental discharge of firearms..... W32- W34
101	Accidental drowning and submersion..... W65- W74
102	Accidental exposure to smoke, fire and flames..... X00- X09
103	Accidental poisoning and exposure to noxious substances..... X40- X49
104	Other and unspecified nontransport accidents and their sequelae W20- W31, W35- W64, W75- W99, X10- X39, X50- X59, Y86
#	Intentional self-harm (suicide)..... X60- X84, Y87. 0
105	Intentional self-harm (suicide) by discharge of firearms..... X72- X74
106	Intentional self-harm (suicide) by other and unspecified means and their sequelae X60- X71, X75- X84, Y87. 0
#	Assault (homicide)..... X85- Y09, Y87. 1
107	Assault (homicide) by discharge of firearms..... X93- X95
108	Assault (homicide) by other and unspecified means and their sequelae.... X85- X92, X96- Y09, Y87. 1
109#	Legal intervention..... Y35, Y89. 0
	Events of undetermined intent..... Y10- Y34, Y87. 2, Y89. 9
110	Discharge of firearms, undetermined intent..... Y22- Y24
111	Other and unspecified events of undetermined intent and their sequelae Y10- Y21, Y25- Y34, Y87. 2, Y89. 9
112#	Operations of war and their sequelae..... Y36, Y89. 1
113#	Complications of medical and surgical care..... Y40- Y84, Y88

Estimated comparability ratios for 113 selected causes of death
