customers –
from one place**

kaspersky

Why integrate a security solution into your RMM?

92% of MSPs
already use RMM software

63% of MSPs
use RMM to remotely deploy
security software

Faster deployment

It takes no time at all to integrate Kaspersky with your RMM – you'll soon forget how complicated it used to be to roll out security applications across customer endpoints and networks.

Simpler management

Without automation, growing your business isn't as efficient as it could be. You may be wasting a lot of your technicians' time performing routine tasks manually, in multiple windows. Unifying solutions for monitoring and management is key to boosting profitability and reducing overheads.

Deploying Kaspersky security applications

You may be miles away from your customer but it's still easy to take care of their security remotely. Enjoy remote software installation, monitoring and management of customer devices in their network right from your SolarWinds RMM interface.

Kaspersky Integration with SolarWinds RMM allows administrators to install:

- Kaspersky Endpoint Security applications
- Kaspersky Security Center Network Agent

How to automate:

If a device does not have a Kaspersky security application installed, just set a rule to automatically install it on every device added to SolarWinds RMM.

It's easy with SolarWinds RMM's native deployment mechanism.

Managing Kaspersky Security

Rapidly adding services to more clients from sales can be complicated and time consuming – but it's no hassle when you have Kaspersky integrated into your RMM. Each and every technician is capable of managing multiple customers from the centralized dashboard.

Kaspersky Integration with SolarWinds RMM allows administrators to:

- Run a virus scan on devices
- Update the anti-virus database on devices

How to automate:

Create automation rules to continuously check the status of the endpoint agent and trigger actions to enforce an anti-virus database update or a full workstation scan.

For example: Run full scan once a month. Run antivirus database update every N day. Run database update or scan if the devices haven't been scanned for N days, etc.

These rules are fully customizable to suit your preferences.

Faster decision making

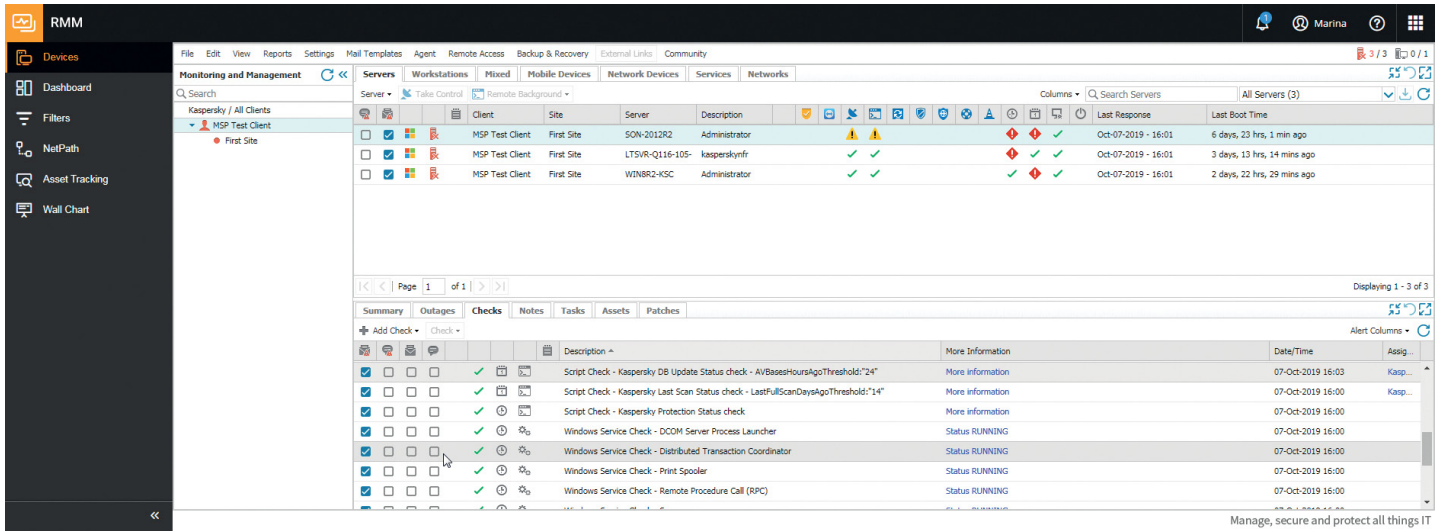

It's so convenient to have a centralized dashboard. You can see the devices you manage, whether an endpoint agent is installed, its status, its version, the time of the last anti-virus database update and the time of the last virus scan. Devices in SolarWinds RMM display the same names as in Kaspersky consoles, so if you see an error message, you can quickly find the problematic device by searching for it in Kaspersky Security Center or Kaspersky Endpoint Security Cloud. It takes very little time and effort to assess the situation and take action.

How to automate:

Using the centralized dashboard you can check to see whether the Kaspersky security application is installed on the workstation, see its status and details including agent version, the last scan and update date. You can also automate infrastructure monitoring with the help of rules that will trigger action.

For example: [Change endpoint status to 'critical'] if [the antivirus database has not been updated for N days]. These conditions and actions are fully customizable to suit your monitoring needs.

How to make it real? Just add a Kaspersky component to your SolarWinds RMM

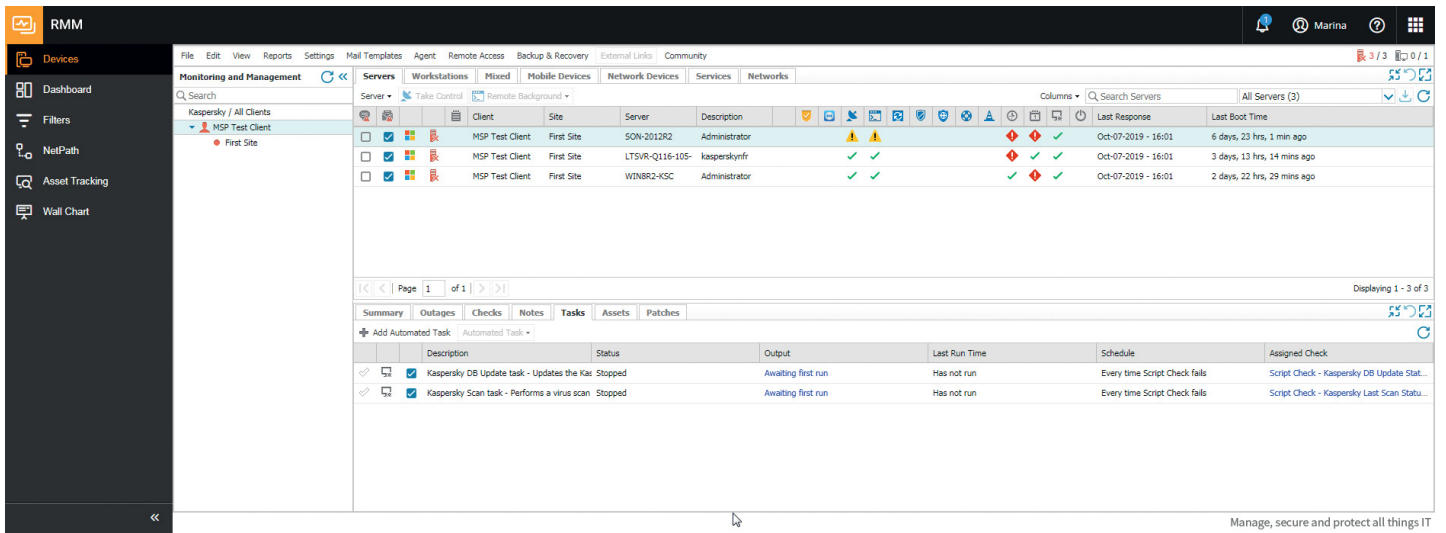

The screenshot shows the SolarWinds RMM interface with the 'Monitoring and Management' section active. A table lists servers and their associated checks. The table has columns for Client, Site, Server, Description, Last Response, and Last Boot Time. The checks listed include Kaspersky DB Update Status, Kaspersky Last Scan Status, Kaspersky Protection Status, Windows Service Check - DCOM Server Process Launcher, Windows Service Check - Distributed Transaction Coordinator, Windows Service Check - Print Spooler, and Windows Service Check - Remote Procedure Call (RPC).

Client	Site	Server	Description	Last Response	Last Boot Time
MSP Test Client	First Site	SON-2012R2	Administrator	Oct-07-2019 - 16:01	6 days, 23 hrs, 1 min ago
MSP Test Client	First Site	LTSVR-Q116-105	kasperskynfr	Oct-07-2019 - 16:01	3 days, 13 hrs, 14 mins ago
MSP Test Client	First Site	WINBR2-KSC	Administrator	Oct-07-2019 - 16:01	2 days, 22 hrs, 29 mins ago
