Bachelor of Science in Information Technology

The Bachelor of Science in Information Technology is designed to produce academically sound and functionally competent IT professionals who can build and deploy networks, databases, web properties, and other IT-related assets. Core programming skills along with problem-solving skills and techniques are offered to help bring you a well-rounded technology education. Additional concentrations allow you to choose from dozens of specific courses in order to specialize in the IT area of interest for you. IT personnel are needed in all industries, and this online bachelor's program helps prepare you for a variety of possible careers including programmer, systems analyst, project manager, web developer, database designer, and more.

Coursework in this program also meets various industry certifications including Certified Internet Webmaster (CIW®). Please view course descriptions for complete details.

CIW® is a registered trademark of Certification Partners, LLC.

Degree Program Objectives

In addition to the institutional and degree level learning objectives, graduates of this program are expected to achieve these learning outcomes:

- Assess the significance of the system development life cycle and its effectiveness.
- Build a software program with software quality and reusability using the principles and concepts of Object-Oriented Programming (OOP).
- Design a network that incorporates the principles of network technologies.
- Design a database that applies the fundamentals of database management systems.
- Analyze the computer and network security issues, policies, proactive measures, and software tools to counter security breaches and threats.
- Apply industry driven techniques for designing, developing, deploying, and securing enterprise applications on the desktop and on the Web.
- Demonstrate use of analytical, logical, and critical thinking to design, develop, and deploy effective Information Technology solutions.

Students must choose a concentration for this degree program and may select from a General Concentration, Concentration in Multitier Architecture Approach, Concentration in Programming, or Concentration in Project Management.

General Concentration Requirements (15 semester hours)

Code	Title	Semester Hours
WEBD221	Intermediate Web Development	3
WEBD241	Web Development Using JavaScript®	3
INFO331	Management Information Systems	3
ISSC422	Information Security	3
ISSC221	Intermediate Computer Systems	3
Total Semester I	Hours	15

Concentration in Multi-tier Architecture Approach (15 semester hours)

The concentration offers an in-depth understanding of a multitier architecture approach to applying more productive skills and techniques when replacing or upgrading independent tiers within a system without impacting other critical layers. You will develop the knowledge and skills used to redevelop or modernize various layers associated with the user interface, business logic, and data storage. You will learn how to optimize front-end web server requirements and address back-end database or data storage concerns efficiently, while maintaining presentation, application processing, and data management functions.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the principles and practices applicable to mutli-tier architecture approach.
- Analyze guidelines and techniques associated with building computer architecture more effectively.
- Design software based on presentation, application and data layer.
- Develop software application functionalities such as HTML, JavaScript®, jQuery®, SQL, Python® and other critical programming languages.
- Apply information technology architecture strategies.

jQuery® is a registered trademark of OpenJS Foundation.

Python® is a registered trademark of the Python Software Foundation.

Concentration Requirements (15 semester hours)

Code	Title	Semester Hours
WEBD221	Intermediate Web Development	3
WEBD241	Web Development Using JavaScript®	3
INFO221	Relational Database Concepts	3
ENTD320	Intermediate Python® Programming	3
WEBD343	jQuery	3
Total Semester	Hours	15

Concentration in Programming (15 semester hours)

The purpose of this concentration is to build a stronger foundation in Object Oriented Programming using Java programming. As the technology field shifts, the curriculum must embrace the changes in technology to appropriately equip students with marketable skills. There has been a substantial growth in application software development as companies seek customized applications to address their requirements. According to the U.S. Bureau of Labor Statistics, employment of computer programmer is expected to grow by eight percent between now and the year 2022. Java is one of the most highly recommended programming languages for students to learn. It serves is a primary language for building mobile apps, games, and enterprise software and works across multiple platforms.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Explain the principles and practices applicable to programming in lava
- Analyze guidelines and techniques associated with object-oriented programming using Java.
- Summarize the growing trends of software development and how it is transforming businesses.
- Apply object-oriented programming using Java programming language.
- Build software programs using Java programming language.

Concentration Requirements (15 semester hours)

Code		nester Hours
ENTD261	Scripting Languages for the Administrator	3
ENTD380	Introduction to Object Oriented Programming with Java®	3
ENTD381	Object Oriented Programming With Java®	3

Total Semeste	er Hours	15
ENTD411	Application Development	3
ENTD481	Enterprise Development using J2EE	3

Concentration in Project Management (15 semester hours)

This concentration addresses the processes and goals of project management. It explores realistic application of project management process using project management strategies, tactics, and software. Other vital concepts and principles, such as negotiation techniques affecting how governments and organizations think about project management, are also examined. This concentration also expands on the processes and goals of negotiation. It explores a basic understanding of negotiation and the fundamentals of reaching an agreement while maintaining mutual gains. It helps you become more effective in delivering win-win agreements and distinguishing the differences between integrative negotiation and distributive bargaining when selecting the appropriate strategy for a project. This concentration builds your skills and abilities to initiate, plan, execute, monitor, control, and close projects. The concentration also focuses on quality delivery and the monitoring of risks in government and private sector contracting and acquisition activities.

Objectives

Upon successful completion of this concentration, the student will be able to:

- Identify the models and strategies of project management.
- Explain the use of project management tools in an organization.
- Interpret the different techniques of project management.
- Apply effective strategies of project management in negotiating.

Concentration Requirements (15 semester hours)

Code	Title	Semester Hours
ITMG221	IT Project Management	3
ITMG222	IT Project Management Using MS Project®	3
HRMT300	Negotiation I	3
