# 211. Overview

# **1.1 Principal activities**

Dell Bank International d.a.c. (the "Bank")<sup>1</sup> was incorporated on 15 August 2011 and is an indirect wholly owned subsidiary of Denali Holdings Inc., incorporated in the United States of America. Prior to 29 October 2013, the ultimate parent company was Dell Inc., which was a publically traded company. On 12 September 2013, the stockholders of Dell Inc. approved the proposal in which Michael Dell, Dell's Founder, Chairman and CEO, acquired Dell in partnership with global technology investment firm Silver Lake Partners. This partnership resulted in the formation of a joint investment vehicle; Denali Holding Inc. Following completion of the transaction, Mr Dell continues to lead Dell as Chairman and Chief Executive Officer and maintains a significant equity investment in Dell. The transaction was closed on 29 October 2013. Since this date, Denali Holding Inc. ("Denali") is the new ultimate parent of Dell Bank International d.a.c.

The principal activity of the Bank is the provision of financing solutions to end users of products and services sold by Dell entities in Europe. This includes leases and loan arrangements, rentals and asset management facilities to all Dell business segments and with third party providers.

Dell acquired the Dell related assets, sales, servicing functions and platform from CIT Vendor Finance Europe. The CIT-owned Dell asset portfolios migrated to the Bank as part of the completion of that acquisition (the "Acquisition").

The Bank provides financial services to customers based in the United Kingdom, Ireland, Belgium, the Netherlands, Luxembourg, Germany, Austria, Switzerland, France, Italy, Spain, Portugal, Demark, Sweden, Finland, Norway, Iceland and Poland. The Bank operates its only branch in Spain. The Bank is regulated by the Central Bank of Ireland ("CBI") and has an Irish banking licence under the Central Bank of Ireland Act 1971 (as amended). The Bank is subject to the CBI's Corporate Governance Code for Credit Institutions and Insurance Undertakings 2013 which imposes minimum core standards upon all credit institutions licensed by the CBI. The Bank is not required to comply with the additional Corporate Governance Code requirements for High Impact designated institutions.

# 1.2 Capital Requirements Regulation & European Directives

The Capital Requirements Directive (CRD IV) and the Capital Requirements Regulation (CRR) were of the EU on 27 June 2013 (Collectively known as "CRD IV"). The CRR had direct effect in EU member states and CRD IV was required to be implemented through national legislation in EU member states by 31 December 2013. The CRD IV legislation is being implemented on a phased basis from 1 January 2014, with full implementation by 2019.

CRD and CRR effectively transposed the Basel III accord into law. The Basel III accord is made up of three Pillars.

- Pillar I sets out the regulatory prescribed rules for calculating the minimum capital requirements covering credit risk, operational risk and market risk.
- Pillar II requires banks to have in place an Internal Capital Adequacy Assessment Process ("ICAAP"), under which banks calculate their own estimate of the capital requirements to cover all material risks. The ICAAP is forward looking and assesses capital adequacy under base and stress scenarios. An institution's ICAAP is subject to supervisory review and evaluation.

<sup>&</sup>lt;sup>1</sup> Since 1<sup>st</sup> February 2016, Dell Bank International Limited changed its name to Dell Bank International d.a.c. This change was required under new Companies legislation in Ireland

• Pillar III requires disclosure to the market of certain qualitative and quantitative information relating to an institution's risk profile and risk management processes.

This document presents the Bank's Pillar III disclosures as at 31 December 2015 as required by the Article 13 of the Capital Requirements Regulation ("CRR").

# 1.3 Distinction between IFRS and Pillar III Quantitative Disclosures

It should be noted that there are fundamental differences in the basis of calculation between financial statement information based on IFRS accounting standards and Basel Pillar 1 information based on regulatory capital adequacy concepts and rules. While some of the Pillar 3 quantitative disclosures based on Basel methodologies may be comparable with quantitative disclosures in the Annual Report 31 December 2015 in terms of disclosure topic covered, any comparison should bear the differences relating to the scope of application and calculations in mind.

The disclosures contained in this document have not been subject to external audit.

# **1.4 Scope of Application**

The Banks regulatory banking licence requires both Dell Bank International d.a.c (solo basis) and the Parent Company, DFS BV, (Consolidated basis) to file regulatory returns with the Central Bank for the purpose of assessing, inter alia, their capital adequacy and balance sheets. In line with CRR requirements under Article 13(2), the risk based figures provided in the below tables are derived from the year end consolidated COREP returns that were submitted to the Central Bank of Ireland.

The Audited Financial Statements are presented at Dell Bank International d.a.c level and therefore scope of application differs to the Pillar III requirements.

DFS B.V.'s sole purpose is to act as a holding company for the Bank. Therefore to reflect the risk profile of the Bank the qualitative information below has been presented on a solo basis.

# 2. Own funds and capital management

# **2.1 Capital Resources**

The Bank is predominantly funded by capital (comprising share capital, capital contribution, subordinated debt and reserves) and an intercompany loan from Dell Global BV which is the parent entity of DFS BV. Dell Inc. has provided and will continue to provide funding to the Bank (subject to any legal or regulatory requirements), to the extent that the Bank:

- Is not otherwise able to comply with the capital and liquidity requirements of CRD IV or the requirements set out by the Central Bank of Ireland, or,
- Requires funding to meet any business or lending commitment as and when they fall due.

The following table sets out the Own Funds of the Bank (see appendix 1 for EBA uniform templates including nature and amounts of the prudential filters<sup>2</sup> and appendix 3 for a reconciliation of the own funds).

### **Regulatory Capital**

| In thousands of Euro                  | 2015     |
|---------------------------------------|----------|
| Tier 1 Capital                        |          |
| Share Capital                         | 50,018   |
| Capital Contribution                  | 217,500  |
| Goodwill                              | -13,226  |
| Intangible Assets                     | -19,415  |
| Deferred Taxation Assets <sup>3</sup> | -1,741   |
| Reserves                              | -67,393  |
| Common Equity Tier 1                  | 165,743  |
| Additional Tier 1                     | <u>.</u> |
| Total Tier 1 Capital                  | 165,743  |
|                                       |          |
| Tier 2                                |          |
| Subordinated Debt                     | 65,000   |
| General Provisions <sup>4</sup>       | 1,728    |
| Total Tier 2 Capital                  | 66,728   |
| Total Own Funds                       | 232,471  |
|                                       |          |
| Risk Weighted Assets                  | 811,042  |
| Total Capital Ratio                   | 28.66%   |

<sup>&</sup>lt;sup>2</sup> Prudential Filters under article 36 of the CRR are; losses for the current year, intangible assets and goodwill.

<sup>&</sup>lt;sup>3</sup> Under the CBI 'Implementation of Competent Authority Discretions and Options in CRD IV and CRR', Section 2 Transitional Arrangements, Deferred Taxation Assets that do not rely on temporary differences are being phased in as deductions from Own Funds.

<sup>4</sup> Under the CBI 'Implementation of Competent Authority Discretions and Options in CRD IV and CRR', Section 2 Transitional Arrangements, IBNR provisions are being phased out from tier 2 eligibility.

During 2015 there was one capital contribution from Dell Inc. amounting to 40,000,000 EUR. Also, during the past year, the Bank has complied in full with all its externally imposed capital requirements.

# **2.2 Capital Instruments**

The subordinated Loan entered into June 2013 bears interest at rates fixed in advance for periods of three months. The subordinated loan agreement was amended on the 15<sup>th</sup> of September 2015 whereby the interest rate has changed from Euro LIBOR plus 560Bps to Euro LIBOR plus 280 Bps. The Bank's dated subordinated notes are repayable in 2023 in full. The Bank has not had any defaults of principal, interest or other breaches with respect to their liabilities during the year. The loan is subordinated to other debt held. The Bank's subordinated debt is issued to DGBV, the parent company of DFS BV.

The following table details the main terms and conditions of the Group's capital instruments. A full description of the main features of the capital instruments is located in Appendix 2

| In thousands of Euro                          | <b>Reference</b> rate | Funding Date | Maturity | 31-Dec-<br>15 |  |  |  |
|---|-----------------------|--------------|----------|---------------|--|--|--|
| Subordinated Loan<br>Accrued interest payable | %<br>3mth Euro Libor  | Jun 2013     | Jun 2023 | 65,000<br>72  |  |  |  |
| Total Subordinated Liabilities                |                       |              |          |               |  |  |  |

# 2.3 Minimum Capital Requirements

The Bank uses the Standardised Approach for the calculation of its Pillar I capital requirements for credit risk. The capital requirements for market risk are calculated in accordance with the Standardised Measurement Method. Operational Risk capital is determined using the Basic Indicator Approach. The following table sets out the minimum capital required of the Bank under CRD IV,

### Risk Capital Held as at 31 December 2015

| In thousands of Euro                  | Pillar I |  |  |  |
|---------------------------------------|----------|--|--|--|
| Credit Risk Exposure Classes          |          |  |  |  |
| Central Governments and Central Banks | 0        |  |  |  |
| Regional Governments                  | 16       |  |  |  |
| Institutions                          | 1,661    |  |  |  |
| Corporates                            | 43,283   |  |  |  |
| Default                               | 1,377    |  |  |  |
| Other Items                           | 11,545   |  |  |  |
| Market Risk                           |          |  |  |  |
| Foreign Exchange Risk                 | 50       |  |  |  |
| Operational Risk                      | 6,796    |  |  |  |
| Credit Valuation Adjustment           | 155      |  |  |  |
| Total Pillar I Capital Requirements   | 64,883   |  |  |  |

The Bank assesses its capital adequacy on a Pillar I basis through the COREP<sup>5</sup> process. The Bank also has in place an Internal Capital Adequacy Process (ICAAP) to assess the adequacy of the Bank's capital in light of supporting current and future activities. The Bank's Asset and Liability Committee ("ALCO") is the primary management committee responsible for the ICAAP which is reviewed and approved by the Risk Committee and Board. The Risk Committee and the Board review and assess the capital needs of the Bank on a regular basis. A key objective of the Bank's Risk Appetite Framework is to meet its minimum regulatory requirements at all times.

## **Capital Buffers**

As per Article 440 of the CRR, the Bank will begin complying with and reporting on additional CRD IV capital buffers <sup>6</sup> from January 2016. The Bank's Internal Capital Adequacy assessment and it's reporting of Pillar I capital requirements will consider the following additional buffer requirements in addition to its current CET1 requirement;

- Capital Conservation Buffer
- Institution Specific Countercyclical Buffer

# **2.4 Capital Management**

The Bank's key objectives with regard to managing capital are:

- To comply with the capital requirements set by the Central Bank of Ireland;
- To safeguard the Bank's ability to continue as a going concern so that it can continue to provide returns for shareholders and benefits for other stakeholders;
- To maintain a strong capital base to support the development of its business.

Capital adequacy and the use of regulatory capital are monitored daily by the Bank's Regulatory function. The Bank holds own funds in the form of capital which will always be more than or equal to the higher of capital charges calculated under Pillar I or Pillar II (ICAAP).

# **2.5 Capital Planning**

A number of different modelling tools are used in the financial and capital planning process. Modifications may be made to models based upon the requirements of the relevant planning or forecast cycle including new regulatory requirements. Refinements in forecasting methodologies as well as changing business dynamics may also result in adjustments to existing and/or creation of new planning models.

Once all the inputs have been finalised a financial plan is reviewed and approved by senior management, ALCO and the Board. Updated forecasts are produced during the year taking account of latest developments and up to date outlook.

The capital plan is based on the Bank's approved financial plan which is sufficiently detailed in terms of asset class, industry sectors, currency breakdowns, and impairments and provisioning to enable a comprehensive view of the capital requirements projections. All key components of the Bank's Pillar I capital adequacy ratio are included in the plan.

<sup>&</sup>lt;sup>5</sup> Common Reporting (COREP) is a standardised reporting framework issued by the European Banking Authority for Capital Requirements Regulation reporting.

<sup>&</sup>lt;sup>6</sup> Article 128 of CRDIV

A capital forecast is presented monthly to the ALCO who review the actual and forecasted performance and recommend if any additional capital is required. The Board also consider the Pillar I capital adequacy position on a quarterly basis.

The ICAAP is aligned with the financial planning process. ALCO reviews and approves the Internal Capital Adequacy Assessment Report which is then presented to the Risk Committee and Board for review and approval.

# 3. Risk management

## Introduction

The Bank's approach to ascertaining and monitoring the primary risks and uncertainties it faces is informed by identified risk. The Bank's operations involve, to varying degrees, the evaluation, acceptance and management of these risks. The risks that the Bank faces are mitigated by the use of controls which form part of the Bank's risk management framework.

Senior management are responsible for the management of risk on a day-to-day basis, under the oversight of the Board. The Bank has implemented a risk culture which promotes transparency and has established a risk governance structure that is supported by an appropriate Risk Management Framework and Risk Appetite, reflecting the size, complexity and risk profile of the Bank.

# **3.1 Risk Framework**

The Board and senior management have designed the Bank's Risk Management Framework and the Internal Control framework to support the Bank's Risk Appetite. Each Framework regards managing risks as an essential part of successfully operating the Bank. Senior Management continually review the operations of the Bank and assess the level of risk in line with the Bank's Risk Appetite, its policies and controls, changes in its products and services, and changes in the market place in which it operates. As required by the CRR<sup>7</sup> and through the approval of this Pillar III report, the Board declares that the risk management arrangements and systems in place are adequate with regard to the Bank's profile and strategy.

## Risk Appetite

The Bank's Risk Appetite is expressed in both qualitative and quantitative terms. The Bank's risk culture is based on the risks that the Bank faces and how they are managed; taking into account it's Risk Appetite. The Bank has defined internal governance structures and arrangements, including an organisational structure with defined lines of responsibility; a Risk Management framework designed to promote sound and effective risk management, including identifying, measuring, monitoring and ensuring the management of the risks to which the Bank is exposed; and an Internal Controls framework designed to support adequate internal control mechanisms.

Material risks are deemed to be those risks which may impact the Bank's ability to deliver on its business plan, service its customers, operate in a legal and compliant manner, impact the Bank's brand and reputation or cause financial loss exceeding Risk Appetite tolerances. Non-material risks are deemed to be those which do not impact the Bank's ability to deliver on its business plan, service its customers, operate in a legal and compliant manner,

<sup>&</sup>lt;sup>7</sup> Article 435 (e) of the CRR

impact the Bank's reputation and brand. Non-material risks may cause financial loss within Risk Appetite tolerances.

The Board, as supported by Senior Management, is responsible for setting the Bank's Risk Appetite and risk tolerance at a level which is commensurate with its business plan, the expectations and requirements of its parent and the Central Bank of Ireland. The key material risks that have been identified are as follows:

- Credit Risk (including Credit Concentration Risk)
- Market Risk
- Funding & Liquidity Risk
- Residual Asset Value Risk
- Operational Risk
- Balance Sheet Measurement (includes Capital Adequacy)
- Reputational Risk
- Regulatory Compliance Risk
- Business & Strategy Risk
- Group Risk

For each material risk the Bank has defined a risk tolerance level, monitoring and reporting metrics and a comprehensive framework for managing risk which includes policies, internal controls and management information. The Bank also monitors other risks which have been determined to be non-material.

#### Three lines of defence model

The Bank utilises a 'three lines of defence' approach to ensure that appropriate responsibility is allocated for the management, reporting and escalation of risks.

A key aspect of implementing a strong Internal Control framework is the first line of defence i.e. the functional business areas and management who are responsible for establishing and maintaining adequate internal control policies and procedures. The Board and Senior Management of the Bank recognise the responsibility of the first line of defence in identifying and managing the risks inherent in the Bank's products, services, activities, processes and systems for which it is accountable. In accordance with the Bank's Risk and Control Self-Assessment framework, functional business areas have primary responsibility for assessing and testing the operational effectiveness of the Bank's controls.

The second line of defence comprises the Risk Management Function, the Compliance Function and the Risk Committee. The second line of defence ensures the appropriate development and maintenance of systems by the first line of defence for effective and efficient operations; adequate control of risks; prudent conduct of business; reliability of financial and non-financial information reported or disclosed (both internally and externally); and compliance with laws, regulations, supervisory requirements and the Bank's internal policies and procedures. The Bank's second line of defence covers the whole organisation and the activities of all business, support and control units, including any outsourced activities.

The third line of defence, provided by Internal Audit, provides independent assurance to management and to the Audit Committee and the Board. It ensures that controls are in place for identified risks, that the controls are appropriately designed and operating effectively, and that the risks are being managed within the Bank's Risk Appetite. The third line of defence reviews the effectiveness of the first and second lines of defence and makes recommendations for improvement as required.

# 3.2 Risk Governance

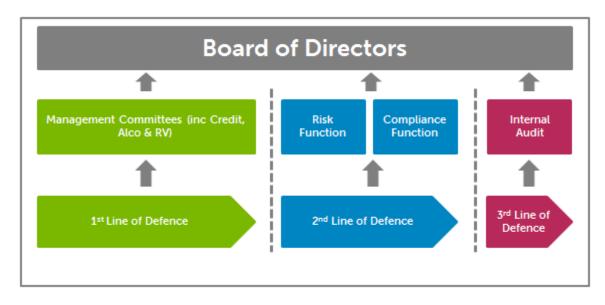

The Bank's organisational structure is designed to promote effective and prudent risk management of the Bank's activities. The mechanisms through which this is achieved include:

- A documented Board Charter which sets out the matters reserved for the Board and a Delegated Authority Matrix;
- Terms of References for all Board Committees\* which set out the decision making authorities and responsibilities of each Committee; Management Committee Terms of References which set out the responsibilities and reporting lines of each Committee;

### Diagram: Oversight and Information flow - Management Committees

The chart below displays the Bank's three lines of defence model.

\* The Board Committees are: Risk Committee, Remunerations and Nominations Committee and Audit Committee as shown in the graph above

### **Board Committees**

The Audit Committee has been delegated responsibility by the Board to provide oversight in respect of the financial reporting process, the quality and integrity of the Bank's financial statements, and internal control framework of the Bank. The Internal Audit function reports to the Audit Committee.

The Remuneration and Nomination Committee is responsible for determining the remuneration policy and framework in compliance with Central Bank of Ireland and European Banking Authority requirements. The Committee has oversight of the Remuneration policy to ensure effective risk management and recruitment of suitable candidates to fill the board and senior management vacancies. The Committee is also responsible for reviewing and approving performance based remunerations and proposed employee share plans.

The Risk Committee of the Bank is responsible for oversight and advice to the Board on the significant risk exposures of the Bank and future risk strategy. The Risk Committee will advise the Board on risk appetite and tolerance for future strategy, taking account of the Board's overall risk appetite, the current financial position of the Bank. The Risk Committee will also oversee the Bank's Risk Management function.

The Bank's Risk Management Function supports the Risk Committee in its activities and responsibilities. Responsibility for risk management policies and risk tolerances lies with the Board of Directors. The Board of Directors has delegated authority to the Risk Committee to take all actions necessary to perform its duties and responsibilities in overseeing risk.

#### **Management Committees:**

The Management Committee is responsible for the overall management of the Bank in accordance with the Board Charter and its Terms of Reference. The Management Committee is charged with identifying and managing the core operating needs of the Bank.

The ALCO is responsible for the management of the balance sheet of the Bank, including capital adequacy in accordance with the risk appetite approved by the Board and the Bank's Internal Capital Adequacy Assessment Process ("ICAAP") framework. The ALCO responsibilities also include establishing and maintaining appropriate procedures for the management of liquidity risk, market risk and contingency funding that are consistent with the strategy and policy approved by the Board.

The Residual Asset Risk Committee of the Bank is responsible for the setting, validation and monitoring of residual asset risk for the Bank. The responsibilities include monitoring adherence to residual asset risk and reviewing strategies and policies regarding setting of Residual Values.

The Credit Committee has been delegated responsibility by the Board to formulate the credit policies and procedures, to oversee the credit administration function and associated credit risk management. The responsibility of the Credit Committee includes monitoring of the quality of credits granted, and considering reviews of the internal credit controls, including the effectiveness of the internal credit function. The Credit Committee is responsible for the overall management of credit exposures of the Bank. Credit exposures include both transactional and commercial credit. The responsibilities of the Credit Committee include establishing and developing the Credit Policy and recommending it to the Risk Committee for approval; implementing the credit authorities' matrix, manual grading/rating methodologies and automated scoring thresholds approved by the Risk Committee. Management Committees meet on a monthly basis.

# **3.3 Board of Directors**

### Appointments to the Board

In assessing a candidate for a Board position with Dell Bank International d.a.c., the Board will bear in mind the predefined criteria which illustrate the skills and attributes desired of candidates for the Board per the various regulatory requirements. This information will also be considered in light of the criteria to assess the knowledge, skills and experience of potential candidates as part of the process for considering whether the candidate is suitable for the role in question in a pan- European, regulated credit institution.

### Composition of the Board

At close of business on 31 December 2015, the Board comprised seven Directors.

### **Cormac Costelloe**

Cormac Costelloe serves as Managing Director for Dell Bank International d.a.c.. In this role, he is responsible for providing Dell customers with financing products that represent an integral part of Dell's customer focused end to end technology offerings.

Before joining Dell, Cormac was Managing Director of CIT Vendor Finance Europe. Over his 20 year career, Cormac's experience is based around leadership roles in credit and business development at a number of leading financial institutions such as ABN-AMRO, ING Barings, Danske Bank and Hewlett-Packard's captive finance bank. Cormac holds a Master's Degree (Hon) In Banking and Finance from the Smurfit Business School and a Bachelor of Commerce from UCD.

Cormac holds no other directorships.

## **Thomas Luttrell**

Thomas Luttrell serves as Executive Director and Chief Financial Officer for Dell Bank International d.a.c. Thomas joined the Board of the Bank in February 2015. In his current capacity, he has responsibility for all Financial functions for the Bank including accounting, financial planning, pricing, treasury, tax, and regulatory reporting. Thomas joined Dell in 2002 and has served in various financial roles in Dell Financial Services and in Treasury and Audit roles for Dell. Prior to moving to the Bank, Thomas was the Assistant Treasurer for Dell Treasury with responsibility for Global Capital Markets activities including debt financing, foreign exchange, interest rate management, liquidity, and investments. Prior to Dell, he was the CFO of a small private company and held various finance and M&A roles at The Associates First Capital and IBM. Thomas holds a BBA from Texas A&M and an MBA from the University of North Texas.

Thomas holds no other directorships.

## **Bill Wavro**

Bill Wavro joined Dell in 2005 and is currently the President of Dell Financial Services. Prior to DFS, Bill served as CFO for the Global Commercial Business and also led the finance teams for the CSMB and SMB business units. He also spent 3 years based in Singapore and was CFO for Dell's APJ business. He joined Dell as Vice President of Product Group Finance where he provided financial support to Dell's R&D, product marketing, and operations organizations.

After graduating from The University of Texas with a degree in Accounting, Bill started his career with Price Waterhouse Coopers in September of 1985. He planned and executed worldwide external and internal audit plans for Fortune 500 clients in a variety of industries with a particular emphasis in Technology. Bill also spent 4 years in Europe with PwC servicing the needs of international clients on US GAAP accounting, statutory reporting, and international tax planning along with audit and consulting services. Bill joined Compaq in 1997 as a controller to help start up and lead Compaq Financial services to what would eventually become a \$2B Financial Services organization. Through a progression of finance roles within Compaq and then HP, he took over the role as CFO of the Personal Systems division of HP in 2003 before joining Dell in 2005. Bill is a Certified Public Accountant in the State of Texas.

Bill holds four other directorship positions within the Dell Inc Group.

## **Tyler Johnson**

Tyler Johnson worked at Dell from 1995 to 2008 and again re-joined Dell in 2013 where he currently serves as Vice President of Treasury. Tyler's world-wide responsibilities include debt financing, capital markets, risk management, cash and investments, customer and supplier financing solutions, and investor relations. Prior to Dell, Tyler served as Vice President and Treasurer for Cooper Industrials, a global manufacturer of electrical products. Tyler's previous roles at Dell include Treasury, Financial Reporting and Analysis, and Internal Audit. After graduating from The University of Texas with a degree in Economics, Tyler started his career with Bank of America as a currency options trader. Tyler joined the Bank first in Los Angeles and later relocated to New York City with short term assignments in Hong Kong and Japan. Tyler left the Bank and joined dell in 1995. Tyler holds an additional six director positions within the Dell Inc Group.

### Frank O'Riordan

Frank qualified as a solicitor in 1976 having previously obtained a BCL and a LLM from UCD. In 1977, he joined A&L Goodbody Solicitors and practiced in Company Law. In 1981, Frank was appointed an equity Partner and ran the New York office for two years. His remit was to develop business in the areas of inward investment in Ireland and M&A activity involving Ireland.

In 1983, he returned to A&L in Dublin as Practice Development Partner. In 1993, he was appointed Managing Partner, A&L Goodbody Solicitors, responsible for managing a practice of approximately 500 staff and maintaining client responsibilities. In 2001, Frank stepped down as Managing Partner. He worked as a consultant for a number of years which included the set-up of Goodbody Consultancy to deal with non-legal consultancy clients from 2001 to 2004.

Frank has 38 years of experience in the legal, banking and financial services sectors in Ireland. Since stepping down from A&L Goodbody in 2001, Frank has joined a number of Boards as a Non-Executive Director particularly in financial services.

Frank currently holds an additional five directorships.

## **Donal Courtney**

Donal qualified with a Bachelor of Business Studies degree from Trinity College and started his career as a trainee Chartered Accountant with Arthur Andersen qualifying with the Institute of Chartered Accountants in Ireland in 1989. In 1990 he was promoted to General Practice Manager in Arthur Andersen. During his time in Arthur Andersen Donal worked primarily with Financial Services clients including Banking and leasing clients.

In 1992, Donal joined Orix Corporation's Irish operations as Financial Director. Orix were principally involved in financial services and aircraft leasing operations. In 1996, he joined Airbus Industries' Irish operations as Chief Financial officer. Airbus were setting up an Irish operation to raise finance for aircraft development and also to set up an entity to acquire and lease second hand aircraft. In 2001, he joined GMAC Commercial Mortgage Bank Europe(GMACCM) as Senior Vice President & Chief Financial Officer for Europe. GMAC CM at this time set up a Bank in Ireland.

In 2009, he was appointed Head of Match Official Performance at the European Rugby Cup Limited and continues to hold this position. Donal has 27 years' experience in financial services, commercial banking and aircraft leasing industries in Ireland and Europe. Since 2009, he has been a Non-Executive Director of UniCredit Bank Ireland where he is Chairman of the Audit committee. Donal holds an additional eight Directorships.

### Don Berman

Don holds a BBA and a MBA from the University of Texas at Austin. His career began with Associates First Capital in 1982 where he held various finance roles before becoming Senior Vice President of Consumer Planning & Analysis in 1990. In 1994, he was SVP of Credit Card Marketing. In 1996 he was promoted to Executive Vice President and Chief Credit Officer for the Credit Card Group. This was followed by General Manager roles in the Retail Private Label and US Bankcard Businesses. Associates First Capital was acquired by Citigroup in 2000.

Don joined Discover Financial Services in 2003 as Senior Vice President and Chief Credit Officer where he led the development of credit strategies, decision models and infrastructure for one of the largest card issuers in the world. He was responsible for Risk Management and Decision Science for \$48 billion credit card portfolio in the U.S. and U.K.

Throughout 2006 and 2007 Don provided various banks and finance companies with consultancy expertise on areas including strategic assessments, expert opinion and customer value management.

Don joined Dell Financial Services (DFS) in 2007 as President and General Manager and held responsibility for the operations and P&L of the \$5.5B captive finance subsidiary of Dell Inc. DFS provides full service lending and leasing capabilities for Dell's consumer, small and medium business, and commercial business segments. Don remained in this role until 2012 and retired from Dell in 2013.

Don does not hold any other Directorship positions.

## **Other Notes**

Colin Keaney stepped down from the Board of Dell Bank International d.a.c. in March 2015.

# **3.4 Diversity and Inclusion**

Diversity and Inclusion is an important business imperative at the Bank. The Bank is committed to achieving a diverse Board of Directors in terms of the required skills, experience, residency requirements, independence, regulatory requirements and Dell Group experience. The Bank has a Board Diversity Policy, which in line with Article 435 CRR has been disclosed at the location <u>http://i.dell.com/sites/doccontent/shared-content/solutions/en/Documents/Dell-Bank-International-Limited-Diversity-Policy-2015.pdf</u>. The Bank aims to have a minimum of twenty (25%) percent females on the Board of Directors as opportunities arise to change composition of the Board. As per the CRR<sup>8</sup> the Bank must disclose the extent to which objectives and targets with regards to diversity are achieved. Progress on achieving the target set out in the Board Diversity Policy is monitored as changes in membership occur.

For the purposes of complying with Regulation 76(5) SI No. 158 of 2014 European Union (Capital Requirements) Regulations 2014, this information is made public on the website of the Bank and the "management body" is the Board of Directors of the Bank.

<sup>&</sup>lt;sup>8</sup> Article 435 (c) of the CRR

# 4. Key Risks

# 4.1 Credit Risk

### Introduction

Credit risk represents a significant risk at the Bank. Credit risk refers to the risk that the Bank's customers fail to meet their scheduled payments for operating leases, finance lease and loans approved by the Bank's credit function in addition to credit risk arising from Treasury activities with other credit institutions such as placing of deposits with counterparties and from the purchase of interest rate and foreign exchange derivatives for economic hedging purposes.

The core values and main procedures governing the provision of credit are laid down in credit policy documents; these have been approved by the Board of Directors and are reviewed regularly.

### **Credit Decision**

The Bank measures credit risk on an individual counterparty basis, utilising either an automated or manual credit underwriting process.

Automated credit decisions are based primarily on customer information obtained from 3rd party credit reporting agencies (Credit Bureau and Fraud databases) and are subject to automated credit-granting rules that utilise mathematically derived and statistically based credit scorecards. An integral part of the credit-granting process is a comprehensive set of management tools and controls that dictate acceptable credit score cut-offs and risk grades.

The Bank requires all customers be graded under the internal grading system, including all new business, renewals of existing credit facilities and periodic reviews of liquidating exposures. Any change in a condition of a customer or a credit facility may have its risk grades reviewed and adjusted accordingly.

The Bank uses a 16 point scale in assigning PD grades of customers. The grades provide an estimate of a customer's Probability of Default within a 12 month horizon. Quantitative and qualitative measures are used to develop a PD grade. The probability of default will increase proportionally as the grade increases. The Bank uses a Loss Given Default ("LGD") scale which expresses the loss on a facility as a proportion of exposure. Quantitative and qualitative measures are used to inform the LGD grade. The percentage of exposure lost given a default scenario increases as the LGD grade increases. Management of credit risk is in accordance with the Capital Requirements Regulation & Capital Requirements Directive collectively known as CRD IV. The Bank applies the standardized approach for calculating credit risk weighted assets and this is embedded in the Bank's daily operational management.

### **Credit Risk Mitigation**

The Bank structures the levels of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, or groups of borrowers, and to geographical and industry segments. Such risks are monitored on a revolving basis and subject to an annual or more frequent review, when considered necessary.

Some other specific control and mitigation measures undertaken by the Bank to mitigate credit risk include the taking of corporate guarantees, personal guarantees, Letters of Credit, Insurance & Self-insurance. In respect of all lease contracts, the Bank retains the title of underlying assets as collateral. In the event of a default the Bank

reserves the right to recover the leased assets. From time to time, the Bank may accept other forms of credit risk mitigants.

#### **Regulatory Credit Risk Exposures**

Management of credit risk is in accordance with the Capital Requirements Regulation & Capital Requirements Directive collectively known as CRD IV. The Bank applies the standardized approach for calculating credit risk weighted assets and this is embedded in the Bank's daily operational management.

### An analysis of the Bank's Credit Risk Assets is set out in the tables below:

#### Credit Risk Assets by Asset Class

| In thousands of Euro   | Pillar I EAD <sup>9</sup> | Average EAD during 2015 |

### Use of External Credit Assessment Institutions ("ECAI's")

For Credit monitoring and decision making the Bank uses Standard and Poor's Ratings Agency external credit assessments where available for Probability of default. Where these ratings are not available the Bank uses an internal ratings scale based on probabilities of default and ultimate loss to derive its own rating.

In respect to COREP capital calculation purposes where a counterparty classed as a credit institution is rated by an ECAI, the Bank seeks the rating to calculate the required Risk Weighting. The Bank uses the Moody's Investor Service and Standard and Poor's Rating Group as its nominated ECAIs for its rated exposures.

In line with the provisions of Article 120 and 136 of the CRR, the ratings are mapped to a Pillar 1 credit quality step, which in turn is mapped to a risk weight.

As per Article 121 (3), where the Bank has exposures to unrated institutions with an original effective maturity of three months or less, the risk weight shall be 20%.

As at 31 December 2015 the exposure classes for which ECAIs are used by the Bank in calculating its Pillar 1 minimum capital requirements are as follows

• Credit and Counterparty Risks and free deliverables - Institutions

The following tables detail the ECAI's association with the Credit Quality Steps and the related Exposure at Default

#### Short Term Exposures (Under 3 months residual maturity)

| In thousands of Euro                             |        |     |     |        |     |      |       |
|--|--------|-----|-----|--------|-----|------|-------|
| Credit Rating                                    | A+     | А   | A-  | BBB+   | BBB | BBB- | BB+   |
| Credit Quality Steps for<br>Short Term Exposures | 2      | 2   | 2   | 3      | 3   | 3    | 4     |
| Exposure At Default                              | 19,848 | 770 | 271 | 23,847 | 57  | 26   | 1,111 |

### Long Term Exposures (over 3 months residual maturity)

| In thousands of Euro                             |     |       |      |
|--|-----|-------|------|
| Credit Rating                                    | А   | A-    | BBB  |
| Credit Quality Steps for Short<br>Term Exposures | 2   | 2     | 3    |
| Exposure At Default                              | 799 | 3,471 | 522. |

#### Impairment

The Bank first determines whether evidence of impairment exists individually for financial assets that are individually significant. If the Bank determines that there is impairment of a particular financial asset then a specific provision is booked against the asset. If the Bank concludes that no specific indication of impairment exists for an individually assessed financial asset it includes the asset in a group of financial assets with related credit risk characteristics and includes these assets under the collective incurred but not reported ("IBNR") assessment. A loan is considered impaired when there is objective evidence of impairment and a specific provision has been recognised in the income statement. Past due is defined as loan/lease contracts where repayment of principal or interest are overdue by at least one day.

The following tables reflect balances Past Due or Impaired.

| In thousands of Euro |       |       | Past  | Due Da | ays  |      |      |          |               |                     |
|----------------------|-------|-------|-------|--------|------|------|------|----------|---------------|---------------------|

|   |          |       |         |
| Provision at 31 December 2015               | 4,207    | 2,469 | 6,675   |

# 4.2 Counterparty credit risks

Counterparty credit risk is the risk that counterparties to derivative contracts will fail to meet their contractual obligations. Counterparty credit risk arises from Treasury activities with other credit institutions including the purchase of interest rate and foreign exchange derivatives for economic hedging purposes.

The Bank uses the Mark-to-Market Method for counterparty credit risk as outlined in Article 274 of the CRR. Under this method the positive replacement cost of a contract is added to the potential future credit exposure of a contract. The potential future credit exposure of a contract is determined by multiplying the notional value by an add-on factor. The add-on factor is determined by reference to the contract type and residual maturity. The Bank also utilises the risk reducing benefits of netting as outlined in Article 298 of the CRR where there are contractual netting agreements in place with counterparties. Netting can reduce the potential future credit exposure. The culmination of the positive replacement cost, potential future credit exposure less netting benefits provides the EAD.

Limits are set for specific tenors on the basis of product type. For the avoidance of doubt, the Bank cannot transact with a Treasury counterparty in the absence of an approved credit limit.

The Treasury counterparty exposure is monitored on a daily basis. On a monthly basis, the Credit function reports the level of exposure for each Treasury counterparty to the Credit Committee. Based on recommendations from the Credit function, the Credit Committee may change the internal rating of a Treasury counterparty if its financial health deteriorates or market conditions change rapidly enough to put the Bank at risk.

It is the responsibility of the Bank's Credit function to establish and maintain the Treasury counterparty Credit Limits in the Bank's systems following the credit approval process. The Credit function reports any material breach of a Treasury counterparty Credit Limit to the Credit Committee.

Breakdown of derivative contracts at 31 December 2015:

| In thousands of Euro                              | FX Derivatives | Interest Rate Swaps |  |  |
|---|----------------|---------------------|--|--|

| Potential Future<br>Credit Exposure               | 7,968          | 1,075               |  |  |
| Netting Benefits /<br>Cash Collateral<br>Received | -4,781         | -645                |  |  |
| Total EAD   | 5,194          | 430                 |  |  |

# 4.3 Market risk - foreign exchange risk

Foreign exchange risk is a financial risk caused by an exposure to unanticipated changes in the exchange rates between two currencies. The Bank is a Euro denominated entity but serves the funding requirements of the leasing business throughout the European Economic Area ("EEA") region and is exposed to currency risk across the following currencies: GBP, CHF, USD, DKK, SEK, NOK and PLN. The Bank has transaction exposure across the non-Euro countries as it has contractual cash flows (receivables and payables) whose values are subject to unanticipated market changes in exchange rates. To realize the euro value of the Bank's foreign denominated cash flows, the Bank runs an FX hedging program.

Resulting from the use of derivative instruments, the Bank is exposed to the risk that counterparties will fail to meet their contractual obligations. To mitigate against this risk the Bank maintains risk limits that correspond to each institution's credit ratings.

FX forwards converting non-Euro cash-flows back to a Euro basis are utilised in order to minimise the Bank's FX risk exposure. The risk framework in place is the same as that for IRRBB where the residual un-hedged P&L exposure is measured against the prescribed limits which are based on a percentage of the Bank's own funds. Periodically, the Bank may choose to obtain funding in Non-Euro currencies and will hedge these drawings accordingly with Foreign Exchange derivatives.

The FX risk management model transforms the net un-hedged position by currency into an implied maximum loss amount. Credit Conversion Factors ("CCF") are utilized to calculate the exposure by currency and maturity profile. The total implied FX loss by currency is then converted to a Euro equivalent base and aggregated. The resulting Euro implied FX loss aggregation is monitored against the Bank's FX loss Target, Trigger and Limit on a daily basis and reported to ALCO monthly.

FX risk was managed in accordance with the Risk appetite framework for the year ended 31 December 2015 and no breaches of the Target or Trigger occurred during this period.

# 4.4 Interest rate risk in the banking book

Interest rate risk is the risk that the Bank will experience deterioration in its financial position as interest rates move over time. The Bank does not take any proprietary positions on the interest rate markets for P&L purposes and therefore only runs non-traded interest rate risk. The Bank's portfolio of non-traded financial instruments principally comprises of commercial finance and operating leases, external loan facilities, capital and hedging instruments.

The main source of this interest rate risk is re-pricing risk, which reflects the fact that the Bank's assets and liabilities are comprised of different maturities and are priced off different interest rate bases. This is the risk that the interest earned on assets and paid on liabilities will change by different amounts if interest rates change owing to differences in the re-pricing characteristics of those assets and liabilities. The extent of the risk depends on the scale of the re-pricing maturity mismatches on the Bank's balance sheet.

Non-traded interest rate risk is calculated on the basis of establishing the re-pricing risk ladder. The majority of asset and liability balances are profiled out by contractual maturity or re-pricing date. Non-financial asset and liabilities (mainly comprised of operating leases, the Bank's capital and reserves) are spread evenly across the risk ladder over medium and longer term maturities.

IRRBB exposures are primarily identified through the use of the Committee of European Banking Authority ("EBA") Interest Rate Risk stress scenario based on a 200bps upward yield curve shock. The EBA guidelines provide the maturity bucket percentage weightings and the residual un-hedged risk position is then measured against prescribed risk limits.

The result of this stress test is as follows:

### The Non Traded Interest Rate Risk position during the course of the reporting period was:

|   | 2015  |
|---|-------|
|   | €'000 |
| 200bps upward shock stress scenario as at 31 December 2015  | 1,530 |
| Average 200bps upward shock stress scenario for the reporting period 1 January 2015 – 31 December 2015    | 1,036 |
| Maximum 200bps upward shock stress scenario during the reporting period 1 January 2015 – 31 December 2015 | 2,140 |

IRRBB is monitored on a daily basis and the positions are reported at the monthly ALCO meeting. As the Bank is a Euro denominated entity providing funding for its non-Euro denominated business primarily in Euro and with the

FX hedging program ensuring cash-flows convert to Euro base currency, risk positions are managed and monitored on a Euro basis.

The Bank also uses an undiscounted PV01<sup>11</sup> metric as a means of interest rate risk management. The PV01 measures the P&L impact of a one basis point shift in the yield curve on the Bank's risk exposure.

Both EBA and PV01 metrics are used to determine the level of hedging required. The Bank maintains a Euro based interest rate swap portfolio to mitigate its interest rate risk exposure.

Interest Rate risk was managed in accordance with the Risk appetite framework for the year ended 31 December 2015 and no breaches of the Target or Trigger occurred during this period.

# 4.5 Liquidity risk

Effective liquidity risk management is central to the building of a strong and solid balance sheet and is a key pillar in the Bank's core strategy.

Liquidity risk is the risk that the Bank is unable to meet it's on and off balance sheet obligations when they fall due without incurring significant costs. Liquidity risk is highly dependent on the Bank's balance sheet characteristics such as the maturity profile of the assets and liabilities, the quality of its liquidity buffer, broader market conditions and access to sufficient market funding.

Outflows include payments made to affiliates and Value Added Resellers, on the origination of lease contracts, cash requirements from contractual commitments, inter-bank deposits being withdrawn or other cash outflows, such as significant operating expenditure or debt maturities. Such outflows would deplete available cash resource.

The Bank's assets are comprised primarily of lease and loan obligations. These loans have short to medium term contractual repayment profiles (typically 3 year amortisation schedules) although the credit agreements allow the lessor in general to repay at will. In aggregate, such a pool of assets will have a reasonably predictable repayment profile, though one that is still variable and that may vary systematically based on a variety of market and macroeconomic factors.

The Bank has a robust and comprehensive policy for assessing, measuring and managing liquidity risk. The ALCO is responsible for defining and approving the Bank's liquidity policy in accordance with the broader Risk Policies established by the Risk Committee.

The Bank's Liquidity Policy will reflect CRD IV requirements and the Central Bank of Ireland's requirements for the Management of Liquidity Risk. The liquidity risk framework is subject to internal oversight, challenge and governance. The ALCO has primary responsibility and reports to the Board Risk Committee. Liquidity risk is also monitored by the control functions as appropriate.

<sup>&</sup>lt;sup>11</sup> **PV01** is the change in present value of an asset or liability for a 1 basis point change in the nominal yield curve used to value the asset or liability

### a) Stress Testing

The strength of the Bank's liquidity risk management is evaluated based on its ability to survive under stress. Effective management of liquidity involves assessing this potential mismatch under a variety of stress scenarios. Stress testing is used to help inform a broader understanding of liquidity risk as well as to model specific liquidity risk events.

The Bank actively monitors a range of market and firm specific indicators on an on-going basis which are designed to act as early warning indicators that liquidity stresses are emerging. The stresses will apply a range of behavioural assumptions to the performance of the asset and liability products. Scenarios include assumptions about significant changes in key funding sources, credit ratings, contingent sources of funds and political and economic conditions. The Bank is expected to be able to withstand these stressed conditions through its own resources. Simulated liquidity stress testing is carried out regularly and reflects the impact of firm specific and market related scenarios on the adequacy of the Bank's liquid resources.

## b) Liquidity Monitoring

The Treasury function is responsible for the daily management of the liquidity buffer, monitoring and reporting of the Bank's liquidity position in accordance with the Liquidity Policy. The Liquidity Coverage Ratio ("LCR") as prescribed in the Basel III accord is internally modelled and monitored by the Bank and includes Target, Trigger and Limit parameters. The Bank complies with the Liquidity Coverage Ratio (LCR) as specified by the regulations<sup>12</sup>. As per the CRR and EBA regulatory guidelines, from October 2015 the Bank began reporting the LCR ratio calculation template on a monthly basis to the Central Bank of Ireland. As at December 2015 the Bank's reported LCR was 295%. This is in excess of the regulatory requirement for 2015 of 60%. This requirement is being phased in over the next number of years in to reach a maximum of 100% in 2019. The requirement in 2016 is 70%.

The Net Stable Funding Ratio is also monitored and modelled by the Treasury function. The Bank is also internally considering the implications of the pending Additional Liquidity Monitoring Metrics reporting requirements. These requirements will support the Bank's analysis of its liquidity position.

The Treasury function reports the results of the Idiosyncratic Scenario to the ALCO members on a daily basis. The liquidity position, compliance and policy are further monitored by the Risk Management function.

Any breach or material deterioration of these metrics would set in motion a series of actions and escalations.

The Bank sources funds from five principal sources:

- Initial contributed equity and retained earnings
- Affiliate borrowings
- External Loan facilities
- Interbank/Corporate Deposits
- Unsecured funding

The mix of the above sources is intended to provide the Bank with a diversified and stable funding base.

<sup>&</sup>lt;sup>12</sup> COMMISSION DELEGATED REGULATION to supplement Regulation (EU) 575/2013 with regard to liquidity coverage requirement for Credit Institutions

### c) Assets held for Managing Liquidity Risk

The Bank holds a portfolio of cash and money market placements to manage its liquidity profile. Liquid assets are assets which can be quickly and easily converted into cash without incurring significant loss. The Bank's assets held for managing liquidity risk comprise of:

- Cash
- Short term bank placements
- Overnight placement with the CBI as an eligible High Quality Liquid Asset for the purpose of supporting management of the Bank's LCR regulatory requirement.

These assets in aggregate are permitted to comprise up to 100% of the Bank's liquid asset holdings.

### d) Derivatives

The Bank does not have any Credit Support Annexes ("CSAs") in place on its derivative portfolio and is therefore not subject to collateral calls.

#### e) Liquidity Risk – Off Balance sheet items

The following items are listed as off balance sheet items at the financial year end:

- Residual value guarantees
- Lease and loan commitments to extend credit

#### f) Internal Liquidity Adequacy Assessment Process (ILAAP)

The Bank is currently considering the implications of the draft regulatory guidelines on the Internal Liquidity Adequacy Assessment Process (ILAAP). The Bank's ILAAP will consider and include the following areas;

- Liquidity Coverage Ratio Reporting
- Liquidity risk assessment
- Inherent funding risk assessment
- Liquidity and Funding risk management assessment

# 4.6 **Operational risk**

The Bank faces operational risks in the regular conduct of its day to day business objectives. Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. Sources of operational risk include internal fraud; external fraud; employment practices and workplace safety; clients, products, and business practices; damage to physical assets; business disruption and system failures; and execution, delivery and system failures.

The Bank's Operational Risk management framework exists to mitigate against such risks. The Operational Risk management framework is structured in a three tier environment comprising; identification and assessment, monitoring and reporting; and control and mitigation.

Operational risk specifically arises in the areas of:

- Business continuity
- Change management

- People
- Internal controls
- Information technology
- New product development
- Outsourcing

The Bank uses a range of tools to identify, assess and manage operational risk such as: business process mapping, risk and control assessments and testing, key risk indicator and key performance indicator reporting and assessments, and internal loss data, errors and control failure reporting.

Allocation of clear responsibilities for operational risk management ensures that risks are identified, monitored, managed and mitigated, in line with the Bank's risk appetite.

The Bank uses the Basic Indicator Approach (BIA) to calculate operational risk capital requirements under Pillar I. Under the BIA the capital requirement for operational risk is 15% of the three year average of gross income as defined by Article 315 of the CRR. As the Bank has not been operating for three years, forecasts of gross income for future years will be used until such time as sufficient historical data is available.

# 4.7 Residual asset value risk

Residual value risk is the risk that the realisation based residual value set at the start of a lease is not achieved at the end of the lease. This may be due to a number of factors, including lower than expected equipment resale value, changes in customer behaviour or higher fulfilment costs and/ or end of lease operating expenses. The Bank seeks to minimise losses arising from residual value risk by understanding the equipment leased, identifying long-term customer behaviour and applying expert judgement when applying residual values in order to provide a balanced view of expected realisation.

The Bank's Asset Management End of Lease ("EOL") function utilises analysis on historic remarketing, renewal and extension data to determine the average end of lease recovery. The function utilises knowledge and the global experience of Management to apply expert judgement to the historically achieved remarketing values to derive Recovery Based Residuals ("RBR").

The Residual Asset Risk Committee is responsible for the setting, validation and monitoring of the residual risk for the Bank. The Bank has established internal controls, with defined limits and regular reporting for residual value risk exposures within and across its portfolios.

# 4.8 Other risks

### a) Balance Sheet Measurement

Capital adequacy is assessed under the Banks ICAAP framework. The treasury function manages the Bank's capital strategy under the guidance of the Board. The Bank is committed to maintaining its sound capitalisation. The Bank has equity share capital of  $\notin$  50m and capital contributions received of  $\notin$  217.5m at 31 December 2015.

The Bank's objectives when managing capital are:

- To comply with the Pillar I and Pillar II capital requirements set by the Regulator
- To safeguard the Bank's ability to continue as a going concern so that it can continue to provide returns for shareholders and benefits for other stakeholders
- To maintain a strong capital base to support the development of its business
- To meet the financial covenant on our revolving credit facility

Capital adequacy and the use of regulatory capital are monitored daily by the Bank's Regulatory function. The Bank has considered the capital and other related requirements which will apply to it through the following key legislation and requirements:

- CRD IV
- Relevant EBA technical standards
- The CBI Pillar II capital assessment
- Central Bank's Licensing and Supervision Standards and Requirements
- Banking Recovery and Resolution Directive (BRRD)

The Bank holds own funds in the form of capital which will always be more than or equal to the higher of capital charges calculated under Pillar I or Pillar II.

The Bank monitors a range of ratios which have been set at, or in excess of its minimum regulatory requirements and are designed to reflect the Bank's risk appetite. This takes into consideration the impact of CRD IV phasing arrangements. The ratios provide a mechanism to monitor compliance and include early warning triggers to allow management to take appropriate timely action should the Bank approach a limit. Per the terms of the license with the Central Bank of Ireland, the Bank has committed to maintain a solvency ratio that is in excess of the minimum required under CRD IV.

The Bank must comply with the 2014 Banking Recovery and Resolution Directive (BRRD) and any supplementary regulation, associated EBA guidelines and standards that are issued as part of its implementation,. The purpose of the BRRD is to establish a framework for the recovery and resolution of institutions which are failing or likely to fail. Under the BRRD the Bank must prepare and submit (on at least an annual basis) a Board approved Recovery plan to the CBI. The Bank must also provide information to the CBI to enable the preparation of a Resolution plan for the Bank.

The Bank did not breach any external capital ratios during the current or prior year.

#### b) Regulatory Risk

Regulatory risk is the risk to earnings, capital and reputation arising from non-compliance with banking regulations, anti-money laundering, data protection, and other associated requirements. Upstream risk is the risk arising from a new regulatory measure that the Bank is currently unaware of or from regulations becoming applicable due to a change in the nature or scope of the Bank's activities. The Bank has zero appetite for censure from regulatory, political or legislative bodies.

### c) Reputational Risk

Reputational Risk is the risk to the Dell brand, or goodwill exhibited towards that brand, by the Bank's customers and wider market. Reputational risk includes social, ethical and environmental risks for the purpose of this Framework.

The Bank will not enter into activities that will knowingly give rise to reputational risk issues that will materially damage the Dell brand. The Bank seeks to ensure that outsourced activities meet the Bank's reputational risk standards, including the treatment and disposal of hardware

### d) Business & Strategy Risk

Business & Strategic Risk arises from adverse and unexpected changes in income, costs or profitability that are due to the Bank's business model, its strategy, and decisions made by Board and senior management. The Bank considers effective governance to be the most appropriate mitigant against this risk category. Business & Strategic Risk is included in the ICAAP assessment.

### e) Group Risk

Group Risk arises from reliance on Dell Inc. for financial and operational support, including funding and outsourced activities. Group risk includes the risk of negative impact on the Bank from other Group entities which may disrupt outsourced activities of the Bank, or may impact the Bank's ability to operate effectively. The Bank considers effective governance to be the most appropriate mitigant against this risk category. Group Risk is included in the ICAAP assessment.

# **5. Encumbered Assets**

An asset should be treated as encumbered if it has been pledged or if it is subject to any form of arrangement to secure, collateralise or credit-enhance any on-balance-sheet or off-balance-sheet transaction from which it cannot be freely withdrawn (for instance, to be pledged for funding purposes).

The Bank has a third party Collateralised Loan Agreement (CLA) in place since 2014. The CLA facility was €600m as at 31 December 2015. This was extended from €340m during 2015. There was €389.5m drawn on the Facility as at 31<sup>st</sup> December 2015; with €440m of encumbered receivables. The following table splits the Bank's balance sheet by asset type and encumbered and unencumbered assets.

#### Encumbered and unencumbered assets as at 31 December 2015:

|                                     | Carrying amount of encumbered assets | Fair value of encumbered assets | Carrying amount of unencumbered assets | Fair value of unencumbered assets |
|-------------------------------------|--------------------------------------|---------------------------------|--|-----------------------------------|
| In thousands of Euro                |                                      |                                 |  |                                   |
| Assets of the reporting institution | 439,788                              |                                 | 463,420                                |                                   |
| Equity instruments                  |                                      |                                 |  |                                   |
| Debt securities                     |                                      |                                 |  |                                   |
| Other assets                        | 439,788                              |                                 | 463,420                                |                                   |
|                                     |                                      |                                 |  |                                   |

### Liabilities associated with encumbered assets as at 31 December 2015

| In thousands of Euro                              | Matching liabilities, contingent liabilities or securities lent | Assets, collateral received and own<br>debt securities issued other than covered bonds<br>and ABSs encumbered |  |  |
|---|---|---|--|--|
| Carrying amount of selected financial liabilities | 389,500 <sup>13</sup>   | 439,788   |  |  |

<sup>&</sup>lt;sup>13</sup> Carrying amount of matching liabilities refers to the amount drawn by DBIL on the collateralised loan.

# 6. Leverage

The Basel III leverage ratio is designed to restrict the build-up of leverage in the Banking sector. It is a simple, non-risk-weighted measure.

The leverage ratio is calculated as <u>Tier One Capital/Total Exposures</u>. As at December 2015 total Exposures of the Bank consist of;

- On-balance sheet exposures
- Derivatives exposures at replacement cost plus an add-on for potential future exposure;
- Off-balance sheet items (Committed Facilities and Guarantees).

While the ratio is not going to be binding until 2018<sup>14</sup>, Dell Bank International d.a.c. is complying with its obligation to publicly disclose its leverage ratio from 2015.

Appendix 4 contains the full leverage ratio disclosure template completed for the Bank as at December 2015.

The Leverage Ratio as at December 2015 is 18.98%.

#### Process used to manage the risk of excessive leverage

The Bank does not engage in proprietary trading and only engages in derivatives for the purpose of hedging interest rate and foreign exchange risk. The Bank is well capitalised and has a sizeable capital surplus in excess of the regulatory minimum as at December 2015. The Bank's Risk function ensure that all activities in the Bank are within the ranges specified in the Bank's risk appetite statement. The Leverage Ratio is one of the suite of key internal risk indicators and is monitored on a monthly basis by the Bank's Risk function. The Bank's primary business is leasing, The Bank borrows funds with the sole intention of facilitating growth in its business. The Bank's funding base primarily consists of private secured funding and intergroup borrowing. Liquidity in the Bank is managed with a focus on maturity transformation of cash flows.

### Factors that had an impact on the leverage ratio during 2015

The Bank's balance sheet grew by 30.69% in year 2015. This represents a growth of 212m EUR in Assets. The other primary factor that impacted the Leverage Ratio during the year was a capital contribution of 40m EUR which the Bank received from Dell Inc.

<sup>&</sup>lt;sup>14</sup> As per European Commission <u>http://europa.eu/rapid/press-release\_MEMO-14-580\_en.htm</u>

# 7. Remuneration disclosures

The Bank's strategy with regards to remuneration of employees and members of the Board of Directors is to attract, retain and motivate the talent needed to drive the growth of the business. The Bank executes this strategy by: providing market-competitive base and incentive pay; motivating performance toward key company objectives; and supporting and enhancing our strong meritocracy – the Bank values accountability and seeks to reward team and team members who continually improve their capability and increase their contribution.

The Bank's approach to remuneration includes the following factors: the Bank's business strategy and business plan performance; the performance of the Dell Group; market factors; Dell Group governance and standards, including group remuneration policies and standards; and applicable regulatory requirements & standards.

# 7.1 Remuneration components

The Bank's remuneration components are derived from the individual job role, including responsibility and job complexity, performance and benchmarking to relevant market data, pay and conditions. The key remuneration components include: base pay remuneration; performance-based remuneration; pension scheme; other benefits; and severance schemes.

## Base pay remuneration

Base pay or "fixed" remuneration is determined primarily by the job role definition, employee individual performance and external market benchmarking.

### Performance-based remuneration

Performance-based or "variable" remuneration is awarded in a manner which promotes sound risk management and does not induce excessive risk-taking while maintaining an appropriate balance of fixed and variable remuneration.

Performance based remuneration also takes account of the Bank's business plan performance and that of the performance of the Dell Group, including modifiers or a percentage multiplier which reflects performance of , the Dell group and individual performance.

It is to be noted that variable compensation may not be payable in full or in part on the basis of unsustainable results.

# 7.2 Identified Staff

Identified Staff are defined as those individuals whose professional activities have a material impact on the Bank's risk profile. The Remuneration and Nominations Committee shall be responsible for determining those groups, categories of employees or individuals that fall within the definition of Identified Staff.

In determining those individuals to be included as Identified Staff the Remuneration and Nominations Committee will at a minimum consider the following staff members;

- Executive members of the Bank's corporate bodies
- Senior management with responsibility for day-to-day management
- Staff with responsibility for independent control functions
- Other risk takers
- Staff whose total remuneration is in the same bracket as senior managers and risk-takers

The following roles were deemed identified staff as at December 31<sup>st</sup> 2015:

- Directors of the Bank
- Managing Director
- Chief Financial Officer
- Chief Risk Officer
- Chief Credit Officer
- Chief Compliance Officer
- Legal Director
- Treasurer
- Head of Internal Audit
- Chief Information Officer
- Operations Director
- Branch manager
- Marketing Director
- Business Excellence Director
- Business Development Director

The process for determining the identification staff who have a material impact on the institution's risk profile is carried out on an annual basis, or as required. It takes into account the qualitative and quantitative identification criteria set out in the EBA Regulatory Technical Standard on identified staff. The Chief Risk Officer is responsible for carrying out the Identified Staff assessment. The results are presented to the Remuneration and Nominations Committee for their review and recommendation to the Board for approval.

Aggregate quantitative data on remuneration for those members of staff in employment as at 31 December 2015 and whose professional activities are considered to have a material impact on DBIL's risk profile are detailed below;

| In thousands of Euro                          | Finance &<br>Management | Control<br>Functions | Operations and<br>Other | Total     |
|---|-------------------------|----------------------|-------------------------|-----------|
| Total Fixed Remuneration                      | 899,378                 | 615,805              | 698,731                 | 2,213,914 |
| Total Variable Remuneration                   | 642,982                 | 192,204              | 277,089                 | 1,112,274 |
| Ratio between fixed and variable remuneration | 71%                     | 31%                  | 40%                     | 50%       |

The Bank is compliant with the remuneration ratio requirements as set by CRR and CRD. As per article 94 (1) (g) (i) of the CRD, the variable component shall not exceed 100% of the fixed component of the total remuneration for each individual. It is noted that the Bank has adhered to the conditions set out in article 94 (1) (g) (ii) of the CRD which allows for the ratio to be increased to 200% for individuals.

| In thousands of Euro       | Senior Management | Other   |
|----------------------------|-------------------|---------|
| Number of Identified Staff | 12                | 1       |
| Total Fixed Remuneration   | 2,069,967         | 143,947 |

#### Variable Remuneration

| Total Variable Remuneration1,097,40214 |
|--|
|--|

#### Remuneration over €1m

During the course of 2015, no individual members of staff designated as identified staff received remuneration over €1 million.

#### **Sign-On Bonuses**

There was one instance of a sign-on bonus paid out during 2015 to identified staff.

#### **Severance Payment**

During the course of 2015, there were no instances of severance payments to individuals designated as identified staff.

### 7.3 Remuneration Governance

The Board of Directors is the ultimate decision making body for the Bank. It has delegated certain responsibilities to the Bank's Remuneration and Nominations Committee. This committee meets at the same frequency as the main Board. In general the Bank implements the Remuneration Policies and practices of the Dell Group with the oversight of the Remuneration Committee and the Board of Directors. Board directors that are not part of Dell Group receive a fixed annual fee. Directors employed by the Dell Group receive no fee for Board membership.

The Bank's remuneration policy is reviewed by the Remuneration & Nominations Committee and recommended to the Board for approval on an annual basis.
